159	WOUND STORAGE PACKAGE	328.1	Radially shiftable hub
160.1	.Convolute coil (e.g., wound web)		component
160.2	Plural coils	328.2	Driven supply coil
160.3	Axial retainer (e.g., flange)	329	.Winding into coil center
160.4	For particular coiled material	329.1	Having coil hub expander
163	.Interconvolutionary strand	330	.Simultaneously driven carriers
103	delivery		(e.g., separate optic and
164	.Strand end feature		sound webs)
165	Strand end forms winding	331	.Intermediate storage (e.g., low
166	.Plural windings		inertia bin)
167	Serially connected	331.1	Vacuum column
168	.Distorted winding	331.2	Carrier responsive control
169	Spooled	331.3	Pneumatic pressure controller
170	Spooled .Housing or outer peripheral	331.4	Photoelectric controller
170	support	331.5	Having spool or carrier brake
171	With strand guide		control
172	.Strand restraining or snarl	332	.Including threading
1/2	preventing means	332.1	Having particular automated
173	Adhesive		control
174	Adnesive .Particular winding	332.2	Actuated by lead end sensor
174	Cone wind	332.3	Having pneumatic assist
176	On core	332.4	Having leader gripper or
177	Plain cone core		coupling
178		332.5	Having rotary extractor (e.g.,
324	Plain cylinder UNWINDING AND REWINDING A MACHINE		stripper)
324	CONVERTIBLE INFORMATION	332.6	Endless belt
	CARRIER (E.G., MAGNETIC TAPE	332.7	Having carrier to spool
	OR PHOTOGRAPHIC FILM)		attachment means
324.1	.Carrier helically or randomly	332.8	Slotted spool
324.1	wound (e.g., magnetic wire,	333	.Automated stop or reverse
	edge wound film, etc.)	333.1	Diverse control signal inputs
324.2	Cartridge storage	333.2	Carrier supported signal
324.3	Carrier distributor	333.3	Carrier engaging tension sensor
325	.Endless coiled carrier (i.e.,	333.4	Electrical control
323	closed loop)	333.5	Coil diameter sensor
325.1	Wound into superposed coil pair	333.6	Coil rotation sensor
325.2	Having carrier responsive	333.7	Electrical control
323.2	control	334	.Carrier speed or tension control
325.3	Reversible	334.1	Plural speeds
326	Cartridge storage	334.2	Diverse signal inputs
326.1	Insertion responsive component	334.3	Tachometer-type signal device
326.2	Particular cartridge structure	334.4	Tachometer-type signal device
326.3	Coil support	334.5	Coil diameter or weight
326.4	Carrier guide		responsive sensor
327	Particular coil support	334.6	Carrier tension responsive
327.1	To accommodate convolution		signal
327.1	speed variations	335	.Cartridge system (i.e.,
327.2	Radial roller		cartridge work station or
327.2	Multiple pulleys or hub		cartridge)
J 4 1 • J	rollers	336	Adaptive or convertible
327.4	Cooperating pulley pair	337	Plural (i.e., multiple
327.4	cooperating purity pair .Unwinding from coil center		cartridges per work station)
J20	. onwinding from Coff Center	337.1	Coil to coil

338	With insertion responsive	355.1	Radially applied
	component	355.2	By manual operator
338.1	Releasable brake	356	Alternately or differently
338.2	With shiftable cover actuator		driven coils
338.3	Acting on plural coils	356.1	Coaxial coils
338.4	Cartridge positioner	356.2	Step-driven coil
339	Cartridge ejector	356.3	Multiple carrier speeds
340	With particular drive mechanism	356.4	With particular manual
341	Coil-to-coil cartridge		controller
342	With particular drive coupling	356.5	By friction drive
343	With brake or lock	356.6	With one-way clutch
343.1	Yieldable brake	356.7	Radially acting wheel, disk,
343.2	Spool or coil engaging		or belt
344	With indicator or detector	357	.With detector or indicator
345	With particular coil support		(e.g., length scale)
345.1	Coaxial coils	358	.Particular frame or frame
345.2	Spring pressed coil or spool		attachment
345.3	Coil on liner	358.1	Including spool support
346	With particular guide or guard	360	LOOP FORMING (E.G., WINDING A
346.1	Shiftably mounted		BUNDLE OF WIRE COILS)
346.2	Rotatable	361	.By orbital guide
347	With particular housing	361.1	Simultaneous or successive
347	construction		winding
347.1	Shiftable closure (e.g.,	361.2	About internal loop form
347.1	door)	361.3	With loop discharge device
347.2	Separable or hinged sections	361.4	With loop collector
348	Single coil cartridge (e.g.,	361.5	With loop bundle unloader
240	film magazine)	362	.By rotatably driven loop
348.1	With carrier inner end	302	collector
240.1	collector	362.1	Simultaneous or successive
348.2	With carrier outer end	30211	winding
340.2	retainer	362.2	With loop bundle unloader
348.3	With means to facilitate	362.3	Stripper plate or arm
340.3	unwinding	363	.With particular loop or coil
348.4	Light occludent	303	transfer mechanism
349	Light occludent .With particular drive	364	UNIDIRECTIONAL WINDING AND
350	Manual	304	UNWINDING
351		364.1	.Convolute coil
	Nonelectrical motor	364.11	.Partial wrap around plural
352	Simultaneous drive to supply	204.11	rotatable supports
352.1	and take-up coils	364.12	Shifting material axially
	Each drive a motor	364.2	Distinct supporting surfaces on
352.2	With additional linear feed drive motor	304.2	a support
352.3	Coil engaging drive	364.3	With radial spacing regulator
352.4	Endless belt	364.4	.Threading
352.5	Multiple carrier speeds	364.5	.Convertible between variable and
353	With yieldable loop former	301.3	fixed number of windings on
354	With yieldable loop lormerParticular linear feeder (e.g.,		material support
J J 4	capstan or sprocket)	364.6	.Variable number of windings on
354.1	Plural		support
354.1		364.7	Having material accumulation
JJ4.Z	With particular manual controller	/	sensor
355			:
333	With brake or stop		

