The Muon Storage Ring Design

MUTAC Meeting June, 15th+16th '00

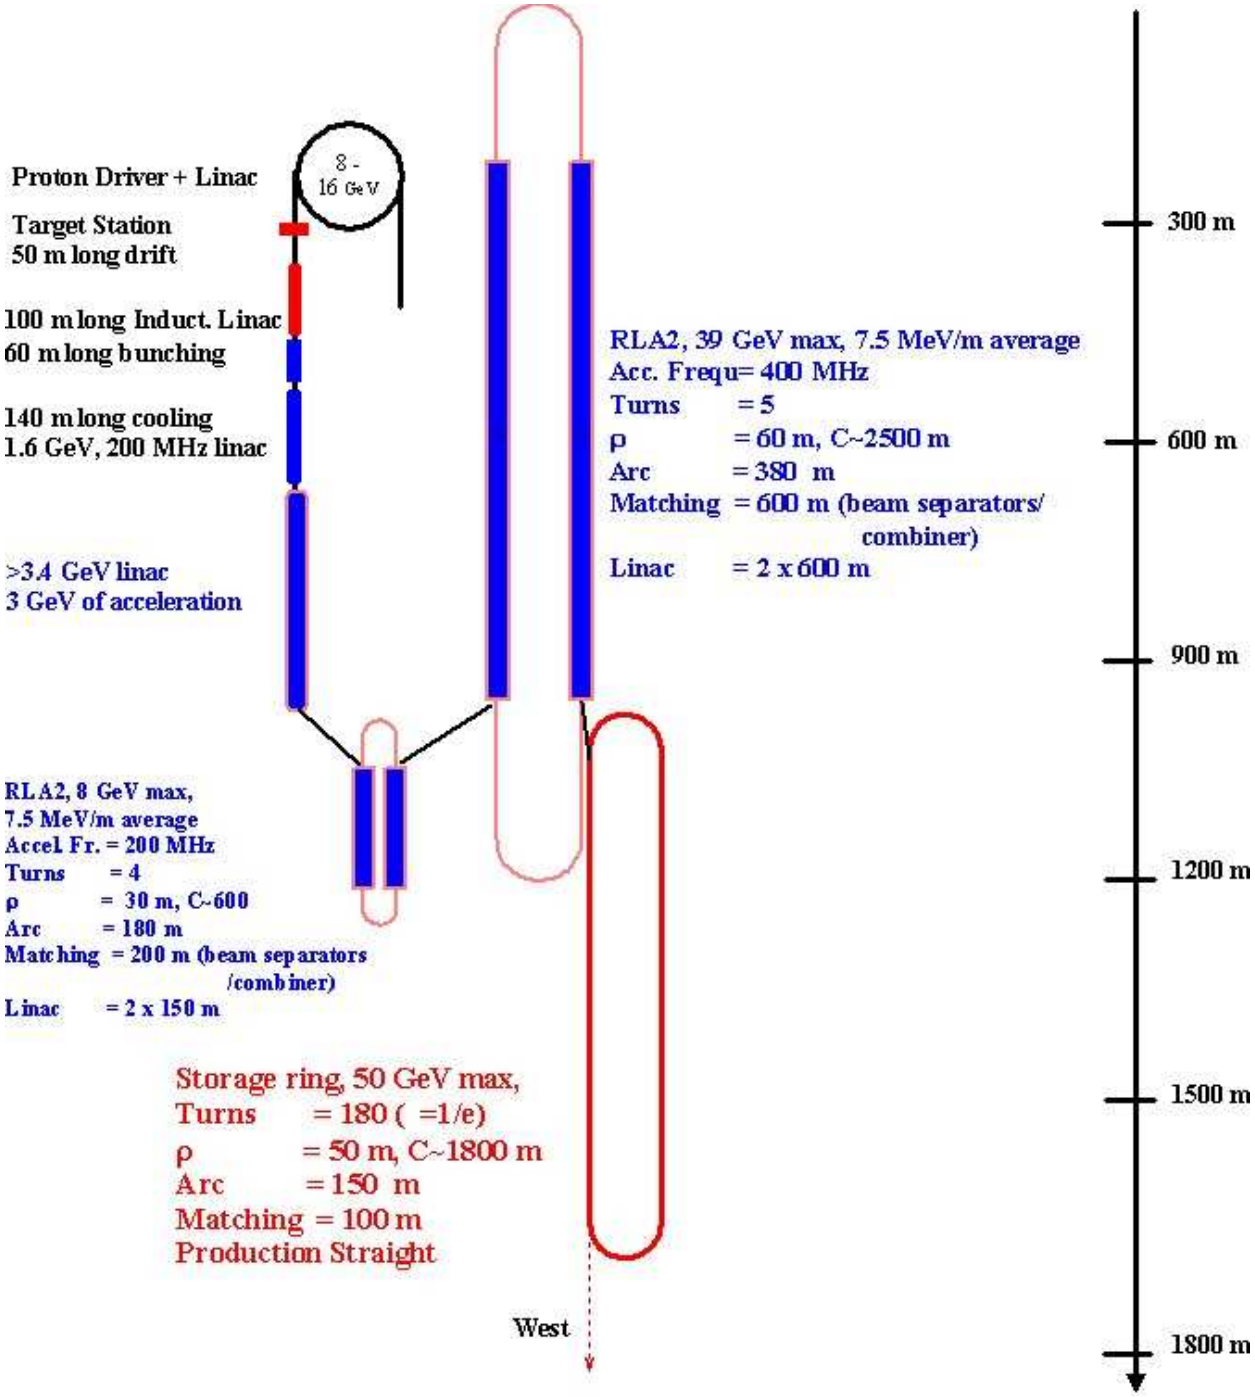
Norbert Holtkamp

M. Berz, D. Coissart, S. Drohzdin, D. Finley, B.Flora, C. Jensen, C. Johnstone, E. Keil, M.McAshan, K.Makino, S. Ohnuma,G, Krafzcyk, M.Popovic, J. Sims, D. Wolff, F. Zimmermann

- Introduction
- Basic Parameters
- Tracking and Beam Stability
- Polarization
- Technical Feasibility
- Cost
- Further Work

Footprint for a 50 GeV Neutrino Source

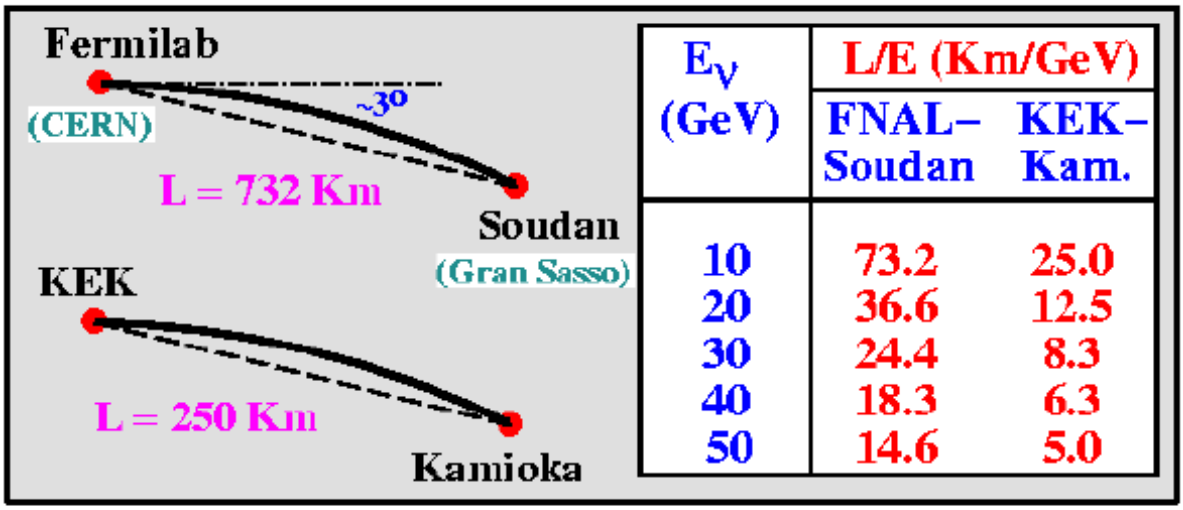
- $\Rightarrow$ Direction of P beam on target defines layout
- Ring is not largest facility and comparatively conventional
- Racetrack "requires" injection into downward straight



