

PRE-DAWN ARRIVAL - Apollo spacecraft 101 arrives at Kennedy Space Center Launch Complex 34 after an early-morning trip from the Manned Spacecraft Operations Building August 9 for mechanical mating with the Saturn IB launch vehicle. The spacecraft will be the home for as long as 10 days for Apollo VII crewmen Walter M. Schirra, Donn F. Eisele and Walter Cunningham.

## Astronaut Rescue Pact Goes to Senate for OK

The foltowing is the text of a-must overcome its differences. message from President Lyndon Johnson to the US Senate seeking the Senate's advice and consent to ratification of the Astronaut Assistance and Return Agreement between the United States and the Soviet Union: To the Senate of the United States:
Today I ask the Senate to take another step toward stable peace on this threatened earth.

I am proud to transmit, for advice and consent to ratification, the Astronaut Assistance and Return Agreement.
This Agreement proves again that a divided world can and

## RTCC Contract

 Modified for Apollo MissionsNASA has modified its contract with the IBM Corporation, Gaithersburg, Maryland, for the Real Time Computer Complex (RTCC), which will support Apollo-Lunar landing missions. The modification is valued at about $\$ 45.5$ million.
The modification definitizes a number of changes required to support the Apollo Program. Work under the contract will continue to be performed under a multiple-incentive arrangement covering cost, performance, schedule, and equipment management.
The contract, with IBM Federal System Division, Graithersburg, Maryland, includes design, development, implementation, maintenance and operation of the RTCC through June 30, 1971.
bodies the three principles guiding America's quest for peace which I discussed last month at Glassboro.
First, peace must be earned. Peace must be built in patient steps as human trust grows to meet human need. At best, it is a slow, hard job. The Astronaut Agreement comes to the Senate after five long years of painstaking negotiation between the United States, the Soviet Union, and other members of the United Nations Outer Space Committee. It is a step-and an important step-in the hopeful journey which began in this decade with the Limited Test Ban Treaty. We marked a great milestone in this journey when we signed the Non-Proliferation Treaty last week in Moscow, London, and Washington. I hope and believe we can soon advance further on this road when we sit down to talk with the Russians about the limitation and reduction of offensive and defensive strategic weapons.
Second, the path to world peace is less difficult when the United States and the Soviet Union follow it together.

The Astronaut Agreement will serve all nations, those whose mercy may save lives as well as those whose sons will risk their lives to enrich man's knowledge of his universe. But in the last account this agreement was possible because the United States and the Soviet Union resolved to work with each other.
Third, lasting peace depends not only on healing the bitter

## Apollo VIII Revamped to Omit Lunar Module Operations

Apollo Program Director Samuel Phillips last week announced that lunar module operations will be dropped from Apollo VIII - the second manned Apollo mission and the first manned mission using the Saturn V launch vehicle.

Speaking at a Washington press conference, Phillips said, "We have decided to fly the next Saturn V-No. 503-with the command and service module only and not to carry the lunar module on that flight. This decision enables us to move forward in employing the Apollo/Saturn V space system while we work out the problems that are currently delaying the checkout of lunar module 3 that we had intended to fly on 503."

Originally scheduled to be flown on Apollo VIII for manned checkout in earth orbit, LM-3 has been delayed in preflight checkout and instead will be flown aboard the third manned Apollo mission (A/S-504) with command and service modules Nos. 104.

The decision to slip the manned lunar module flight was based upon preliminary studies
that showed that many Apollo program objectives could be met through the alternate Apollo VIII command and service module mission. The final Apollo VIII mission plan will be firmed up after the first manned Apollo mission this fall-Apollo VIIwhich will complete flight qualification of the command and service modules.

Phillips held the door open for an Apollo VIII mission plan that could include deeper penetrations into space including lunar orbit, that are technically and operationally feasible with the Saturn V launch vehicle, but

LIBRARIANS - Carol Paley and Sheryl Sayles place returned books on the shelves of the MSC Technical Library as part of their assignment as library assistants. Both girls are students at Worthing high school and are among 89 local-area students in the $\mathbf{1 6 - 2 1}$ age bracket hired during the Houston Job Fair.

Preparations for the mid-October launch of Apollo VII continued at Kennedy Space Center Launch Complex 34 as Apollo spacecraft 101 this week was electrically mated to its Saturn IB launch vehicle. The command and service modules, launch escape tower and spacecraft/ lunar module adapter had been mechanically mated to the launch vehicle on August 9.
Spacecraft integrated systems tests were run last week and an interface test with the Mission Control Center at MSC was run August 21. During the same period, installation and checkout
again emphasized the impor- "It is our view in the Apollo protance of Apollo VIl mission gram that the probable flight results.
Phillips said that one important advantage of flying Apollo VIII this year is the opportunity for earlier experience in the operation of the Saturn $V$ and command and service modules than otherwise could be gained.
"We set out in June," said Phillips, "to achieve flight readiness of spacecraft 103 and LM-3 in November on our working schedule and progressively have lost time in the LM checkout plan such that as of today, we are about six weeks behind in that plan. These checkout delays that have accumulated so far clearly delay us until at least January.'