364.8	Senses without material contact	236	With manual actuator to shift guide to unwind position
364.9	Rotating winding surface	237	Actuator forward of rotor
365	Movable material displacement	238	With line snubber shifted by
303	means (e.g., wobble plate)	230	remote actuator
365.1	Material removed axially from	239	Rotor and snubber shiftable
	winding surface		axially
365.2	Single material strand	240	Guide shifted radially
	simultaneously wound into or	241	With level-winding mechanism
	unwound from plural coils	242	Eccentric cam reciprocates
365.3	Stationary winding surface		spool
	(e.g., with flyer)	243	With brake
365.4	Brake providing resistance to	244	Continuously applied
	removal of material	245	Between spool shaft and
365.5	Adjustable drum surface (e.g.,	243	frame
303.3	variable diameter)	246	
365.6	Fixed number of windings on	240	Between spool and spool
303.0		0.45	shaft
	<pre>winding surface (e.g., positive feeder)</pre>	247	Positive
265 7	-	248	Defines home position of
365.7	Automatic control or regulation		reel part
265 0	of speed of winding surface	249	With drive mechanism
365.8	Manually adjustable winding	250	Motor driven
	surface speed	251	Spring motor
365.9	Manual drive	252	Motor actuated in response
366	Winding drum details		to pull on line
366.1	Variable diameter	253	With independent manual
366.2	.Shifting material axially on		drive
	support	254	With spring charger
366.3	.Distributing material along the	255	Multiple drive ratio
	support	256	Ratchet-type drive
366.4	.Particular drive	257	With disengageable positive
370	REELING DEVICE	237	drive components (e.g., a
223	.Fishing rod reel		clutch)
224	Axial unwinding (i.e., spinning	258	With alternative yieldable
	reel)	230	mechanism
225	Motor driven	259	Axially engaged
226	Spring motor	260	Coaxial of spool
227	Spool rotatable to wind	261	Reengageable responsive to
228	With guide shiftable between		drive rotation
	wind and unwind positions		
000		262	Reengageable responsive to
229		262	Reengageable responsive to drive rotation
229	Spool pivotal between wind		drive rotation
230	Spool pivotal between wind and unwind positions	263	drive rotationGear pair
	Spool pivotal between wind and unwind positionsWith winding guide on rotor		drive rotationGear pairWith yieldable drive coupling
230	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spool	263	<pre>drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid</pre>
230 231	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotor	263 264	<pre>drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)</pre>
230	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind	263	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank
230 231 232	 Spool pivotal between wind and unwind positions With winding guide on rotor rearward of spool Guide shiftable on rotor Guide shifted to wind position by rotor drive 	263 264 265	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulation
230 231	 Spool pivotal between wind and unwind positions With winding guide on rotor rearward of spool Guide shiftable on rotor Guide shifted to wind position by rotor drive Guide shifted to unwind 	263 264	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct
230 231 232	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind position by rotor driveGuide shifted to unwind position by discrete manual	263 264 265 266	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct range(s)
230231232233	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind position by rotor driveGuide shifted to unwind position by discrete manual operator	263 264 265 266 267	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct range(s)Between drive shaft and crank
230 231 232	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind position by rotor driveGuide shifted to unwind position by discrete manual operatorWith winding guide on rotor	263 264 265 266 267 268	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct range(s)Between drive shaft and crankBetween drive shaft and gear
230231232233234	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind position by rotor driveGuide shifted to unwind position by discrete manual operatorWith winding guide on rotor forward of spool	263 264 265 266 267 268 269	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct range(s)Between drive shaft and crankBetween drive shaft and gearCoaxial with line take-up
230231232233	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind position by rotor driveGuide shifted to unwind position by discrete manual operatorWith winding guide on rotor forward of spoolRotor drive shifts guide to	263 264 265 266 267 268 269 270	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct range(s)Between drive shaft and crankBetween drive shaft and gearCoaxial with line take-upAxially applied
230231232233234	Spool pivotal between wind and unwind positionsWith winding guide on rotor rearward of spoolGuide shiftable on rotorGuide shifted to wind position by rotor driveGuide shifted to unwind position by discrete manual operatorWith winding guide on rotor forward of spool	263 264 265 266 267 268 269 270 271	drive rotationGear pairWith yieldable drive coupling (e.g., friction or fluid clutch)Variable by crank manipulationVariable within distinct range(s)Between drive shaft and crankBetween drive shaft and gearCoaxial with line take-upAxially appliedBy center pin