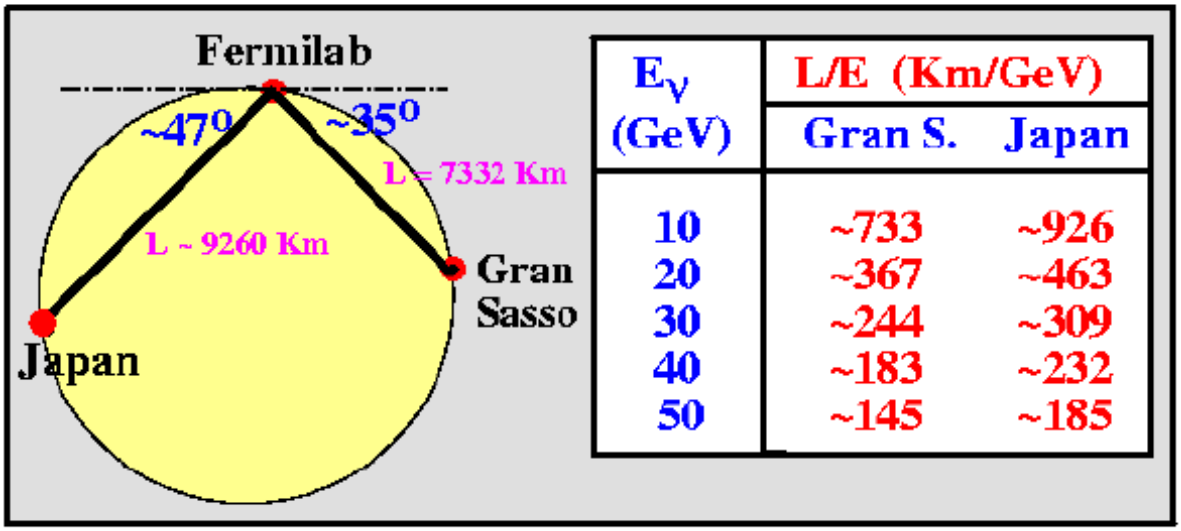
The Energy Choice, the Experiment and the Options

- Choice of baseline beam line angle are connected

	L (km)	Dip (Deg.)	Heading (Deg.)
FNAL –> Soudan	732	3	336
FNAL –> Gran Sasso	7332	35	50
FNAL –> Kamioka	9263	47	325

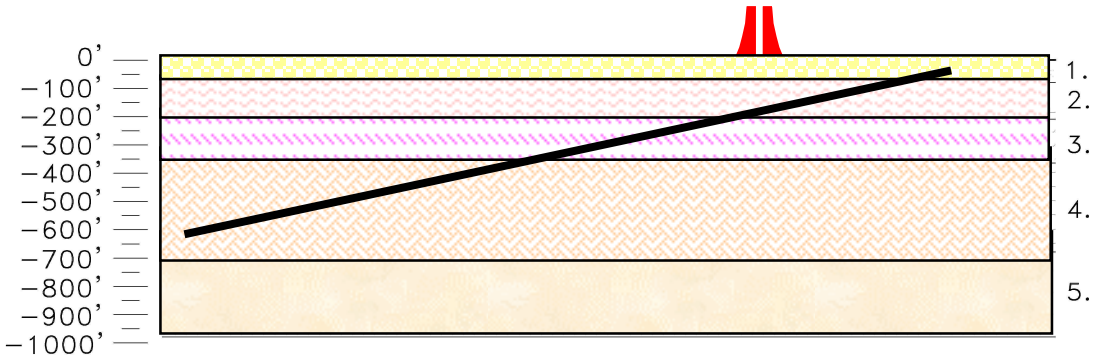


E_ν (GeV)	L/E (Km/GeV) FNAL–Soudan	L/E (Km/GeV) KEK–Kam.
10	73.2	25.0
20	36.6	12.5
30	24.4	8.3
40	18.3	6.3
50	14.6	5.0



E_ν (GeV)	L/E (Km/GeV) Gran S.	L/E (Km/GeV) Japan
10	~733	~926
20	~367	~463
30	~244	~309
40	~183	~232
50	~145	~185

What is Site Specific ?



GEOLOGY DETAIL
1"=100'-0"

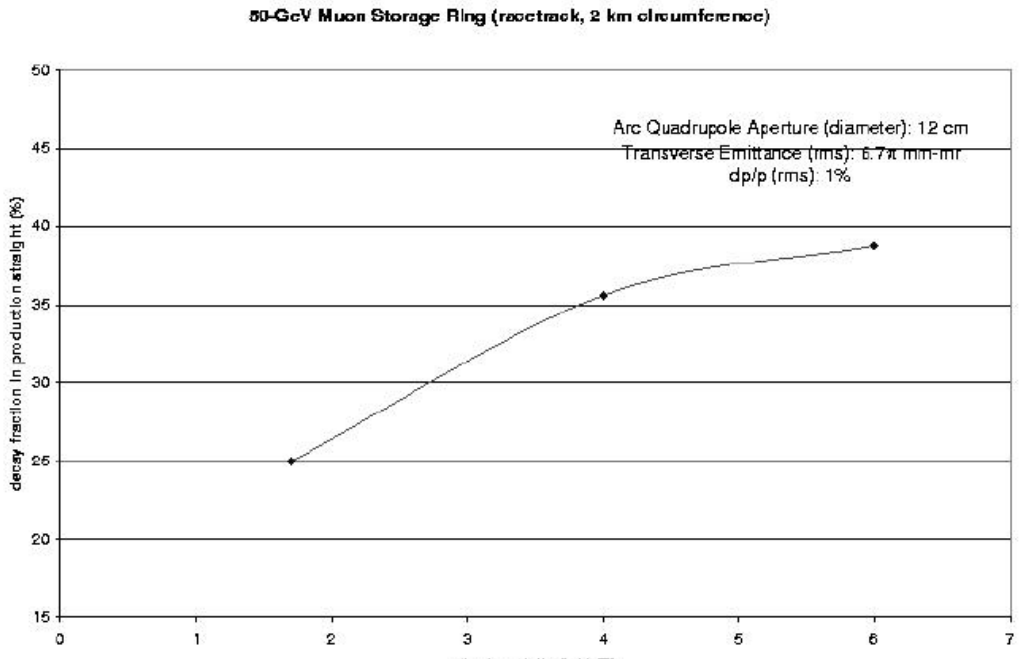
Optimization of the Storage Ring

- The cheapest way to produce neutrinos is to make the straight section as long as possible !

$$\eta = \frac{\text{Nr of } \mu \text{ decaying in straight section}}{\text{Nr of } \mu \text{ injected}}$$

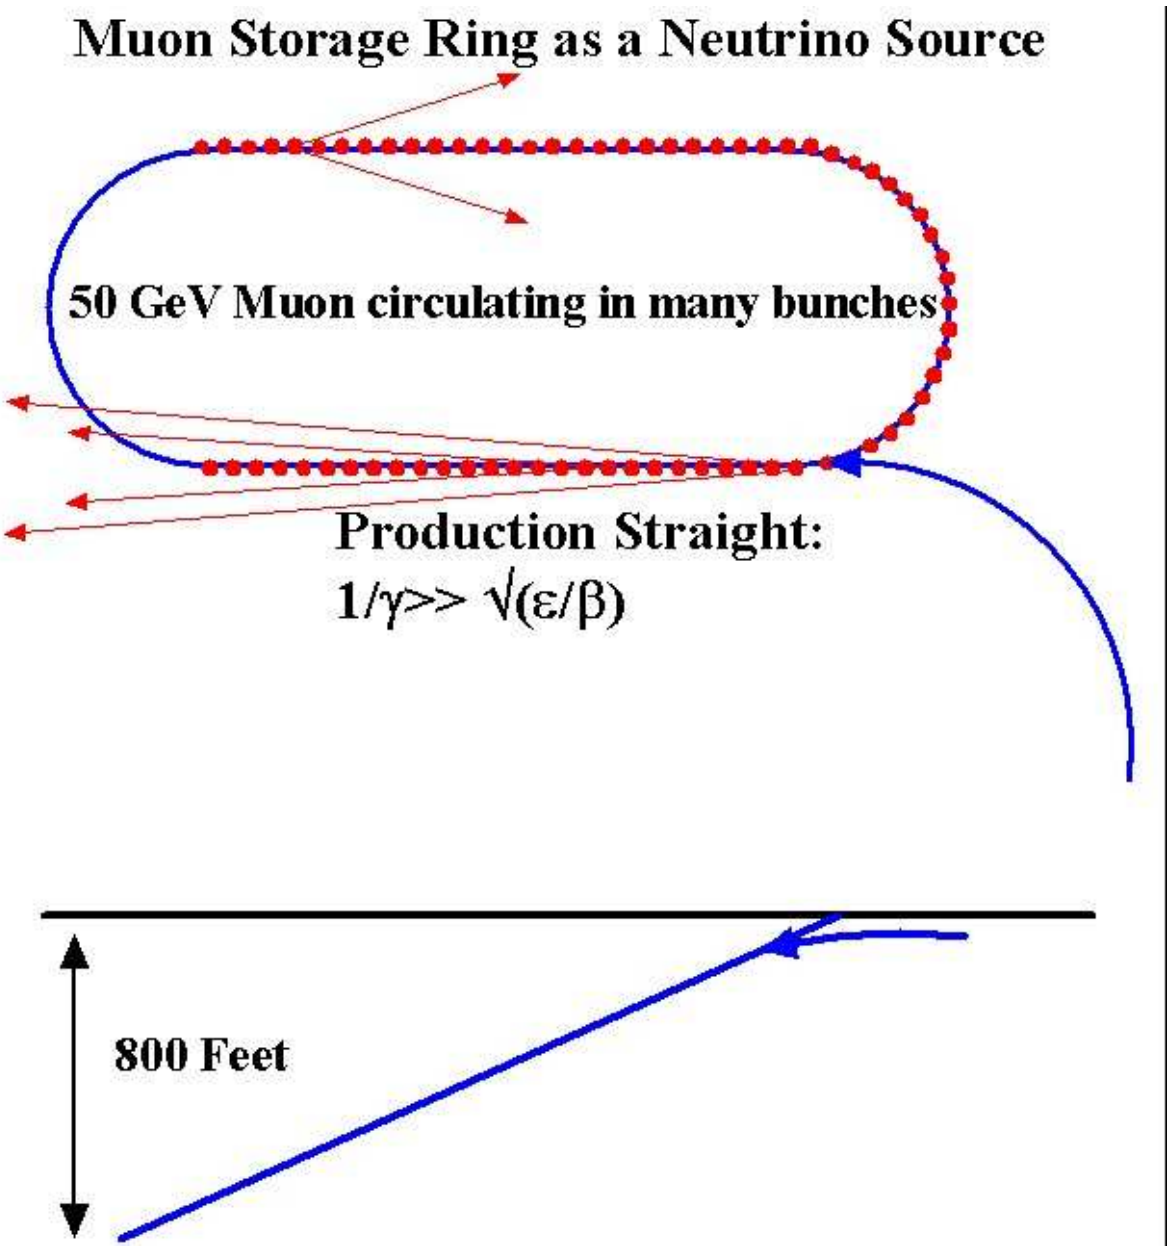
L=length of straight $\qquad \eta = \frac{1}{2\,(1+\pi\,\rho\,/L)} = \frac{1}{2\,(1+0.2)}$