We must expect additional delays or weeks of delay beyond that which I have now already described," continued Phillips.
readiness of LM-3 is perhaps in February, but it is in the Febru-ary-March time period.
Phillips outlined for newsmen the basic concept of the Apollo VIII mission plan as one which will "go through the earth orbital checkout of the spacecraft and the upper portion of the launch vehicle which is still attached in checking out and determining the readiness for the relight of the S-IVB stage. At that point, we will separate the spacecraft from the launch vehicle. The launch vehicle will then go through the second burn maneuver of the upper stage and demonstrate the translunar burn which is the second burn of the S-IVB. The spacecraft will then fly an earth orbital mission which
(Continued on page 4)

## Apollo VII in Checkout For October Launch

of the launch vehicle flight programmer was completed and an interface test run between the programmer and MCC was run.
The Apollo VII flight crew, meanwhile, continued to bone up on mission operations in the command module simulator at Kennedy Space Center.

Additional spacecraft structural testing supporting Apollo VII was run Tuesday at MSC as airframe 099 was test dropped at the full-scale land and water impact test facility. The unmanned spacecraft was dropped with a 20 -foot-per-second vertical velocity and zero horizontal velocity to measure stress patterns on the aft heatshield. The test is one of a series of impact tests begun in March in support of Apollo VII.

Prelaunch preparation and testing for Apollo VIII also were underway at KSC as command module 103 last week completed reaction control system leak and functional tests The command module later was moved to the Manned Spacecraft Operations Building altitude chamber where it was mated to the service module.

All three stages and the instrument unit of the Apollo VIII Saturn V launch vehicle (A/S 503) are mated in High Bay 1 of the KSC Vehicle Assembly Building. A spacecraft facilities verification vehicle is mated atop the stack for test purposes. Mobile launcher swing arm compatibility tests and launch vehicle electrical systems tests were un last week.

## Your Job i̊ Focus

Pay Raise for WB Employees Pay raises will be included in the September 16th checks of MSC Wage Board employees in the Houston area. The new pay increase, ranging from 12 to 29 cents per hour, applies to nonsupervisory, leader, and supervisory Wage Board employees.

Higher rates were authorized in order to adjust wages to those paid by private industry in the

Houston area. Classification Act (GS) employees are not affected by the new wage schedules.

The effective date for the new Wage Board pay rates will be August 25, 1968. The pay period beginning on that date closes September 7, 1968.

The following wage schedules for MSC Wage Board employees are effective August 25, 1968:

| Non-Supervisory |  |  |  |  | Leader |  |  |  |  | Superisory |  |  |  |  |

1 in 8 Purchase Optional Insurance Approved in 67

Preliminary statistical information on Federal employees signing up for the $\$ 10,000$ optional life insurance offered under the Federal Employees Group Life Insurance program reveals that:

- Of the 335,000 employees electing the optional insurance ( 12.4 percent of the 2.7 million employees eligible), 64 percent are in the age group of 35 through 54 years, 27 percent in the age group under 35 , and 9 percent in the age group of 55 and older
- Eighty-five percent are men and 15 percent are women.
- As of May 31, $\$ 18.6$ million had been paid in claims for employees who died during the period from December 16, 1967 the date the law was passed, to

February 14, 1968. Additional claims for employee deaths during this period are being processed. During the 60 -day period, all employees enrolled in the FEGLI program were provided the protection of the additional $\$ 10,000$ optional insurance without payment of premiums.

- No definite pattern of relationship between salary and election of the optional insurance is established. It appears, however, that there is a higher percentage of elections among those in the higher salary brackets.

The $\$ 10,000$ optional life insurance was provided in Postal Revenue and Federal Salary Act of 1967. Full cost of this insurance is borne by the employees. There is no Government contributions.

## Grad Center Drops Course

The University of Houston has announced that ME 730 (Section 0991), Spacecraft Temperature Control, will not be offered at the Clear Lake Graduate Center during the fall semester as was originally planned. The University still plans to offer the other 19 courses listed in the August 16 Roundup provided that there is sufficient enrollment in these courses.

Prospective enrollees are reminded that registration for courses to be offered at Clear Lake is scheduled for September 6 from 9-11:30 am and from 1$3: 30 \mathrm{pm}$ in Building 30, Room 1025. Late and combination registration is scheduled for September 13 from 9-11:30 am at the same location. Classroom locations will be announced at registration, and counselors from the various departments will be available to discuss the students' programs with them.

