Copies 105026 c.1: DOCUMENT ROOM - ROOM 209 [status: IN]

Description 61 p.

Item Type REPORT

Abstract The Coast Guard's 110-foot patrol boats are used for a number of missions, such as enforcement of fisheries laws, and the interdiction of migrants and illicit drugs. As part of the Coast Guard's initial plans to replace many of its vessels, it intended to convert its 110-foot patrol boats into 123-foot patrol boats with increased capabilities until the replacement vessel, the Fast Response Cutter (FRC), became operational. However, structural problems on the eight converted 123-foot boats led the Coast Guard to remove these boats from service. Faced with a loss of operational hours, especially in the Coast Guard's Florida-based District 7 where these boats operated, the Coast Guard implemented mitigation strategies to recover lost operational hours. This report provides information on Coast Guard patrol boat operations and, in particular, addresses: (1) operational challenges created by the removal from service of the 123-foot patrol boats and the Coast Guard's strategies for mitigating their loss; (2) effects these mitigation strategies have had on overall Coast Guard operational hours, as well as operating and maintenance costs, patrol boat crews, and mission performance; and (3) issues that could affect the sustainability of these strategies. To conduct its work, GAO analyzed data and other documentation on patrol boat operations and mitigation strategies, and interviewed Coast Guard officials.

Description 15 p.

Item Type REPORT

Abstract Since its inception in November 2001, the Transportation Security Administration (TSA) has focused much of its efforts on aviation security, and has developed and implemented a variety of programs and procedures to secure the commercial aviation system. TSA funding for aviation security has totaled about \$26 billion since fiscal year 2004. This testimony focuses on TSA's efforts to secure the commercial aviation system through passenger screening, strengthening air cargo security, and watch-list matching programs, as well as challenges that remain. It also addresses crosscutting issues that have impeded TSA's efforts in strengthening security. This testimony is based on GAO reports and testimonies issued from February 2004 through July 2008 including selected updates obtained from TSA officials in June and July 2008.

Description 26 p.
Item Type REPORT
Abstract Technological advances have led to an increasing convergence of previously separate networks used to transmit voice and data communications. While the benefits of this convergence are enormous, such interconnectivity also poses significant challenges to our nation's ability to respond to major disruptions. Two operations centers--managed by the Department of Homeland Security's (DHS) National Communications System and National Cyber Security Division--plan for and monitor disruptions on voice and data networks. In September 2007, a DHS expert task force made three recommendations toward establishing an integrated operations center that the department agreed to adopt. To determine the status of efforts to establish an integrated center, GAO reviewed documentation, interviewed relevant DHS and private sector officials, and reviewed laws and policies to identify DHS's

responsibilities in addressing convergence.

Description 71 p.
Item Type REPORT
Abstract Since 2002, the Department of Homeland Security (DHS) has distributed almost \$20 billion in funding to enhance the nation's capabilities to respond to acts of terrorism or other catastrophic events. In fiscal year 2007, DHS provided approximately \$1.7 billion to states and urban areas through its Homeland Security Grant Program (HSGP) to prevent, protect against, respond to, and recover from acts of terrorism or other catastrophic events. As part of the Omnibus Appropriations Act of 2007, GAO was mandated to review the methodology used by DHS to allocate HSGP grants. This report addresses (1) the changes DHS has made to its risk-based methodology used to allocate grant funding from fiscal year 2007 to fiscal year 2008 and (2) whether the fiscal year 2008 methodology is reasonable. To answer these questions, GAO analyzed DHS documents related to its methodology and grant guidance, interviewed DHS officials about the grant process used in fiscal year 2007 and changes made to the process for fiscal year 2008, and used GAO's risk management framework based on best practices.

 Description 78 p.
 Item Type REPORT
 Abstract First responders are responsible for responding to
 terrorist-related and accidental releases of CBRN
 materials in urban areas. Two primary tools for
 identifying agents released and their dispersion and
 effect are equipment to detect and identify CBRN agents
 in the environment and plume models to track the
 dispersion of airborne releases of these agents. GAO
 reports on the limitations of the CBRN detection
 equipment, its performance standards and capabilities
 testing, plume models available for tracking urban
 dispersion of CBRN materials, and information for
 determining how exposure to CBRN materials affects urban
 populations. To assess the limitations of CBRN
 detection equipment and urban plume modeling for first
 responders' use, GAO met with and obtained data from
 agency officials and first responders in three states.