273	With level winding	314	Rotated joint
274	Line shifts along rotatable	315	Threaded
	cam bar	316	Reel support (e.g., reel foot)
275	Line traction guide wheel	317	Stub shaft support
276	Manually shifted guide	318	With spool retainer feature
277	Drive mechanism oscillates	319	With line or water shield
	guide	320	With lubrication feature
278	Drive mechanism reciprocates	321	With bearing feature
	quide	322	Spool or spool shaft feature
279	Reversely threaded screw	323	Reel attachment
280	Guide shiftable between	371	.With spring motor
200	wind and unwind positions	372	Plural springs
281	Guide has line removal	372	Spring exhibits special torque
201	opening	373	characteristic
282	Alternative right or left side	374	With auxiliary force rewinding
-	drive	375	Spring attachment
283	Hand crank feature	375.1	Spring detachmentSpring force adjustment
284	Collapsible or extensible	375.2	Pretensioned spring attachment
285	With brake	375.3	With transmission
286	Unwinding speed regulator	375.3	Particular spool structure
200	(e.g., anti-backlash brake)	376.1	-
287	Line tension responsive		Particular bearing
207	actuator	377	Particular guide structure
288	Magnetic	378	Multiple windings
289	Centrifugal	378.1	Of centrally gripped material
290	Spool bearing brake	378.2	End segment anchored
290	Manual pressure control	378.3	Material supported spool
292	-	378.4	On independent spools
292	Radially applied	379	Particular frame or frame
	Rolling contact		carrier
294	Separable attachment	379.1	Energy or stress absorption
295	Connected to spool by one-way clutch	250 0	structure
296		379.2	Frame carrier feature
290	Adjustable pressure pawl	380	Material irregularity (e.g.,
297	(e.g., braking clicker)	0.04	knot) engageable with stop
_	Positive	381	Yieldable brake (e.g., friction
298	One-way		or fluid)
299	With disabler	381.1	Material engaging
300	Rotation responsive	381.2	Engages wound material
301	Radially engaged	381.3	Manually operated
302	Axially engaged	381.4	Tension responsive
303	Coaxial with spool	381.5	Centrifugal
304	On adjustable lever	381.6	Manually operated
305	With unwinding indicator (e.g.,	382	Lock against spool unwinding
	bell or flashing light)	382.1	Material responsive (e.g.,
306	Clicking indicator (e.g.,		automatic lock)
	flexible pawl and toothed	382.2	Convertible to emergency
	member)		locking
307	Spring biased pawl	382.3	Time delay
308	Plural spring sections	382.4	Predetermined length of
309	With line unwinding limiter		material unwound
310	Frame or static component	382.5	Alternately engaged locking
311	Spinning reel frame		pawls
312	Frame disassembly feature	382.6	Shiftable spool body
313	Hinged frame section		

383	Material speed responsive	391	Traction driven spool (e.g.,
000 1	(e.g., belt sensitive)	004.4	ground engaging)
383.1	With lock prevention or	391.1	Spool shiftable clear of
202.0	sensitivity reduction	201 0	traction surface
383.2	Inertia operator	391.2	With spool drive transmission
383.3	Axially movable lock	391.3	Belt or chain
383.4	Frame mounted locking pawl	392	Spool on vehicle wheel or axle
383.5	Opposed pawls on spool	393	Peripherally driven spool
384	Frame movement responsive (e.g., vehicle sensitive)	394	<pre>Releasable spool drive (e.g., clutched spool)</pre>
384.1	With lock prevention or sensitivity reduction	394.1	Limited torque (e.g., slip coupling)
384.2	With pivot pawl	395	Manually rotatable crank or
384.3	Axially movable lock member	333	wheel
384.4	Multiply positionable	395.1	Foldable spool drive crank
304.4	operator	396	.With brake
384.5	Pendulum operator	396.1	Positive
384.6	Ball operator	396.2	One-way
384.7	Manually operated	396.3	Reversible
385		396.4	Ratchet and radial pawl
	Lock against spool winding	396.4	
385.1	Material movement responsive		Friction
205 2	(e.g., window shade type)	396.6	Applied to coil or spool
385.2	With additional lock release	206 7	(e.g., radial)
385.3	Movable locking pawl on frame	396.7	User pressure application
385.4	Manually operated	396.8	Radially applied
386	.With orbital wrapping guide	396.9	Axially applied
387	.Axial unwinding	397	.With particular guide or guard
388	.Multiple windings	397.1	Guide boom or tube
388.1	Of centrally gripped material	397.2	Shiftably mounted guide (e.g.,
388.2	With material snagging lock	207 2	material distributor)
200 2	(e.g., midline tightener)	397.3	Driven shifting device (e.g.,
388.3	With unidirectional brake	000 4	cam, crank, or screw)
388.4	With integrated crank	397.4	Manually operated
388.5	With mounting frame	397.5	Rotary guide
388.6	Plural spools or spool portions	398	.With particular frame or frame
388.7	Alternatively driven		carrier
388.8	Single power source (e.g.,	399	Plural spool positions
	clutched spools)	399.1	With discrete actuator
388.9	.Material stored in loops or	399.2	Arcuately displaced positions
	variable-size coils	400	Combined with nonreel device
388.91	Plural coils	400.1	Hand wrapped
389	.With particular drive (e.g.,	401	Collapsible or knockdown
	ratchet drive, motor drive)	402	With material segment retainer
390	Motor powered	403	Mobile carrier
390.1	With material length stop	403.1	Single primary axle (e.g.,
390.2	For unwinding		hand cart)
390.3	With coil constrainer	404	Releasable mounting (e.g.,
390.4	Weight		separable fastener)
390.5	Fluid	404.1	Flexible strap or harness
390.6	With speed or torque control	404.2	Clamp (e.g., C-clamp)
390.7	Vehicle motor (e.g., power	404.3	Hook, ring, or hanger
	take-off)	405	Hand carried
390.8	Electric	405.1	Hand wrapped
390.9	With speed or torque control	405.2	With distinct handle
330.3	with speed of torque control	403.2	witti distinct nandie