MSC employees who have obtained necessary approvals to enroll for one of these courses on MSC Form 75 will be sent a copy of the approval of training portion of the form to present at registration.

## Vocation Counselors

## Hear Bobbie Lerdon

Barbara Lerdon of Personnel Division Employee Development Branch August 8 spoke on 'Working for the NASA Manned Spacecraft Center" before the state convention of Vocational Office Education Coordinators in Houston
Her talk outlined MSC's Vocational Office Education Program and requirements needed to qualify for permanent employment. The convention was attended by about 300 coordinators and counselors and by Texas Education Agency and State Department of Education officials.

AWARDS \& COST REDUCTION PROGRAM

Curse You, Sloppy Workmanship!

DEFECT NEMESIS - Charlie Brown's beagle Snoopy has turned in his Sopwith Camel and doffed his leather helmet and goggles to don a space helmet and become the symbol of the NASA Manned Flight Awareness Program. Instead of pursuing his old enemy the Red Baron, Snoopy now promotes error-free workmanship in manned space flight hardware in a series of posters by his creator Charles Schultz.

Fall Season
The Gulf Coast Judo League September 7 will go to the mat on their first match of the fall session at the East End YMCA at 1 pm . Matches include men's and women's kata and children's

COMPLETE TRAINING - Nine young people from New Mexico towns around the MSC White Sands Test Facility recently completed training courses provided by WSTF under the President's Youth Opportunity Campaign. The girls attended a secretarial techniques seminar and the boys attended a reliable hand-soldering course. Left to right are: Henry Parra, Las Cruces; Maria Rosella Flores, Hatch; Jesus Holguin, Las Cruces; Wanda Samples, Las Cruces; Norma Alvarez, Salem; Lupe Lozano, Las Cruces; Mary Sarta, Las Cruces; Robert Torres, Hatch; and Elma Gallegos, Las Cruces.

## Astronaut Rescue Pact Awaits Senate OK

(Continued from page 1) conflicts of today, but also upon our skill and imagination in building for a brighter tomorrow.
This Agreement is a striking example of this principle. For it properly looks beyond the old divisions of history and ideology to recognize the challenges of common peril and the benefits of common action.

Only seven short years have passed since Alan Shepard and Yuri Gagarin made their pioneering flights into space. There have been moments of majestic triumph - when Virgil Grissom and John Young flew our first two-man flight aboard Gemini III in March 1965, and when Cosmonaut Leonov took the first walk in space the same month.

There have been moments of tragedy, as when the world mourned the deaths of Virgil Grissom, Edward White, Roger Chaffee and Vladimir Komarov. The new Astronaut Agreement would not have saved the lives of these extraordinary and brave men, for death came within their homelands. But we must spare no effort to ensure the safety of future space pioneers who may need help in other countries or on the high seas.
Accordingly, the Agreement provides that:

- Any party who learns that an accident or emergency involving a manned flight has occurred will immediately inform the launching authority.
- A party will immediately take all possible steps to rescue an astronaut who lands in its territory and render him all necessary assistance.
- A launching authority whose astronaut makes an unplanned landing on the territory of another party will assist in search and rescue operations when its assistance will help bring about a prompt rescue.
- A party with vessels on the high seas or otherwise in a position to do so will join in search and rescue operations for a downed as ronaut.
- A party who has rescued a foreign astronaut will return him safely and promptly to the launching authority.
- A launching authority has the right to obtain the return of an object it has launched that has come down to Earth on the territory of another party.
These benefits alone recommend prompt ratification of the Astronaut Agreement. Our laws and treaties must always keep pace with our science. But the value of this Agreement goes beyond the protection it offers those who venture into space. It is also one more link in a growing chain of international cooperation which helps protect the peace of this planet.
The seven years of the Space Age began here on earth with the Berlin Wall, the harsh words at Vienna and the Cuban missile crisis. We have worked patiently and hard to improve the climate. As I said in 1966:
Our task is to achieve a reconciliation with the East-a shift from the narrow concept of coexistence to the broader vision of peaceful engagement.
I believe our successes have been impressive and hopeful: the Consular Convention -
signed in 1964 and ratified in 1968; the Civil Air Agreement - signed in 1966, with air service soon to begin; the Outer Space Treaty of 1967 ; the NonProliferation Treaty just signed on July 1 ; and the agreement to begin strategic weapons talks announced that day.

Many difficult and dangerous problems still lie unsolved before us. We must devote our energies to achieve a new advance toward peace. Humanity cannot wait where freedom from the shadow of nuclear war is concerned. We look with satisfaction to the achievement of the Non-Proliferation Treaty, and with anticipation to the forthcoming talks on the control of strategic weapons. Surely two nations who aspire to the stars can realize the common danger and act in the common interest here on earth.