 Description 22 p.
 Item Type REPORT
 Abstract From the terrorist attacks of September 11, 2001, to

Hurricane Katrina, homeland security risks vary widely. The nation can neither achieve total security nor afford to protect everything against all risks. Managing these risks is especially difficult in today's environment of globalization, increasing security interdependence, and growing fiscal challenges for the federal government. Broadly defined, risk management is a process that helps policymakers assess risk, strategically allocate finite resources, and take actions under conditions of uncertainty. GAO convened a forum of 25 national and international experts on October 25, 2007, to advance a national dialogue on applying risk management to homeland security. Participants included federal, state, and local officials and risk management experts from the private sector and academia. Forum participants identified (1) what they considered to be effective risk management practices used by organizations from the private and public sectors and (2) key challenges to applying risk management to homeland security and actions that could be taken to address them. Comments from the proceedings do not necessarily represent the views of all participants, the organizations of the participants, or GAO. Participants reviewed a draft of this report and their comments were incorporated, as appropriate.

REPORT

This Seismic Research Program Plan describes a subset of the research programs, projects, and tasks that the Office of Nuclear Regulatory Research (RES) is currently conducting or planning to support the mission of the U.S. Nuclear Regulatory Commission (NRC). Specifically, this subset encompasses research endeavors in the areas of seismic design of structures, systems, and components (SSCs), as well as in the areas of seismic and tsunami related hazard evaluations for nuclear facilities. This plan covers research to be undertaken during Fiscal Years (FY) 2008-2011. The previous version of the research plan covered FY 2006-2009. In describing the

various research programs, projects, and tasks, this program plan discusses the specific technical areas to be addressed, as well as the underlying rationales, expected products, projected schedules, and estimated resource requirements. In so doing, this plan divides the project descriptions into the four areas of (1) Natural Hazard Research, (2) Earthquake Engineering Analysis and Design, (3) Cooperative International Research Activities, and (4) Regulatory Guide Updates.

Item Type REPORT

Abstract The Coast Guard's Deepwater Program, under the Department of Homeland Security (DHS), has experienced serious performance and management problems. Deepwater is intended to replace or modernize Coast Guard vessels, aircraft, and the communications and electronic systems that link them together. As of fiscal year 2008, over \$4 billion has been appropriated for Deepwater. The Coast Guard awarded a contract in June 2002 to a lead system integrator, Integrated Coast Guard Systems (ICGS), to execute the program using a system-of-systems approach. In response to a Senate report accompanying a Department of Homeland Security appropriations bill, 2008, this GAO report assesses whether the changes the Coast Guard is making to its management and acquisition approach to Deepwater will put it in a position to realize better outcomes. GAO reviewed key program documents and interviewed Coast Guard and contractor personnel.

Item Type REPORT
Abstract

On July 17, 2007, at about 9 a.m., an explosion and fire occurred at the Barton Solvents Wichita facility in Valley Center, Kansas. Eleven residents and one firefighter received medical treatment. The incident triggered an evacuation of Valley Center (approximately 6,000 residents); destroyed the tank farm; and significantly interrupted Barton's business. An investigation by the U.S. Chemical Safety and Hazard Investigation Board (CSB) has concluded that the initial explosion occurred inside a vertical above-ground storage tank that was being filled with Varnish Makers' and Painters' (VM&P) naphtha. VM&P naphtha is a National Fire Protection Association (NFPA) Class IB flammable liquid that can produce ignitable vapor-air mixtures inside tanks and, because of its low electrical conductivity, can accumulate dangerous levels of static electricity. The CSB is publishing this Case Study to help companies understand the hazards associated with static-accumulating flammable liquids that can form ignitable vapor-air mixtures inside storage tanks. In addition, the CSB wants to urge companies to take extra precautions to prevent explosions and fires like the one at Barton. This Case Study also examines industry Material Safety Data Sheet (MSDS) hazard communication practices and makes recommendations to ensure that MSDSs identify these hazards and outline appropriate precautions.

 Description 24 p.
 Item Type REPORT
 Abstract In 2005, GAO placed the issue of information sharing for homeland security on its high-risk list of federal functions needing broad-based transformation and since then has monitored the government's progress in resolving barriers to sharing. This testimony discusses three key information sharing efforts: (1) the actions that have been taken to guide the design and implementation of the Information Sharing Environment (ISE) and to report on its progress, (2) the characteristics of state and local fusion centers and the extent to which federal efforts are helping to address some of the challenges centers reported, and (3) the progress made in developing streamlined policies and procedures for designating, marking, safeguarding, and disseminating sensitive but unclassified information. This testimony is based on GAO's products issued from March 2006 through July 2008 and selected updates conducted in July 2008.