B / Tesla

Conceptual Layout of the Muon Storage Ring

- Circumference larger than bunch train:
  - Easy injection (long rise, short fall time of kicker)
- Injection into downward straight:
  - Injection line is natural ⇒ very close to the surface

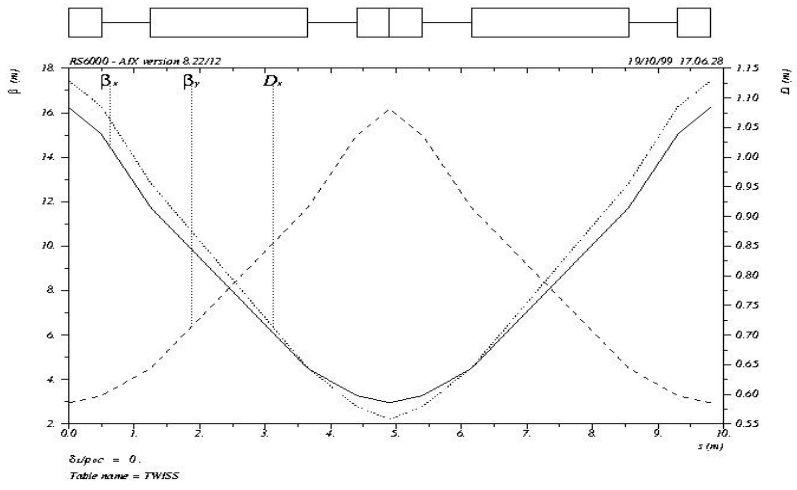


Storage Ring Parameters

Parameters for the Muon Storage Ring		
Energy	GeV	50
decay ratio	%	38
Designed for inv. Emittance	m*rad	**0.0032**
Cooling designed for inv. Emitt.	m*rad	**0.0016**
Momentum Acceptance	% (rms)	1
β in straight	m	~400
N_μ/pulse	10^{12}	~2
typical decay angle of μ = 1/γ	mrad	2.0
Beam angle ($\sqrt{\varepsilon}/\beta_o$) = ($\sqrt{\varepsilon}\,\gamma_\beta$)	mrad	0.2
Lifetime c*γ*τ	m	$3x10^5$

$\gamma_\beta = (1-\alpha^2)/\beta$

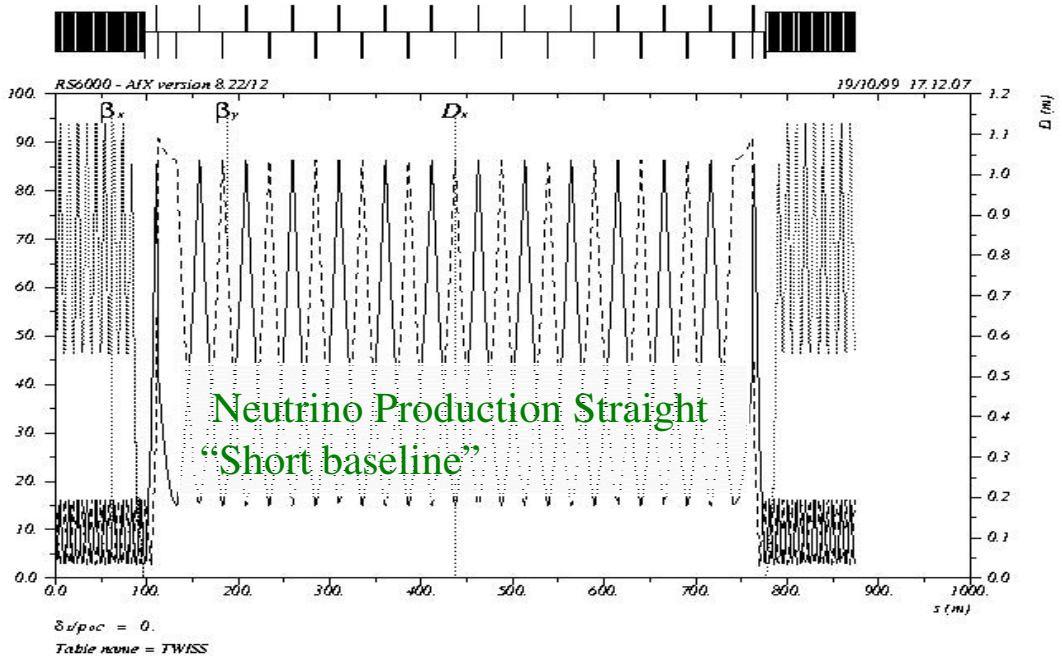
General		
Tungsten shield thickness	cm	1.0
Beam-stay-clear	cm	1.0
Inter magnet spacing	m	0.75
Dipoles		
Dipole length	m	2.4
Dipole bend	rad	0.0859
Dipole field	T	6.0
Beam size (6σ) WxH	cm	8.0x5.3
Dipole full aperture, WxH	cm	12x9.3
Sagitta	cm	2.67
Quadrupoles		
Quadrupole length	m	1.0
Quadrupole strength	m-2	0.31
Quadrupole poletip field	T	3.6
Beam size (6σ) WxH:		
F quad	cm	9.2x2.6
D quad	cm	4.2x6.2
Quadrupole bore	cm	14
Sextupoles (overlay on quad field)		
Horiz. Sextupole strength	m-3	0.64
Vert. Sextupole strength	m-3	1.26
Horiz. Sextupole field	T	0.52
Vert. Sextupole field	T	1.03
Arc FODO cell parameters		
Cell length	m	9.8
Cell phase advance	deg	90
β(max)	m	16.2
Dx(max)	m	1.3
Total number of arc cells		31



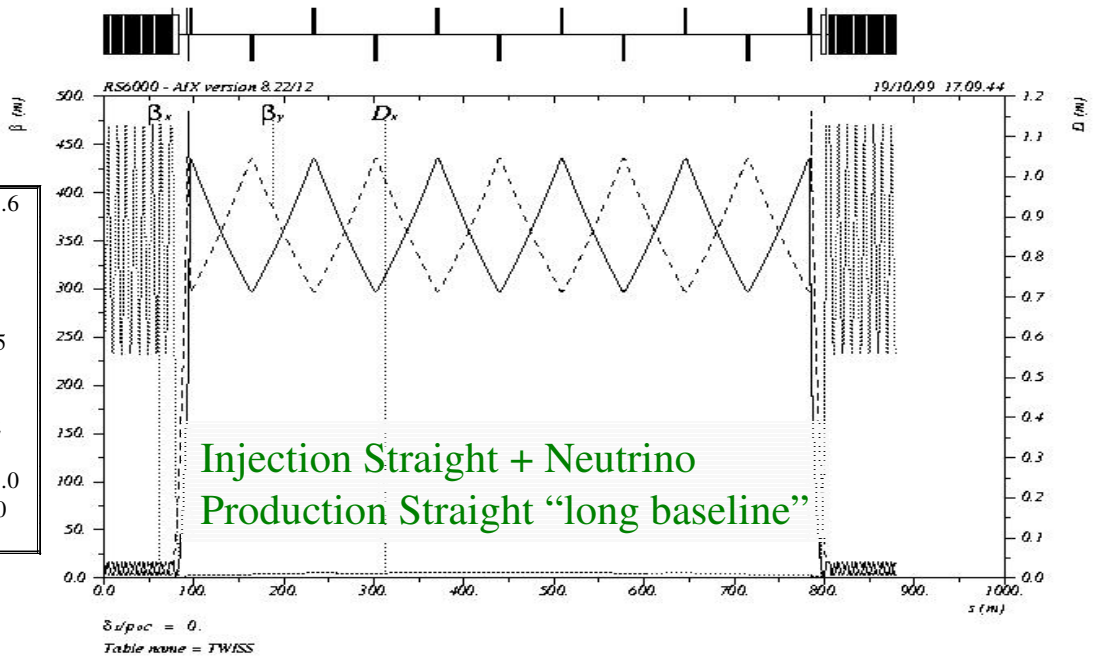
β function for one arc cell

A Storage Ring for 2 Experiments

Cell length	m	50.78
Quadrupole length	m	1
Quadrupole strength	m-2	0.056
Quadrupole poletip field	T	0.84
Quadrupole bore	cm	18
Cell phase advance	deg	90
β(max)	m	86.3
Rms divergence	mr	0.73
Number of cells		12

