Summary

Resolution Number 162, published by the Russian Government on March 15, 2007, lists several species of trees and bush that are prohibited from harvesting in Russia. This is the first government resolution aimed at preserving endangered species in Russia. During the Soviet regime, these species and other endangered plants and animals were included in the so-called Red Book, which was used as the primary basis for legislative acts. However, in the course of time the book has been used more as a consulting document rather than a regulation. Because of the increase in poaching of endangered species, the Russian government decided to address this issue by enforcing this existing list through a government resolution.