Item Type REPORT
Abstract The Implementation Plan for the National Strategy for Pandemic Influenza states that in an influenza pandemic, the primary response will come from states and localities. To assist them with pandemic planning and exercising, Congress has provided \$600 million to states and certain localities. The Department of Homeland Security (DHS) established five federal influenza pandemic regions to work with states to coordinate planning and response efforts. GAO was asked to (1) describe how selected states and localities are planning for an influenza pandemic and who they involved, (2) describe the extent to which selected states and localities conducted exercises to test their influenza pandemic planning and incorporated lessons learned as a result, and (3) identify how the federal government can facilitate or help improve state and local efforts to plan and exercise for an influenza pandemic. GAO conducted site visits to five states and 10 localities.

Item Type REPORT
Abstract The U.S. Mission in Mexico is the Department of State's largest consular operation. In fiscal year 2007, it processed 1.5 million of the 8 million nonimmigrant visas (NIV) State handled worldwide. The U.S. Mission in Mexico also provided services, including passport processing and emergency assistance, to 20,000 American citizens in fiscal year 2007. This already significant consular workload is expected to increase dramatically in the coming years as millions of NIV Border Crossing Cards issued in Mexico between fiscal years 1998 and 2002 expire and need to be renewed. In addition, the implementation of new travel requirements under the Western Hemisphere Travel Initiative (WHTI) will, for the first time, require U.S. citizens to carry passports, or other approved documentation, when traveling between the United States and Mexico. This testimony addresses (1) State's estimates of the workload for consulates in Mexico through 2012 resulting from, in particular, new travel requirements and the reissue of Border Crossing Cards; and (2) the actions State has taken to ensure consulates in Mexico keep pace with projected workload increases through 2012. This testimony is based on work currently in process that involves analyzing State's workload forecasts and forecast methodology, interviewing State officials, and

visiting five posts in Mexico. GAO discussed this testimony with State officials, who agreed with GAO's findings.

REPORT

Abstract
In April 2005, a Presidential Directive established the Domestic Nuclear Detection Office (DNDO) within the Department of Homeland Security to enhance and coordinate federal, state, and local efforts to combat nuclear smuggling domestically and abroad. DNDO was directed to develop, in coordination with the departments of Defense (DOD), Energy (DOE), and State (State), an enhanced global nuclear detection architecture--an integrated system of radiation detection equipment and interdiction activities. DNDO implements the domestic portion of the architecture, while DOD, DOE, and State are responsible for related programs outside the U.S. This testimony provides preliminary observations based on ongoing work addressing (1) the status of DNDO's efforts to develop a global nuclear detection architecture, (2) the challenges DNDO and other federal agencies face in implementing the architecture, and (3) the costs of the programs that constitute the architecture. This statement draws on prior GAO reviews of programs constituting the architecture, and GAO's work on strategic planning.

Item Type REPORT
Abstract On December 17, 2003, the President issued HSPD-8. HSPD-8 established national policies to strengthen the preparedness of the United States to prevent, protect against, respond to, and recover from threatened or actual terrorist attacks, major disasters, and other emergencies within the United States. HSPD-8 directed the Secretary of Homeland Security to develop a national domestic all-hazards preparedness goal in coordination with the heads of other appropriate Federal departments and agencies and in consultation with State, local, tribal, and territorial governments. The National Preparedness Guidelines (Guidelines) finalize development of the national preparedness goal and its related preparedness tools. The purposes of the Guidelines are to: (1) Organize and synchronize national (including Federal, State, local, tribal, and territorial) efforts to strengthen national preparedness; (2) Guide national investments in national preparedness; (3) Incorporate lessons learned from past disasters into national preparedness priorities; (4) Facilitate a capability-based and risk-based investment planning process; and (5) Establish readiness metrics to measure progress and a system for assessing the Nation's overall preparedness capability to respond to major

URL events, especially those involving acts of terrorism.