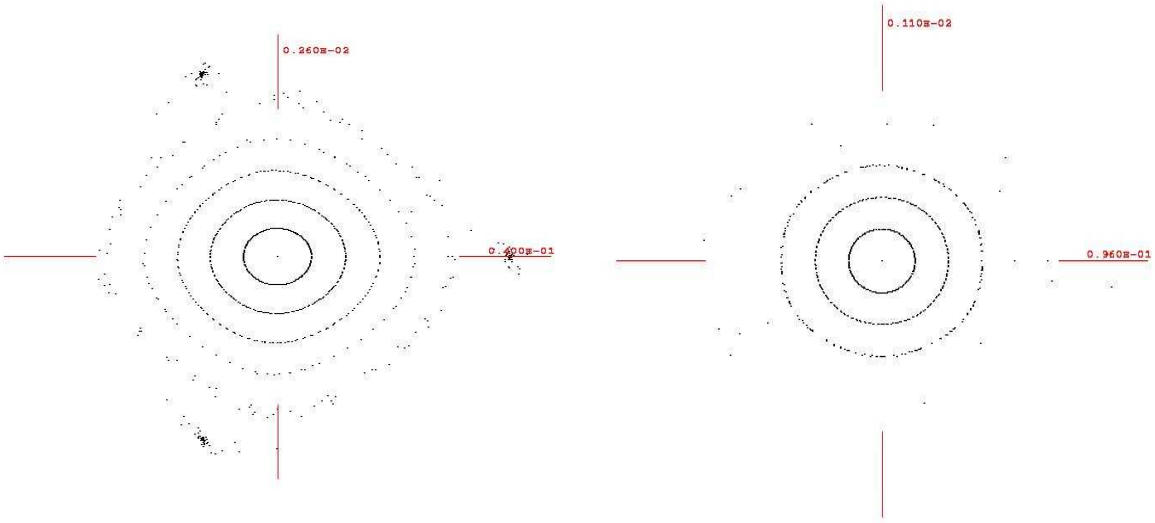


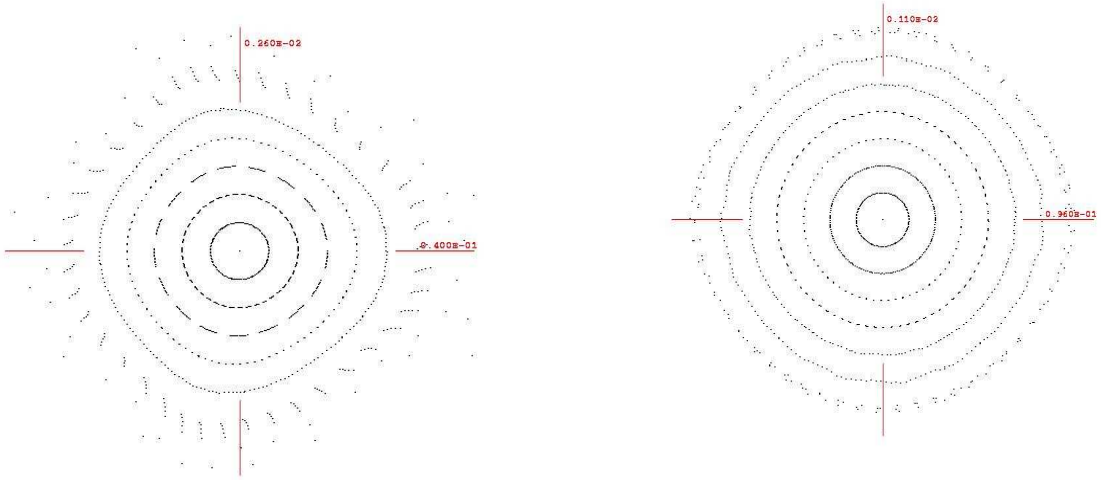
Cell length	m	137.6
Quadrupole length	m	3
Quadrupole strength	m-2	0.0019
Quadrupole poletip field	T	0.05
Quadrupole bore	cm	33
Cell phase advance	deg	≈22
β(max)	m	436.0
rms divergence	mr	0.20
Number of cells		5



Tracking

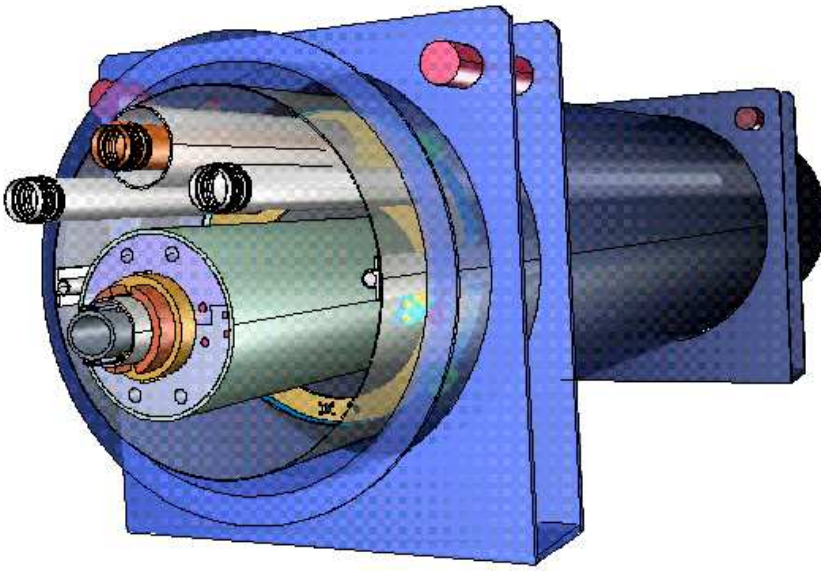
Top: Horizontal (left) and vertical (right) accepted phase space plots obtained by 9th order tracking including chromatic correction sextupoles and quadrupole fringe fields. Tracking is plotted in steps of 0.5 σ for an normalized emittance (rms) of 3200 π mm-mr. Bottom: Same as top plots but with quadrupole fringe fields in the matching sections to the production straight turned off.

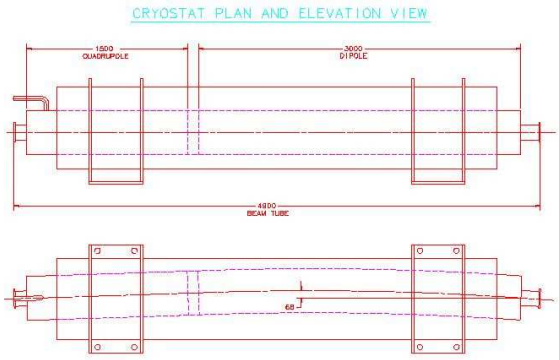


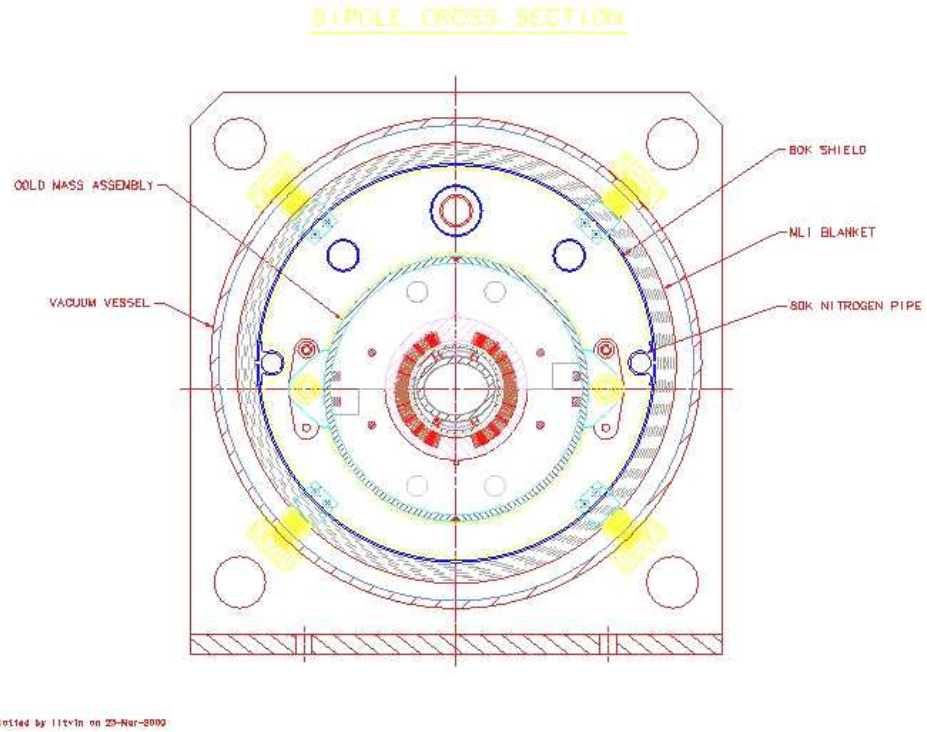


SC Large Bore Magnets

- Low field quality helps reduce price although large aperture
- 7 Watts/m into LHe due to electrons from Muon decay
- 1 cm tungsten (liner instead of 2 cm)



