

Goals

- Develop a clear description of the problem statement
- Develop a clear set of attributes of a plausible, sustainable energy future (not "the" solution)
- Develop a clear "action agenda" of research, public policy and other activities in the context of a new energy economy of the future that will catalyze change.
- Identify some of the institutional, technological, or economic obstacles to innovation and transformation in the energy system
- Identify some of the breakthrough developments in each of these areas that could rapidly catalyze change?