Item Type REPORT
Abstract The attacks on 9/11 underscored the federal government's need to facilitate terrorism-related information sharing among government, private sector, and foreign stakeholders. In response, the Intelligence Reform and Terrorism Prevention Act of 2004 mandated the creation of the Information Sharing Environment (ISE), which is described as an approach for the sharing of terrorism-related information. A presidentially appointed Program Manager oversees ISE development with assistance from the Information Sharing Council (ISC), a forum for 16 information sharing officials from federal agencies and departments. GAO was asked to report on (1) what actions have been taken to guide the design and implementation of the ISE and (2) what efforts have been made to report on progress in implementing the ISE. To perform this work, GAO reviewed related laws, directives, guidance, and ISE planning and reporting documents and interviewed officials from the Program Manager's office and key agencies who serve on the ISC.

Description 57 p.
Item Type REPORT
Abstract Under the Visa Waiver Program (VWP), citizens from 27 countries can travel to the United States visa free. Terrorism concerns involving VWP country citizens have led some to suggest eliminating or suspending the program, while the executive branch is considering adding countries to it. Legislation passed in 2007 led the Department of Homeland Security (DHS) to develop its Electronic System for Travel Authorization (ESTA), to screen VWP country citizens before they travel to the United States; if found ineligible, travelers will need to apply for a visa. GAO reviewed how (1) program elimination or suspension, (2) program expansion, and (3) ESTA could affect visa demand, resource needs, and revenues. We collected traveler, staffing, facilities, and cost data from the Department of State (State), DHS, and embassy officials and developed estimates related to the three scenarios above.

Description	186 p.
Item Type	REPORT
Abstract	This report explains the accident involving an Embraer ERJ-170, N862RW, operated by Shuttle America, Inc., which was landing on runway 28 at Cleveland-Hopkins International Airport, Cleveland, Ohio, during snow conditions when it overran the end of the runway, contacted an instrument landing system antenna, and struck an airport perimeter fence. The safety issues discussed in this report focus on (1) flight training for rejected landings in deteriorating weather conditions and maximum performance landings on contaminated runways, (2) standard operating procedures for the go-around callout, and (3) pilot fatigue policies. Safety recommendations concerning these issues are addressed to the Federal Aviation Administration.

Description	68 p.
Item Type	REPORT
Abstract	Many federal operations are supported by automated systems that may contain sensitive information such as national security information that, if lost or stolen, could be disclosed for improper purposes. Compromises of sensitive information at numerous federal agencies have raised concerns about the extent to which such

information is vulnerable. The use of technological controls such as encryption--the process of changing plaintext into ciphertext--can help guard against the unauthorized disclosure of sensitive information. GAO was asked to determine (1) how commercially available encryption technologies can help agencies protect sensitive information and reduce risks; (2) the federal laws, policies, and guidance for using encryption technologies; and (3) the extent to which agencies have implemented, or plan to implement, encryption technologies. To address these objectives, GAO identified and evaluated commercially available encryption technologies, reviewed relevant laws and guidance, and surveyed 24 major federal agencies.

Description 11 p.

Item Type PROCEEDING

Abstract On March 24, 1998, a crew of eight rural firefighters were burned over while attempting to suppress a backburning sector of the Bucklands Crossing Fire in North Otago, New Zealand. The fire demonstrates how factors typical of the New Zealand fire environment - steep slopes, highly flammable shrub fuels, and a strong foehn wind effect - combined to produce extreme fire behaviour. Several firefighters sustained varying degrees of injury. They were hit by a blowup that was most likely caused by a rapid reburn through previously underburned shrub fuels. The exact trigger for upslope spread and transition to a crown fire was not definitively identified; however, it was most likely the result of strong winds and localised turbulence, combining with steep topography and highly flammable, preheated shrub fuels. The case study report prepared on this burnover describes the activities of personnel leading up to and during the incident in relation to the fire environment and fire behaviour. Possible causes of the blowup are reviewed, and observed fire behaviour compared to that predicted by available models. Particular emphasis is placed on the contribution and alignment of fire environment factors and their role in triggering fire behaviour escalation. Aspects of firefighter safety during the incident are also discussed, including the performance of protective clothing. The findings highlight the need for increased training of firefighters in fire behaviour and, in

particular, greater situational awareness of the fire environment and indicators of extreme fire behaviour potential. The case study provides a number of lessons learned that have relevance worldwide.

Item Type REPORT
Abstract In fiscal year 2007, the U.S. Mission in Mexico (Mission Mexico) processed 1.5 million of the 8 million nonimmigrant visas (NIV) that the Department of State (State) handled worldwide. This workload is expected to increase dramatically in the coming years as millions of NIV Border Crossing Cards issued in Mexico during fiscal years 1998 to 2002 expire and need to be renewed. Consulates will also face increased workloads due to implementation of the Western Hemisphere Travel Initiative (WHTI), which will require U.S. citizens to carry passports, or other approved documentation, when traveling between the United States and Mexico, including by land. GAO was asked to review State's (1) estimates of the workload for consulates in Mexico through 2012 and (2) efforts to help ensure consulates keep pace with expected workload increases. GAO analyzed State's workload forecasts and forecast methodology, interviewed State officials, and visited five posts in Mexico.