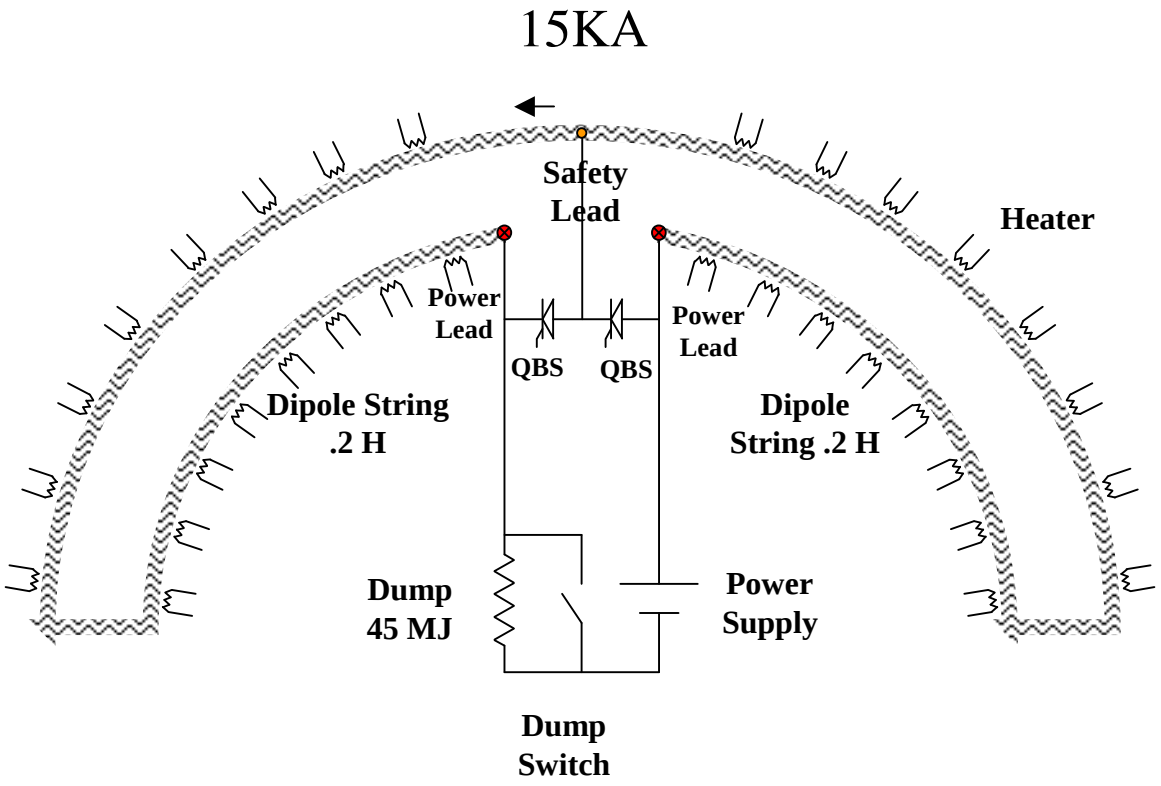




Plotted by ittvin on 23-Mar-2000

Cryo

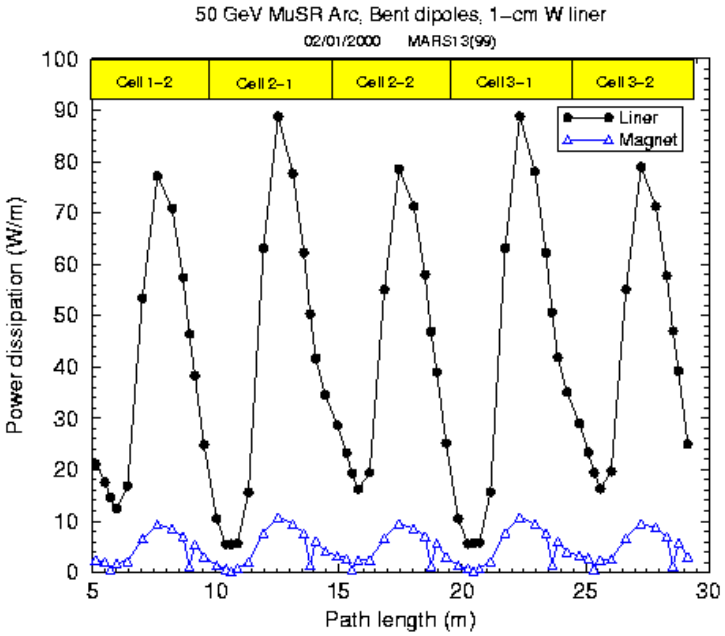
- Part of Lab wide facility with approximately 80 kW @ 4.5 K
- Loads for ring (@$2x10^7$ sec and $2x10^{20}$)
  - Static load ~ 3 W per cryostat
  - Dynamic load ~ 15 W cryostat

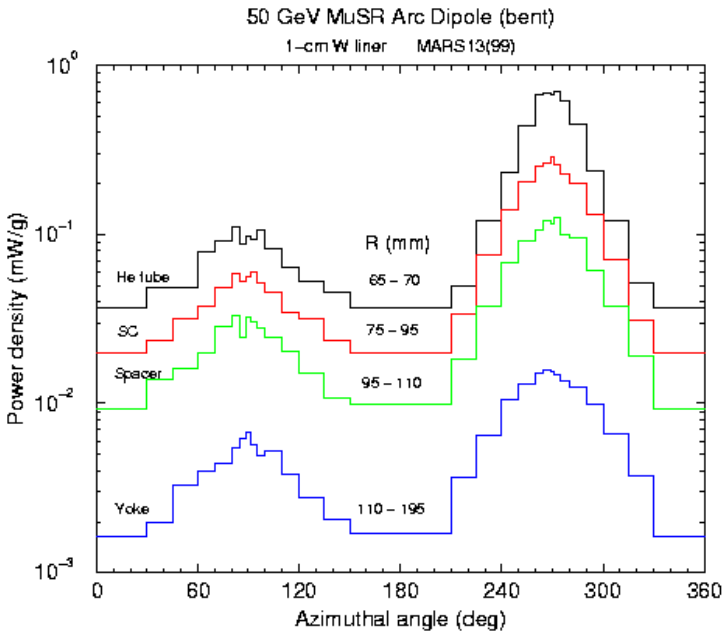


- Simple quench protection system
- Somewhat complicated LHe flux due to 10 m height difference in arc
- Plant upstairs but liquifier is 800 ft below, same with PS + support
  - Drop of 800 ft is too much for pumping LHe
  - Shielding is comparatively easy

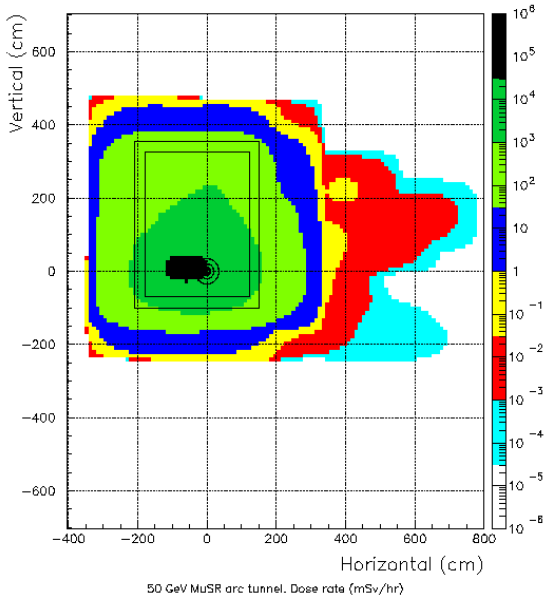
Decay Electrons

- Beam power
  - 240 kW muon beam → 80 kW deposition due to electrons
  - long racetrack → helps: 22 % decays in arcs
  - ~ 50 Watt/m in arcs + 1 cm tungsten shielding ~ 7 W/m into LHe