The Astronaut Agreement is an action in the common interest. It helps man's reach for peace as well as his conquest of space. I earnestly hope the Senate will gives its prompt advice and consent to ratification.

Lyndon B. Johnson.
The White House, July 15, 1968.

# Llewellyn Withdraws From Flight Training 

Dr. John A. Lllewellyn, 35, has withdrawn from the astronaut training program because he was having trouble learning to fly jets.
A member of the scientistastronaut group selected in August 1967, Llewellyn has been in flight training at Reese AFB, Lubbock, Texas, since April 4 , 1968. He completed the first phase of training involving 30 flying hours in the T-41A, a propeller-driven light plane and soloed $\therefore$ : that aircraft. He had received approximately 40 hours of dual flight instruction in the T-37 jet trainer, but had not soloed.
Llewellyn said it became apparent several weeks ago that he was not progressing as he should. This week he withdrew after discussions with NASA and Air Force officials.
He said he is considering several opportunities within NASA and elsewhere.
A native of Cardiff, Wales, Llewellyn is a naturalized US citizen. He is married and has three children. He has a doctor of philosophy degree in chemistry, and prior to joining NASA, was an associate professor at Florida State University.
His departure reduces the total number of NASA astronauts to 52 . Nine of the 11 scien-

## Sustained Superior

 MSC White Sands Test Facility

## Apollo VIII Mission Drops LM/Operations <br> (Continued from page 1)

is an adaptation and in some sense an expansion of the Apollo VII mission.'
Phillips said that the final selection of the Apollo VIII mission plan hinges upon the results of the October Apollo VII mission results and their evaluation and that a wide range of mission plans were under study.
"I want to clearly state," said Phillips, "that the Apollo VIII basic mission involves operations in low earth orbit. We believe we can fly that mission in December. While we are preparing for that basic mission, we are conducting studies and pre paring plans for reasonable alternatives so that after Apollo VII flys, we can make the best deci-
sion as to whether or not to revise Apollo VIII mission objectives.'

Saturn V first stage vertical oscillation "pogo effect" and upper stage propellant line rupture problems have been corrected and fixes checked out in extensive ground testing. The problems arose during the Apollo VI mission in April, the second flight of Saturn V.
"Since then," said Phillips, "we have reproduced very accurately and fixed the failure of the J-2 engine, which, as you recall, was manifested by the failure of two engines on the second stage and the failure of the $\mathrm{J}-2$ engine on the third stage to ignite for its
reburn. That work was one of the most technically brilliant pieces of detective work in accurately reproducing and ground testing why something failed and devising a fix and demonstrating the adequacy of the fix that I have seen in many, many years."

Crew assignments for the first two Saturn V manned Apollo missions have been transposed. Apollo VIII crewmen are Frank Borman, James Lovell and William A. Anders. The prime crew originally assigned to the first Saturn $V$ manned Apollo mission-James A. McDivitt, David R. Scott and Russell L. Schweickart - will move with LM-3 to the A/S-504 mission.
tist-astronauts selected last year are now in flight training. Dr. Brian T. O'Leary, 28, withdrew April 23 because he disliked flying.

## Lifting Body Nearing First Powered Flight

The HL-10 lifting body has completed a two-month period of preparation for its first rocketpropelled flight.

The HL-10 is a wingless craft under flight test by NASA for possible use as a maneuverable reentry spacecraft of the future. The HL-10 already has made nine unpowered glide flights. The research vehicle is launched from under the wing of a B-52 at $45,000 \mathrm{ft}$. altitude.

During the past two months engineers at NASA's Flight Research Center, Edwards, Calif. activated and made several ground runs of the XLR-11 rocket engine installed in the HL-10. The rocket engine and its propellant tanks were carried in the HL-10 during the glide flights for ballast purposes.
Minor changes in the control system were made while the HL-10 was grounded.
Starting within the next few days, the HL-10 is programmed to make a captive, a planned nolaunch flight, several glide flights to check the control system changes, and then begin powered flight. The first rocket-propelled flight will use only two of the engine's chambers and speed brakes to limit the top speed to approximately 550 miles per hour.

## Spanish Club Sees Film on Mayans

The MSC Spanish Club September 4 will present an hourlong color film, "My People, the Mayas," which will illustrate the lost glories of the once-powerful Mayan empire of southern Mexico.

The meeting will be in Room 108 Bldg 13 at $5: 15 \mathrm{pm}$.

## Hess to Speak At AAS Meet

MSC Director of Science and Applications Dr. Wilmot N . Hess September 17 will speak on "Future Lunar Exploration" at the American Astronautical Society conference on advanced space exploration at Ann Arbor, Mich.

The AAS conference will run September 16-18 at the Sheraton Motor Inn Ann Arbor. Also on the program are seven other NASA speakers from NASA Headquarters, Goddard Space Flight Center, Ames Research Center and Langley Research Center.
