

File : period\_4.txt           UPDATED : January 20, 1999  
Refitting and location status of Period 4 events (409 total; 79 located)

-----  
Notes : (1) The key to the "Loc/Rft" flag is as follows :

- 00 -> the event was selected as a "cat3" in the visual scan phase; it has NOT yet been REFIT NOR LOCATED
- 10 -> the event HAS BEEN LOCATED (emulsion data available); the spectrometer data has NOT been REFIT
- 01 -> the event has been REFIT and put in the refit/period\_n/output directory and is a candidate for scanning
- 11 -> the event HAS BEEN LOCATED and HAS BEEN REFIT; it is now a candidate for physics analysis
- 01 -> the event HAS BEEN REFIT, but is RETAINED, i.e. it is NOT a candidate for scanning (probably NOT in an emulsion target...)

(2) The key to the "ID" flag is as follows :

- 1 -> "looks like" a CC muon interaction
- 2 -> "looks like" a CC electron interaction
- 0 -> can't tell

-----