405 0		400	
405.3	With distinct handle	420	Supply coil drive control
406	With special base or mounting	420.1	Peripheral drive
	member (e.g., attachment	420.2	Belt
	socket or stake)	420.3	Slackness sensor
407	.With particular spool	420.4	Clutch
407.1	Collapsible or knockdown	420.5	Electrical control circuit
410	TENSION CONTROL OR BRAKE	420.6	Slackness sensor
411	.Cyclic material reserve (e.g.,	421	Supply coil brake control
	irregularly shaped take-up)	421.1	Plural sensors
412	.Take-up coil drive control	421.2	Coil diameter sensor
412.1	With supply control	421.3	Coil weight sensor
412.2	Plural condition sensors	421.4	Speed, torque, or revolutions
	(e.g., slack loop sensors)		sensor
412.3	Diverse (e.g., slack loop and	421.5	Slackness sensor
	diameter sensors)	421.6	With power control circuit
413	With material condition sensor	421.7	Electrical
413.1	Plural sensors	421.8	Mechanically applied brake
413.2	Coil diameter responsive	421.9	Compound leverage mechanism
	sensor	422	Yieldable coil brake
413.3	Slackness sensor (e.g.,	422.1	Plural
	photocell or load cell)	422.2	Fluid or magnetic brake or
413.4	With power control circuit		operator
413.5	Electrical	422.3	Electrical operator
413.6	Switch actuated	422.4	Radially applied
413.7	Transmission control	422.5	Wound material engaging
413.8	Yieldable drive (e.g.,	422.6	Strap
	clutch or slip coupling)	422.7	Accommodates roll transfer
413.9	Speed of running material	422.8	Strap
	sensor	422.9	Opposed
414	Power control circuit (e.g.,	423	Axially applied
	fluid regulating network)	423.1	Coaxial with coil
414.1	Electrical circuit	423.2	Opposed

434.1	By supply coil linked with core	444.2	Special web layering (e.g.,
434.2	Supply coil on rigid spool		offset edges)
434.3	Having material guide slidable on spool	444.3	Continuous or semicontinuous winding
434.4	Having guide ring coaxial	444.4	Adjacent helical layers (e.g., strand on strand)
424 5	with spool	444 E	
434.5	By supply coil cycling through opening	444.5	Web layer wound between helical layers
434.6	Supply coil tangentially	445	Sequential winding
	positioned on a winding	445.1	On single core
	shuttle	446	Having manual drive
434.7	By material end cycling through opening	447	Having mechanism for
121 0		4.457 1	distributing convolutions
434.8	Multistep cycle	447.1	By reciprocating guide or
434.9	Having particular core holder		supply
	or indexing means	447.2	Threaded operator
435	.On spherical core	447.3	Single winding pass
435.1	Core peripherally driven to wind	448	.Having particular workpiece holder
435.2	By roller	448.1	Core flexure inhibiter (e.g.,
436	.Modified spherical core or		for winding onto hose)
	article	470	HELICAL OR RANDOM WINDING OF
437	.On irregularly shaped core	1,0	MATERIAL
437.1	Having curvilinear or offset	471	For web material
437.1	core portions	472	On a hand tool (e.g., tatting
437.2	Diverse coils	4/2	shuttle or heddle needle)
437.2		470 1	•
	Noncircular core	472.1	.Untwisted fiber bundle (i.e.,
437.4	Flattened core	450	sliver)
438	.For prestressing core	472.2	Particular traverse of bundle
438.1	By orbiting material supply	472.3	.Of twine mass or ball
439	.By orbiting material supply	472.4	By orbital flyer
439.1	Material guide disposed about	472.5	.To form coreless package
	core tip (e.g., terminal	472.6	.By orbital flyer
439.2	winder)Motor powered	472.7	.On planar form (e.g., card, board)
439.3	Handheld	472.8	.Plural distinct strands onto
439.4	Simultaneous winding	472.0	single spool (e.g., doubling
439.5	On single core		machine)
439.6	_	472.9	•
	Supply coil coaxial with core		Having material controlled stop
440	Sequential winding	473	Break or exhaust responsive
440.1	On single core	473.1	Separating wound package from
441	Having mechanism to distribute convolutions		driver engaging package periphery
441.1	Reciprocating	473.2	Coil diameter responsive
441.2	Single winding pass	473.3	Separating wound package from
441.3	Core supports winder		driver engaging package
441.4	Material supply coaxial with		periphery
	core	473.4	.Including wound package or empty spool handling
442	Handheld wrapping tool	473.5	Removing wound package from or
443	.By rotating core	413.3	
443.1	Simultaneous winding		loading empty spool onto a
444	On single core	172 C	winding station
444.1	Dielectric and conductive	473.6	Carriage-mounted handling
	layers (e.g., capacitor)		device