 Description 94 p.
 Item Type BOOK
 Abstract This report provides, for each of the 54 states and territories, the identity and responsibilities of the directors of the following offices: state emergency management agency; state homeland security agency; and state adjutant general and/or military department. In states where the functions of homeland security and emergency management are combined, this is so indicated. The report also enumerates the qualifications necessary for the director position and indicates the statutory or regulatory authority under which the position exists. For each state, the researchers have retained the language used in the respective state codes and/or statutes. The authors of this report researched three primary online sources: state codes and statutes; executive orders; and Web sites of the respective agencies. In instances where laws could not be identified online, the resources of the Law Library of Congress were used. Finally, for those states/territories that did not provide the requisite information online, the researchers telephoned the relevant homeland security or emergency management office.

 Description 30 p.
 Item Type REPORT
 Abstract Although the number of Christmas tree fires is low,

these fires carry a higher level of hazard than other fires that occur in a residential structure. This study, supported by the U. S. Fire Administration, has the following three objectives: 1) characterize the heat release rate of dry Fraser fir trees, 2) demonstrate the ignition resistance of a tree with a high moisture content, and 3) examine the impact of a residential sprinkler on the heat release rate of a dry tree that is on fire in a compartment. The heat release rates of the trees which were allowed to dry ranged from 3.2 MW to 4.3 MW. Trees that were kept in water, so that the needles maintained a moisture content in excess of 100 %, self-extinguished after being exposed to a flaming book of matches. The data from the furnished sprinklered room experiment demonstrated that even under conditions of extreme fire growth, a single sprinkler was able to prevent flashover and limit the spread of fire to other objects. The peak heat release rate, from the sprinklered room, was limited to approximately 1.8 MW. The furnished non-sprinklered room experiment generated a post-flashover heat release rate in excess of 6 MW.

Description 31 p.

Item Type REPORT

Abstract The fire service is always seeking ways to improve its operations. At training classes and seminars, fire service members seek out insight into tactics and discuss new technologies for their applicability to other jurisdictions. Lessons also are learned from each response to an emergency incident. Unfortunately, many of those experiences and lessons are limited to those who were involved directly in responding. Unless feedback on incident response and command is shared with other personnel in the fire department, a valuable learning opportunity can be lost. The fire service has a duty to its members and the community it serves to evaluate problematic incidents, as well as those that go extremely well, and communicate the findings (including the lessons learned), to all relevant emergency personnel. An effective way to accomplish this is through a postincident critique. The critique can be a powerful tool for effecting change. A noted fire service expert observed that, "the post incident critique allows emergency responders to get a clear idea of the effects of their actions on the outcome of the operation. By comparing the expected outcome to the actual consequences, the fire department can make personal as well as organizational adjustments. And by assessing what worked, and what did not, improvements can be made." A critique is a fact-finding exercise and a chance to relate and record pieces of information that collectively form a picture of the event and how personnel responded from both a command (tactical) and line (operational) standpoint. It is a tool to assess firefighting, rescue, and training effectiveness, and should include tactical plans and command decisions accompanied by how well they were followed. Lessons learned from the experience should be used constructively to correct deficiencies and influence training and education. Changes made to the department's plans and procedures typically occur per the outcome of incident critiques. Management must be willing to act upon the lessons learned and correct the

problems as quickly as possible; otherwise, subordinate personnel will think the critique process is a waste of time, and future critiques could suffer accordingly. The term "critique" may carry a negative connotation for some personnel in the fire service. Critiquing an incident may be perceived as a way to assign blame for mistakes that were made. The postincident critique, (or perhaps a less threatening term such as debriefing, after-action review, or postincident analysis (PIA)) should be viewed as a constructive way to obtain helpful feedback and positive suggestions. The process should be considered an important tool for improving firefighter safety and health, as well as a means for ensuring that the public is receiving quality services.