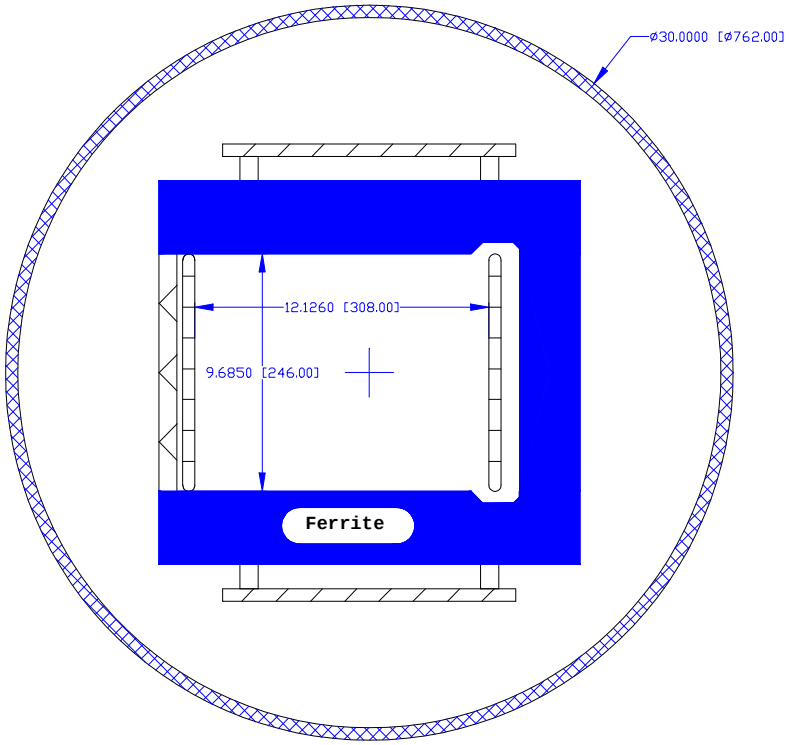


- Radiation in Tunnel
  - Mainly outward (7 m)
  - Inward ~ 3m is enough for unlimited occupancy



Injection

- Inject into downward straight
  - Large β-function
  - Fast fall time of kicker for on axis injection



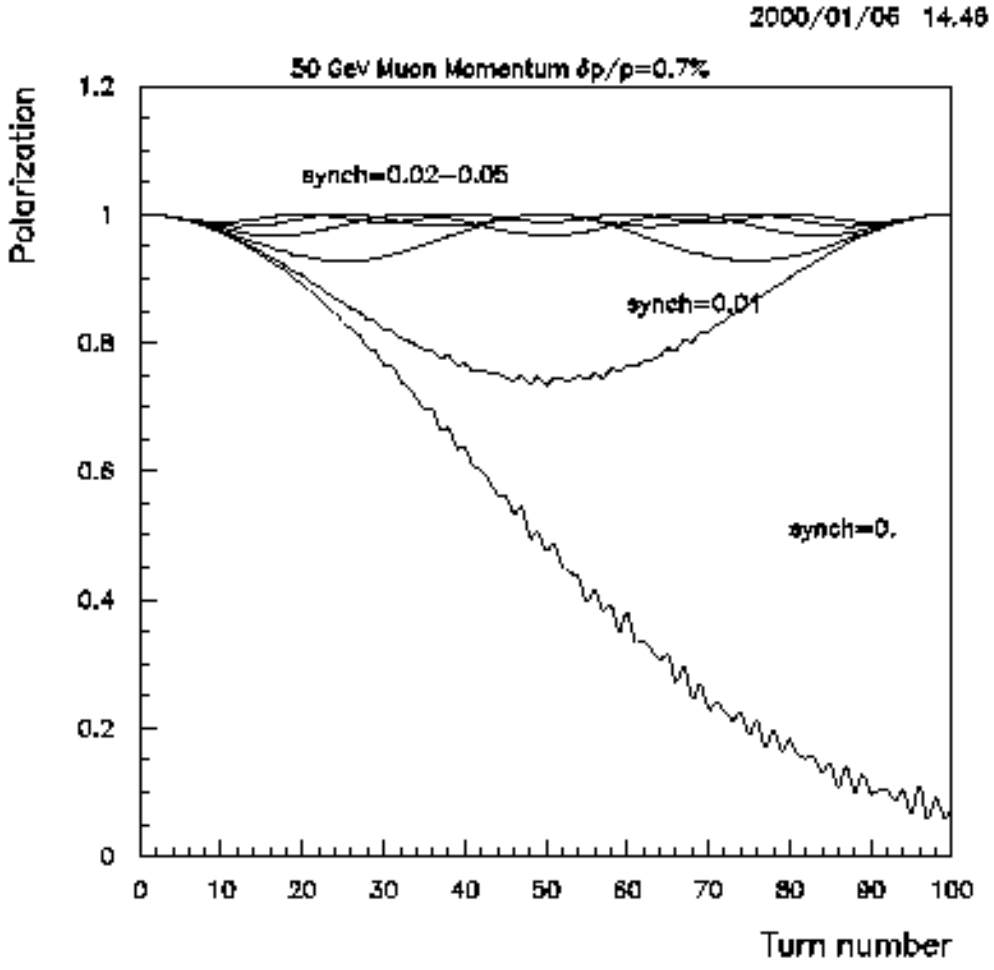
Type		Horizontal
Clear Gap WxH	mm	308x246
Integral BL	Tesla-meter	0.6
Field Flattop	μsec	2.0
Field Fall	μsec	4.0
Field Variation	%	10
Rep Rate	Hz	15
Length	m	25
Nr of Magnets		25

Polarization

- Needs RF installed
  - How much: depends on incoming dp/p
  - acceptable polarization swing

$$\varepsilon V = \left(\frac{Q_s}{0.015}\right)\left(\frac{\delta p/p}{0.007}\right) 25 MV$$

$$rf\ frequency \approx \left(\frac{Q_s}{0.015}\right)\left(\frac{0.007}{\delta p/p}\right) 92 MHz$$



Is 22 % steep ?

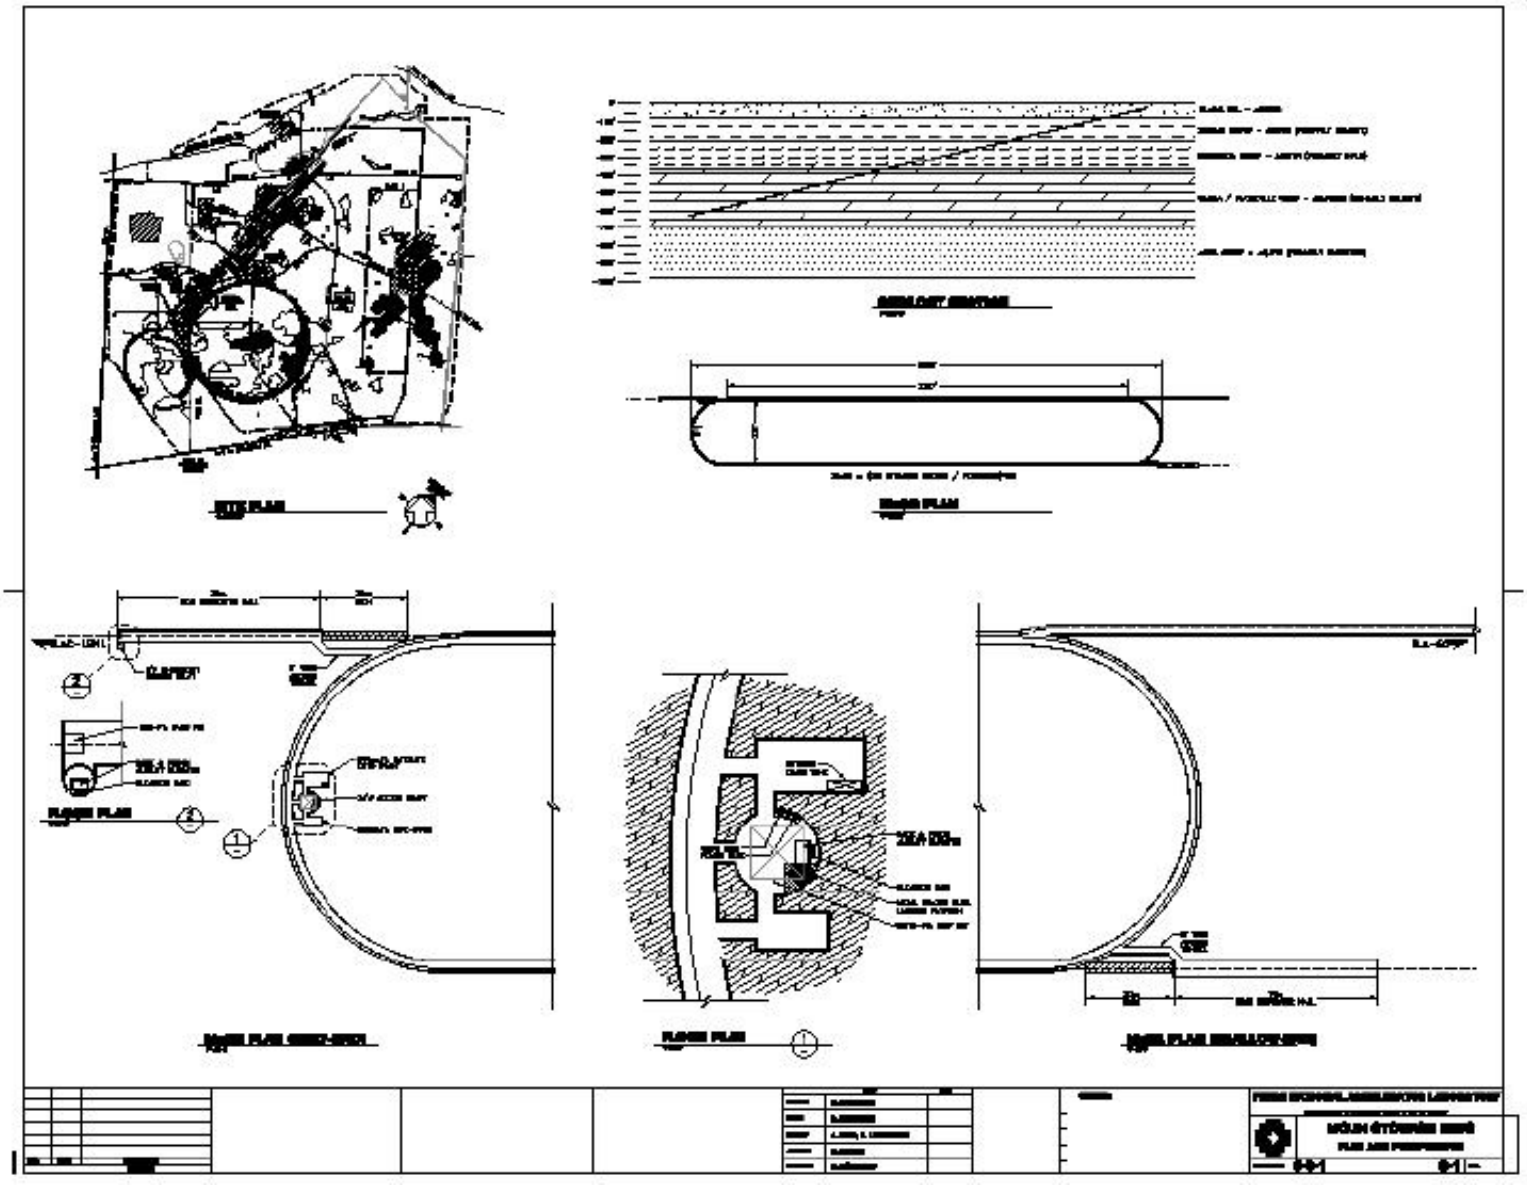
- 17 % into a quarry
- there is water !
- incremental cost small compared making more ν
- extend the ring up to the surface