473.7	Including additional material manipulation	476.5	Including particular material end gripper
473.8	Including additional material manipulation	476.6	Including particular material end gripper
473.9	By ejector	476.7	.Distributing material along the
474	Loading supply package on or	470.7	package
4/4	removing empty spool from	476.8	High frequency, low amplitude
	unwinding station	1,0.0	traverse superposed on low
474.1	On a tray with vertical spool		frequency high amplitude
	support		traverse
474.2	Including additional material	476.9	Rotating take-up having
	manipulation		radially movable guide
474.3	.Alternately or sequentially	477	Material guide pressed against
	wound spools		wound package
474.4	Spools on parallel spindles	477.1	Preventing package end ridge
474.5	Spindles on indexable turret	477.2	By shifting the traversing
474.6	Coil engaging drive (i.e.,		stroke of guide
	peripheral drive)	477.3	By varying the traversing
474.7	Including particular material		speed of guide
	snagger	477.4	Preventing superposed
474.8	Coaxial spools		convolutions in successively
474.9	On separately driven spindles		wound layers (i.e., ribbon
475	Including particular material	400 6	breaker)
	snagger	477.5	By control of guide
475.1	.Joining ends of material (e.g.,	477.6	Guide traverse speed
455.0	knotting, splicing)	477.7	By control of take-up
475.2	On carriage movable between	477.8 477.9	Take-up rotational speedTraverse speed dependent on
475 2	plural winding stations	4//.9	direction of motion
475.3	Plural winding stations movable	478	Forming symmetrical layer
	to fixed position joining means	478.1	Stepwise (i.e., orthocyclic)
475.4	Including particular joining	478.2	With distribution monitor and
173.1	structure or control	170.2	correction or indication
475.5	Including inspection or	478.3	By relatively reciprocating
	detection of material ends or		ring rail having an orbital
	of joined ends		guide
475.6	Including particular material	478.4	Long traverse stroke (e.g.,
	end transfer to joining means		wrap wind)
475.7	.Including positioning of	478.5	Guide stroke limit shifted
	material outer end on wound		along package
	package	478.6	Short traverse stroke shifted
475.8	Including outer end and removal		along package (e.g., weft
	and repositioning on package	400 0	wind)
475.9	Inserting material end within package	478.7	Including forming an initial reserve coil
476	.Material outer end removed from	478.8	By control of traverse
470	package	478.9	By use of auxiliary cam
476.1	.Including particular material to	479	Including varying rate of
	spool connection		shifting of stroke limits
476.2	By separate preliminary wind	479.1	Including varying of stroke
476.3	Preliminary wind overwraps		length
	material end	479.2	By progressive shifting of
476.4	Prior to material introduction		constant traverse stroke
	to traverse guide	479.3	Long traverse stroke (e.g.,
			bobbin tapered at both ends)

