# Time dependent CP-violating parameters in $B^0 \rightarrow \pi^+ \pi^-$ decays

$$A_{CP} = \frac{\Gamma(\overline{B^0}(\Delta t) \rightarrow \pi^+ \pi^-) - \Gamma(B^0(\Delta t) \rightarrow \pi^+ \pi^-)}{\Gamma(\overline{B^0}(\Delta t) \rightarrow \pi^+ \pi^-) + \Gamma(B^0(\Delta t) \rightarrow \pi^+ \pi^-)} = S_{\pi\pi} \sin(\Delta m_d \Delta t) + A_{\pi\pi} \cos(\Delta m_d \Delta t)$$

$S_{\pi\pi}$  :  $B^0 \overline{B^0}$  mixing induced CPV

$A_{\pi\pi}$  : direct CPV

In  $B^0 \rightarrow \pi^+ \pi^-$  decays,  $S_{\pi\pi}$  is sensitive to  $\phi_2$  ( $\alpha$ ):

$$S_{\pi\pi} = \sqrt{1 - A_{\pi\pi}^2} \sin(2\phi_2 + 2\theta)$$

$\theta$  can be determined with isospin relations

Direct CP violation  $A_{\pi\pi} \neq 0$  may occur.

## Interpretation :direct CP violation

The results support the expectation from SU(3) symmetry that