Further down the ramp

Use vehicles

FESS

- Alcove at bottom end
- Near detector at bottom end
- Hall on surface
- Unlimited Access to bottom facility during operation



Civil Engineering for the Storage Ring

- Tunnel for very different environments

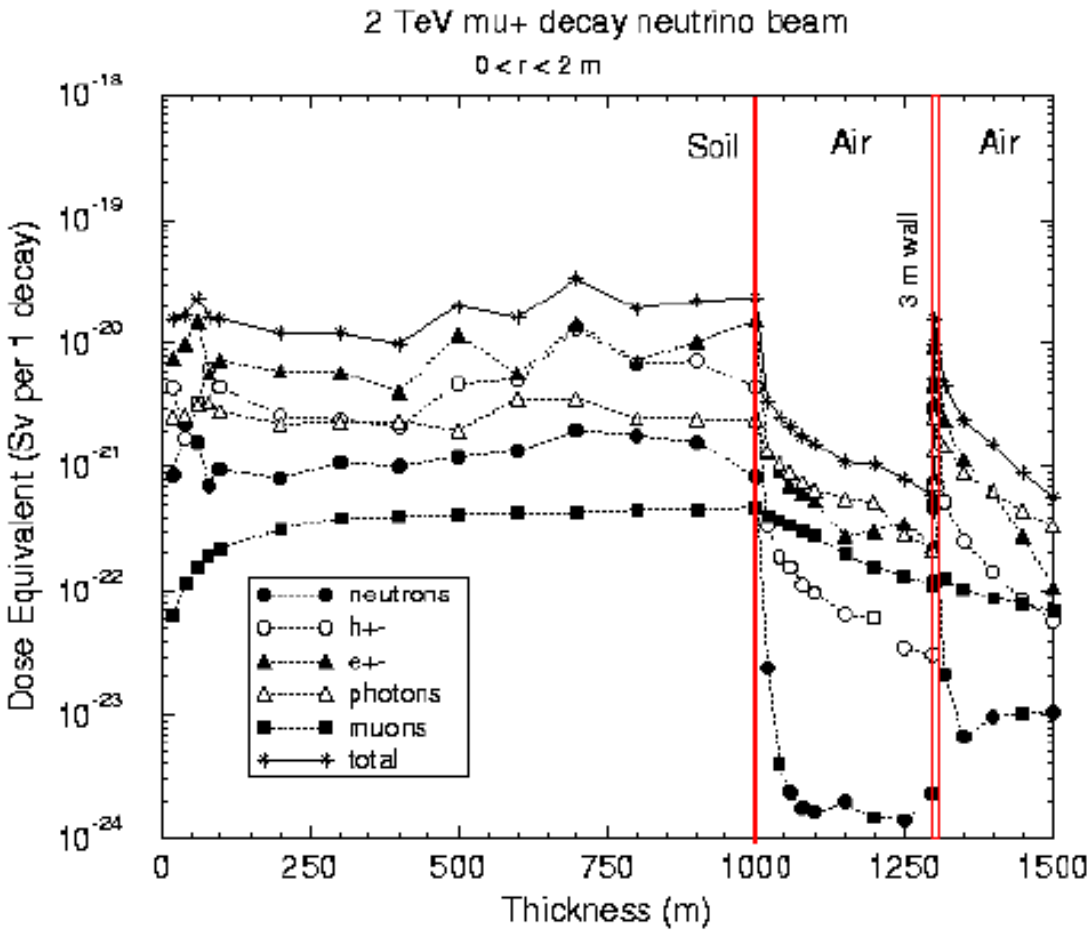
Neutrino Radiation from the μ Storage Ring: Max E_μ ?

- Neutrinos come up to surface: ϕ~13 deg (22%) μ-beam from the straight section pointing up