479.4	On bobbin having cylindrical and frusto-conical portions	482.5	Rotatable guide following stationary cam (e.g., guide on
479.5	Short traverse stroke		nut on threaded shaft)
479.6	Guide stroke moves	482.6	Driven by cam-contacting lever
	progressively along axially	482.7	Adjustable throw lever
	stationary package	482.8	Rotary cam and linearly
479.7	Having progression roller		shifted follower
	engaging package periphery	482.9	Threaded cam
479.8	Including formation of an	483	Grooved spool and follower
	initial reserve coil	483.1	Threaded cams with split nut
479.9	Including material controlled		cam followers
	stop	483.2	Having electrical switching
480	Break or exhaust responsive		device
480.1	Wound material sensor	483.3	Having reversible cam drive
480.2	Forming plural wound packages	483.4	Alternately engageable
480.3	Including particular presser		drives (e.g., alternately
	or shaper for package as it is		operated clutches)
	wound	483.5	Reversely threaded (i.e.,
480.4	Progressive variation of guide		cam having opposite threads)
	stroke length (e.g., at least	483.6	Having irregularly threaded
	one end of package tapered)		portion (e.g., forming tapered
480.5	By lever guided in inclined		package)
	rail	483.7	Details of follower
480.6	By lever having variable pivot	483.8	Guide driven by rotating crank
480.7	On double-headed spool		or eccentric
480.8	Manually adjustable traverse	483.9	Guide on driven oscillating
480.9	Servo-driven guide following		lever
	moving pattern	484	By shifting spool
481	Using fluid (fluid motor or	484.1	Cam shifting mechanism
	direct fluid action)	484.2	Self traversing (i.e., guide
481.1	By pneumatic jet distributor	404.0	moved by material)
481.2	Using magnetic device	484.3	Toggling guide bar
481.3	Endless loop mechanism	484.4	Follower engaging wound
481.4	Single guide on endless loop	404 5	material
481.5	Guide strikes material from	484.5	Traverse drive motor mounted on
101 6	opposite sides	4046	guide
481.6	Counter moving guides (e.g.,	484.6	.Including particular drive
401 7	pins) striking material	484.7	Associated with sewing machine
481.7	Counter moving guides (e.g.,		drive for forming wound
401 0	pins) striking material		<pre>package for sewing machine shuttle</pre>
481.8	By cam engaging material	484.8	Having material controlled
481.9	Cam is grooved material-	404.0	stop
400	receiving spool	484.9	Having winding state-controlled
482	Including auxiliary structure for guiding material across	404.7	stop
	cam groove intersection	485	Running material sensor
482.1	Including auxiliary structure	485.1	Having take-up package sensor
402.1	for preventing material from	485.2	Break or exhaust responsive
	moving beyond ends of grooved	403.2	(absence of material)
	cam	485.3	Separating wound package
482.2	Wear-resistant groove	100.0	from peripheral drive drum or
	structure		roll
482.3	Split drum	485.4	Thickness variation
482.4	Guide driven by cam and	-	responsive
	follower	485.5	Material length responsive

485.6	Wound material sensor	526	Transverse cutting
485.7	Coil (package) diameter	526.1	Perforating or notching
	responsive	526.2	With winding of flexible
485.8	Separating wound package		cutter
	from peripheral drive drum or roll	526.3	<pre>Special end forming (e.g., tapering)</pre>
485.9	Peripheral drive	527	Knife shiftable to sever
486	And driven spindle		material
486.1	Including details of take-up-	527.1	Within roller
	contacting drive	527.2	Cut adjacent to new core
486.2	Particular holder or support	527.3	Arcuately shiftable cutter
	for spool or wound package	527.4	With anvil or cooperating
486.3	Including speed control	_	cutter
486.4	Including drive pressure	527.5	Edge-to-edge (e.g., scissor
	regulator		type)
486.5	Manual	527.6	Rotary disk
486.6	Particular drive motor or motor	527.7	With reactive surface (e.g.,
	structure	32,7,	anvil)
486.7	Including speed control	528	.Of discrete sheets or articles
486.8	Drive engages spindle	529	.Contracting or expanding spool
486.9	Manual	323	during winding
487	Manual	530	.Simultaneous winding
487.1	.And severing	530.1	Coaxial coils
487.2	Tension variation responsive	530.2	Superposed coils
487.3	Material defect responsive	530.2	Relatively rotatable coils
487.4	Coil diameter responsive	530.3	_
487.5	-		Multiple coil groups
	Material length responsive	531	.Sequential winding stations
487.6	Severing proximate to spool	531.1	With transitional guide
487.7	Particular severing device	532	.With particular material
487.8	Bladeless	F20 4	connection to take-up
487.9	Multiple blades	532.1	To take-up leader
488	Blade and coacting anvil	532.2	Pneumatic assist
520	CONVOLUTE WINDING OF MATERIAL	532.3	Bonded (e.g., adhesive or
521	.With tearing or breaking	F20 4	water)
522	.With cutting, perforating, or notching	532.4	Material pierced by take-up component
523	Automated control	532.5	Clamp on take-up
523.1	For transverse cutting	532.6	Slotted take-up
524	Sequential cutting stations	532.7	With particular threading
524.1	Longitudinal and transverse		facility
525	severingLongitudinal cutting	533	.With spool loading or coil removal
525.1	Positionally related slitter	533.1	With particular spool supply
	and winding surface		hopper
525.2	Slitter engages winding	533.2	Pivotal transfer device
	surface	533.3	Peripheral coil support
525.3	Includes nonwound strip (e.g.,	533.4	Turret
	trimming)	533.5	With particular turret
525.4	Perforating		indexer
525.5	With particular slitter	533.6	With particular winding drive
	adjustment	533.7	Axially shifted transfer device
525.6	By rotary slitter disk	533.8	Mobile carrier (e.g., wheeled
525.7	With reactive material		vehicle)
	support surface		

534	.Detector, control, or material	548.2	Edge of running web
E24 1	responsive stop	548.3	Proximate coil end
534.1	Responsive to material path	548.4	Noncontacting (e.g., magnetic
534.2 535	Responsive to material length	550	or air)
	.With feeder		UNWINDING
535.1	<pre>Deflecting material into coil (e.g., coreless coiling)</pre>	551	.With attachment to preceding material
535.2	Variable or intermittent	552	With accumulator
535.3	Driven with take-up or supply	553	With lead end modification
535.4	Endless belt or chain		(e.g., trimming)
535.5	Special surface (e.g., toothed)	554	With automated control
536	.Winding spaced-apart	554.1	Material registration
	convolutions	554.2	Cutting
537	.Irregularly shaped take-up	554.3	Turret indexing control
538	.With coiled supply	554.4	Differentiated material
538.1	Coordinated drive of supply and take-up coils		<pre>portion (e.g., material end, tear, or signal)</pre>
538.2	With intermediate access	554.5	Drive or brake control
	station	554.6	Speed matching (e.g., new
538.3	Enclosed housing for coils		roll to running material)
538.4	Light occludent construction	555	Splicing running material
	(e.g., light sensitive film		(i.e., flying splice)
	holder)	555.1	Shift new material
539	.With particular frame	555.2	Longitudinal shift
540	.With particular drive	555.3	Between new roll and expiring
541	Driver engages coil periphery		material
541.1	With spindle driver	555.4	Stationary roll positions
541.2	Coreless	555.5	Turret support for new roll
541.3	Endless belt driver	555.6	With particular splicer
541.4	With drive pressure regulator	555.7	With peripheral drive
	(e.g., nip pressure control)	556	With particular splice means
541.5	Coil engaging pressure		(e.g., glue or pressure)
	element	556.1	Adhesive tape
541.6	Fluid actuator	557	.Mobile unwinding station (e.g.,
541.7	Fluid actuator		wheeled conveyance)
542	Plural drums	558	.With supply coil replenishment
542.1	Driven at different speeds	559	Supply coil transfer apparatus
542.2	Shiftable drum	559.1	Arcuate transfer path
542.3	With core steering means	559.2	By indexed turret
	(e.g., pivotal mounting or	559.3	Sequential coil shifting
	guide rail)	559.4	Coil vertically positioned
542.4	Particular drum	560	Reserve coil storage
543	Intermittent	560.1	With feeder from subsequent
544	Variable speed		supply
545	With clutch or releasable	560.2	Manually shifted reserve coil
	coupling	560.3	Radially shifted
545.1	Limited torque	561	Static ramp or track
546	With particular drive input	562	.With material end separator
546.1	Manual		(e.g., doctor blade or jet)
547	<pre>.Pressure element against coil (e.g., nip pressure member)</pre>	562.1	With threading along unwinding path
548	.With particular material guide or guard	563	.With detector, indicator, or control
548.1	Distributing		

563.1	<pre>Unwinding path (e.g., material alignment)</pre>	577	Individually adjustable segment or spoke
563.2	Material length	577.1	Yieldable
564	.With drive mechanism	577.2	Variable spoke alignments
564.1	Limited interval	577.3	Bodily retractable spoke
564.2	Manual crank or lever	577.4	Linearly shiftable winding
564.3	Feeder spaced from coil		surface
564.4	Roller or sprocket	578	.Axially adjustable
564.5	Coil engaging driver	578.1	Threaded operator
565	.With unwinding limit	578.2	Discrete adjustment positions
566	.With particular guide or guard	578.3	Yieldable coil support
570	COIL HOLDER OR SUPPORT (E.G.,	579	.With material end retainer
	SPINDLE, DISPENSER, OR SPOOL)	580	Outer end
571	.Radially expansible or	580.1	Edge grip or barrier pair for
	contractile		strip material
571.1	Inflatable bladder	581	With attractor (e.g., magnet or
571.2	Plural		vacuum)
571.3	Spool loading responsive	582	Preattached flexible leader
571.4	Compressible or deflectable	583	Adhesive or hook-and-pile
571.5	Longitudinal rib		fabric
571.6	Rotation responsive	584	Material penetrating (e.g.,
571.7	Wedging roller or ball		piercing)
571.8	Axially compressed elastic mass	584.1	Projection for preformed
572	Longitudinally shiftable		material opening
	operator	585	Edge grip pair for strip
573	Cam and follower		material
573.1	Surface wedge	586	Clamp
573.2	Longitudinally spaced cams	586.1	Threaded or cam operator
573.3	Opposed	586.2	Separable from coil holder
573.4	Separable (i.e., opposed	586.3	Bodily displaced
	stubs)	586.4	Pivoted
573.5	Threaded operator	586.5	About winding or parallel
573.6	Reverse thread helices		axis
573.7	Free end spindle	586.6	Resilient
573.8	Radial wedge separates	587	Apertured
	mandrel segments	587.1	Coacting with material fitting
573.9	Free end spindle		or modification
574	Shiftable linkage	587.2	Slot
574.1	Parallelogram	587.3	With special access
574.2	Mutually pivoted (e.g., lazy	588	.Randomly oriented coil holder
	tong type)		(e.g., portable)
574.3	Trapezoidal	588.1	With hand or body attachment
574.4	Center actuated, pivoted	588.2	With distinct hand grip
	linkage (e.g., umbrella type)	588.3	Dispensing container
575	Transversely shiftable operator	588.4	Unitary folded blank
575.1	Split band spreader	588.5	Light occludent construction
575.2	Geared segment	588.6	With coil supporting hub
575.3	Rotatable cam or cam follower	590	.Mounted coil holder or spindle
575.4	Hinged mandrel segment		(e.g., dispenser or mandrel)
575.5	Shiftable linkage	591	Discrete coil positions
576	With particular actuator or	592	Infinitely variable coil
	contractor		positions
576.1	Fluid	593	Axial material delivery