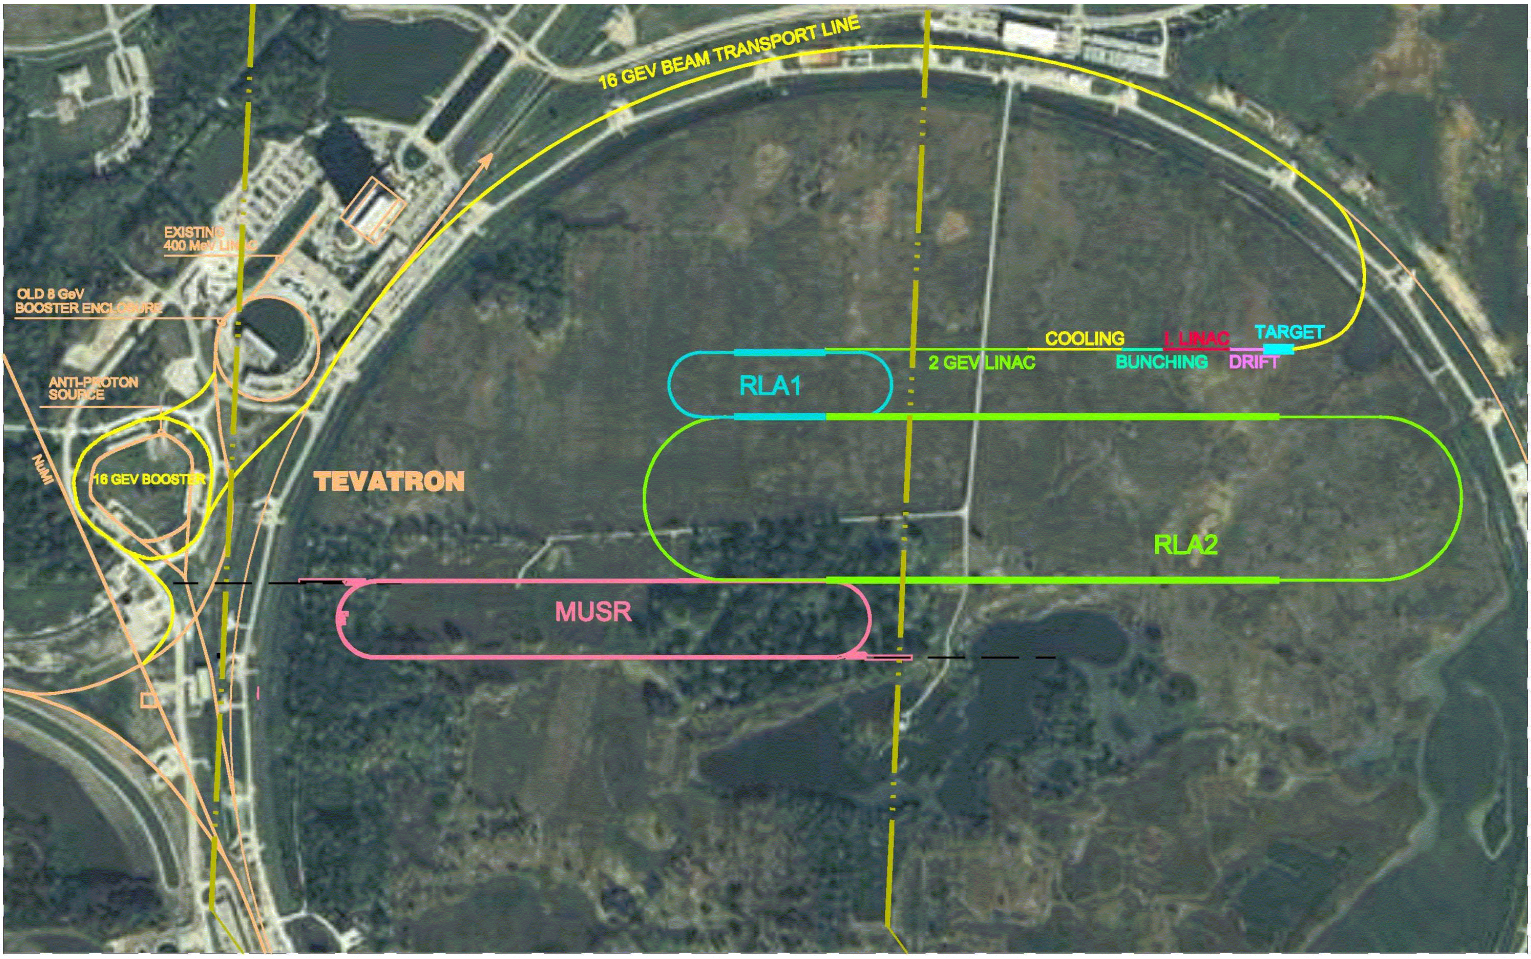


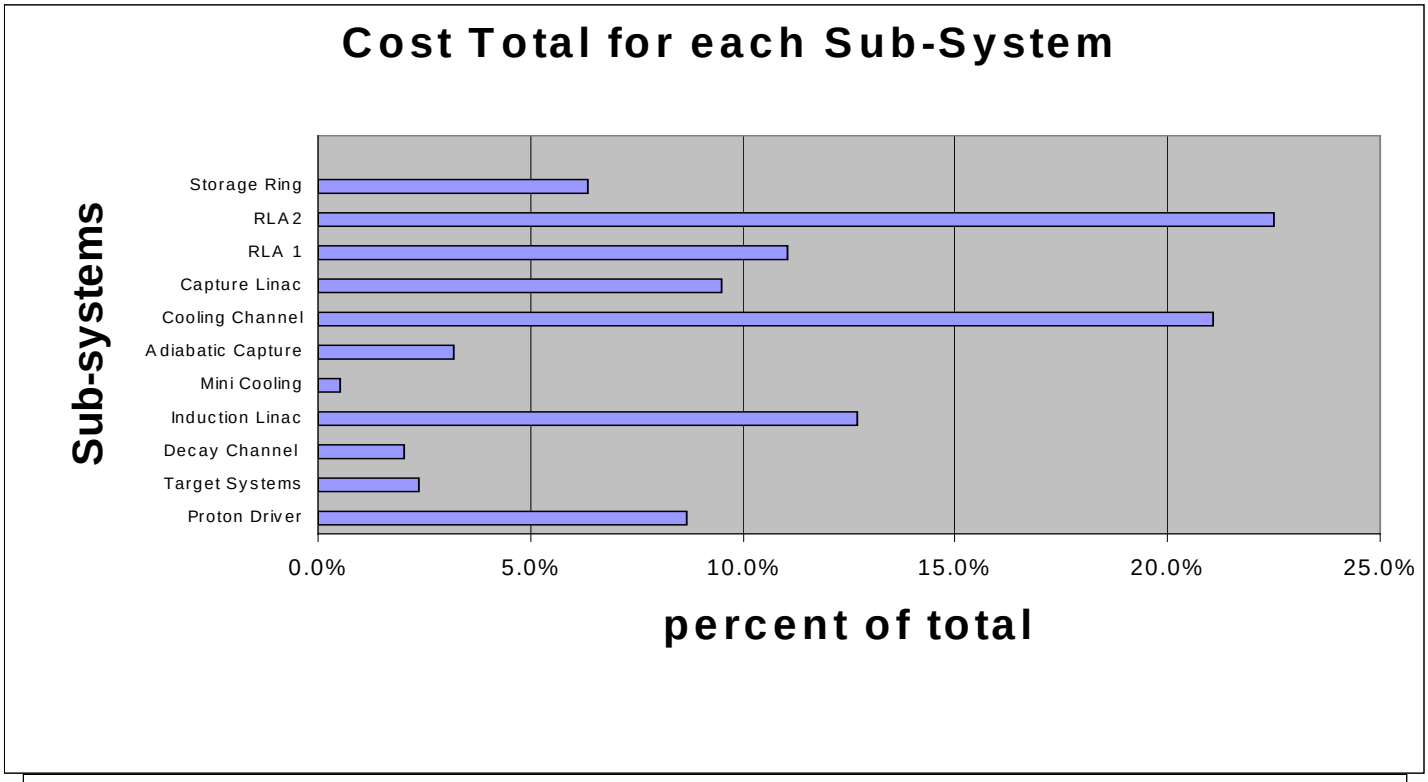
Fermi limit
0.1 mSv/year

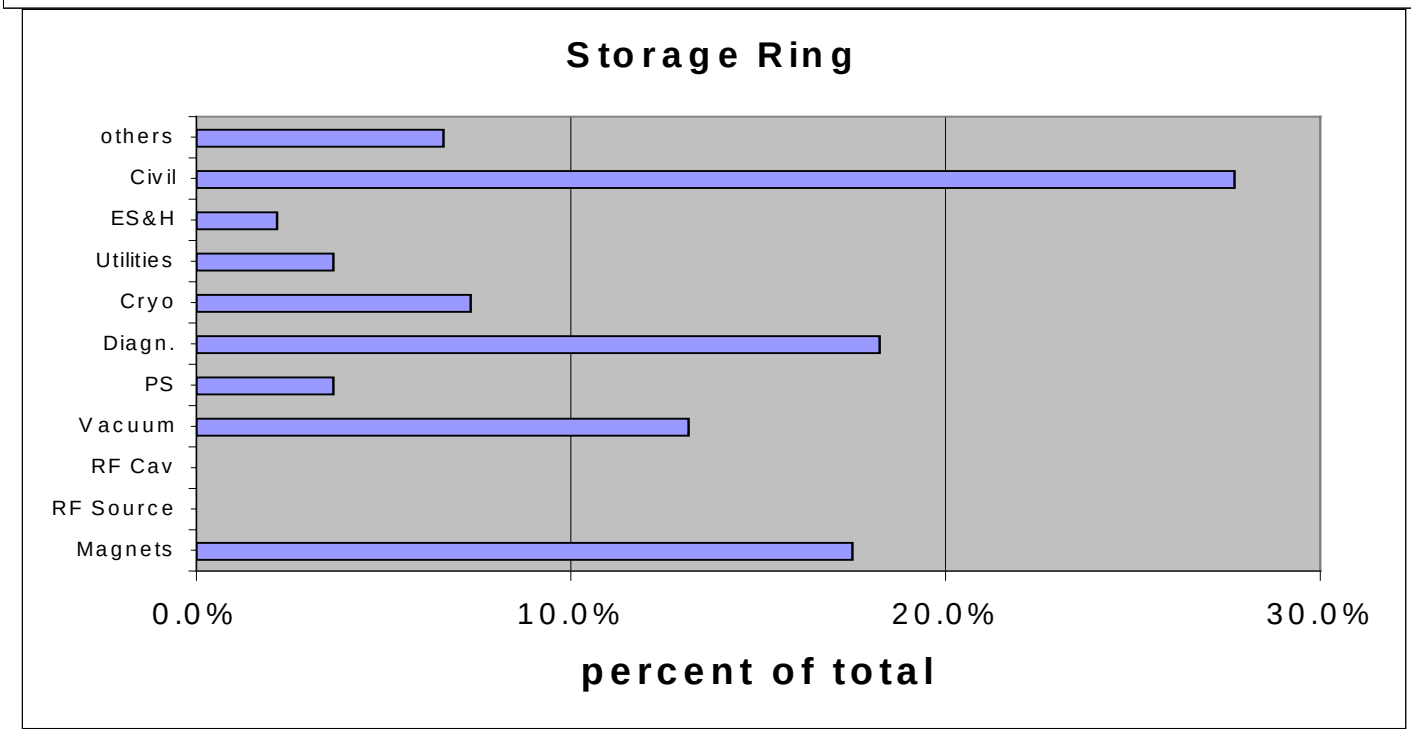
Federal Limit
1.0 mSv/year

Layout on this Site

- Why ?
  - Worldwide Unique facility
  - Detector cost and Accelerator cost can be balanced
  - Long Term program ⇒can be staged
  - Fits under a site
  - Has a large NSF/University/Illinois State/Inter Lab. collab



Overall Cost




- Total