594	Simultaneously available	602	With convolution or layer	
	supplies		separator	
594.1	Peripherally supported coil	602.1	Helical pattern	
594.2	Coaxial	602.2	With particular lead-in or	
594.3	Coaxial coils		crossover structure	
594.4	Plural rows or array	602.3	Spiral groove (e.g., convolute	
594.5	Row		divider)	
594.6	Plural rows or array	603	With multiple coiling areas	
595	Peripheral coil support	604	Openwork	
595.1	Roller or endless belt	604.1	Wire hub and flange	
596	Opposed stub spindles	605	Stackable	
596.1	Spindle on retractable frame	606	With single or dominant flange	
	arm	607	Particular component connection	
596.2	With latch connecting	607.1	Hinged or slidable for	
E06 3	spindles	607.2	collapsing	
596.3	Pivoted or deflected frame	607.2 608	Convertible assembly	
596.4	armRetractable spindle	000	Flange to hub or another flange	
596.5	With actuator to retract	608.1	Flange rotatable on hub	
370.3	spindle	608.2	Mechanical joint or fastener	
596.6	Helical cam or threaded	608.3	Discrete fastener (e.g.,	
330.0	actuator	000.5	rivet or staple)	
596.7	Particular spindle formation	608.4	Threaded (e.g., bolt or	
596.8	Particular frame formation		screw)	
597	Free end spindle support (e.g.,	608.5	Rotatable joint (e.g.,	
597.1	cantilever)	608.6	threaded or bayonet fit)	
597.1	With releasable coil retainer	608.7	Snap fitBendable tab or crimp	
597.2	Spool forms retainer part	608.8	-	
597.3	Radially deflectable retainerRemovable retainer	000.0	Bonded (e.g., welded or cemented)	
597.4	Particular spindle formation	609	Hub components	
597.6	Spindle-to-spool bearing or	609.1	Mechanical joint or fastener	
337.0	coupling	609.2	Threaded fastener (e.g.,	
597.7	Vertical	003.2	bolt or screw)	
597.8	Particular frame formation	609.3	Rotatable joint (e.g.,	
598	Spindle disposed between	003.0	threaded or bayonet fit)	
330	supports	609.4	Bonded (e.g., welded or	
598.1	Frame with shiftable arm		cemented)	
598.2	Frame with pivoted spindle	610	Particular material or material	
598.3	Frame with removable spindle		treatment	
598.4	Shiftable spindle retainer	610.1	Sheet stock	
598.5	Particular frame formation	610.2	Foldable unitary blank	
598.6	Coil enclosure	610.3	Crimped or hemmed	
599	Spindle feature	610.4	Diverse materials	
599.1	Telescoping or meshing	610.5	Metal	
	surfaces	610.6	Plastic, rubber, or ceramic	
599.2	Spaced coil retaining or	611	With brake or drive formation	
	supporting portions	611.1	Circular rim (e.g., drum,	
599.3	Spindle-to-frame bearing or		sprocket, or ratchet)	
	coupling	611.2	Noncircular bore (e.g.,	
599.4	Spindle-to-spool bearing or		spline)	
	coupling	612	With particular bearing	
600	.Spool or core		formation	
601	With cover			

613	Particular hub or core		With retainer-spindle
640 :	formation	129.72	With guide(s)
613.1	<pre>Irregularly shaped (e.g., tapered)</pre>	129.8	.With brake for holder and/or strand
613.2	Cross sectionally	130	.For bobbins (i.e., commercial-
613.3	Flattened (e.g., card)		type strand packages)
613.4	Reinforcement feature	130.1	With spindle modified for
613.5	Flangeless core		conical bobbin
614	Flange feature	130.2	Vertically suspended spindle
614.1	Reinforcement	130.3	Pinboard (i.e., bobbin-storage
615	MATERIAL GUIDE OR GUARD		tray)
615.1	.Variable guide path	130.4	Skewer
615.11	.Fluid suspension	131	Creel

FOREIGN ART COLLECTIONS

FOR 000 CLASS-RELATED FOREIGN DOCUMENTS

Any foreign patents or non-patent literature from subclasses that have been reclassified have been transferred directly to FOR Collections listed below. These Collections contain ONLY foreign patents or non-patent literature. The parenthetical references in the Collection titles refer to the abolished subclasses from which these Collections were derived.