 Description 117 p.
 Item Type DISSERTATION
 Abstract Current estimates predict that 30-40 percent of the population will be infected with the flu virus during a pandemic. Fire departments should anticipate a higher attack rate for their personnel because of increased exposure risk. Additionally, many variables will negatively influence fire fighter participation rates over and above these attack rates. This thesis analyzes fire fighters' ability and willingness to participate in a pandemic through a comprehensive survey of fire fighters within the twelve National Capital Region fire departments. Issues that may influence fire fighters' ability and willingness to work include childcare, concern of family, adequate personal protective equipment, worker's compensation coverage, and availability of vaccines and antivirals. Collectively, these variables determine a workforce participation percentage (WPP) - the share of fire fighters who will be able and willing to participate in a response during a pandemic. Results indicate that between 30-70 percent of the fire fighters will not be able or willing to work during a pandemic. Although a fire fighter's participation is situationally dependent, fire departments should take urgent steps to address five core areas. These are included in a set of recommendations. Ultimately, the priority recommendation is for fire officials and regional public policymakers to rise to the challenge of the complexity of these issues. Leadership in the face of this recognized pandemic threat, however, remains an elusive solution.

 Description 161 p.
 Item Type DISSERTATION
 Abstract Today's first responders confront a common challenge, namely the lack of exposure to and experience with

asymmetric threats (i.e., terrorism and natural disasters) in training venues that would enable them to develop familiarity with these novel situations. Different problem-solving strategies currently employed by today's first responders are described, along with situation awareness and how to best leverage first-responder experience. Literature on expert versus novice decision making, situation awareness, recognition-primed decision making, and scenario-based learning was leveraged to design the thesis experiment. Through scenario-based exercises, the thesis attempted to discover whether the decision-making skills of an experienced fire officer (expert) can be learned by newly promoted officers (novice). Results from this experiment provided insight and plausible remedies regarding today's asymmetric threats in the form of recommendations to enhance the first responder's ability to develop good situational awareness and decision making. The goal now is to use research results and recommendations as a springboard to develop training that helps a novice to effectively respond to asymmetric threats. Experiment results indicate that, by combining scenarios designed to expose novices to situations they may not experience during routine operations with timely expert feedback, an individual's decision-making skills and situation awareness can be improved.

Description 140 p.
Item Type REPORT
Abstract Hurricane Katrina was the most destructive natural disaster in U.S. history. The nation was in shock and many governmental officers and administrators as well as American taxpayers cannot help but wonder what could be done to ensure better preparation as a nation for the next formidable disaster. In fact, there have been

several official lessons learned reports and the findings and recommendations from these reports of the response to Hurricane Katrina have been addressed. These reports provided the comprehensive picture of the disaster, pinpointed many deficiency areas, and suggested a corrected course of action at the Federal, State, and local level agencies to prepare, respond, and recover from the massive disasters. Though we fully agree with the needs for better planning and preparedness, those previously reported findings and recommendations are, in general, a culmination of top-down approach based on rational decision-making system. What has been lacking in the previous reports is bottom-up approach to deal with the disaster at the scene by real people, first responders (FR), who are making a difference during the crisis. In this paper, we attempt to understand how and what types of training technologies can be provided to support and prepare our first responders to deal with such unimaginable scale of disaster. Based on our findings, we are now proposing an alternative training model that combines cognitive and behavior aspects when preparing the FR. Consequently, the third project component - developing a training module based on both engineering (cognitive readiness) and sport psychology (mental skills training) - was added.

Item Type DISSERTATION
Abstract The Fire Service is at an important crossroads in its history. The increasing threat of terrorism, along with the need for the Fire Service to make a major contribution to the Homeland Security effort, compels firefighters to expand upon their traditional mission requirements. They must deepen and widen the skills they possess for responding to all hazard incidents, and must also cover the terroristic events and weapons of mass destruction incidents that are inevitable during

this war on terrorism. This will only be possible if the Fire Service embraces major conceptual changes in the way that it trains and exercises its members. In many respects, that exercise and training system is excellent and serves as a model for other disciplines. In other ways, however, it tends to be flawed and burdensome, preventing the Fire Service from taking major strides forward in its training efforts - especially with respect to the use of metrics to objectively evaluate performance capabilities for Homeland Security-related operations, and the embedding of assessment techniques in a broader system to provide for improved performance. This thesis examines the current approach taken by the Fire Service to training and exercising, especially in the Fire Department of New York (FDNY), and identifies gaps and problems in those existing systems. Then, the thesis examines relevant "best practices" from the United States Military and the private sector that might be applied to the shortfalls in Fire Service training and exercising. The remainder of the thesis proposes changes to the training and exercise system, designed to make a measurable, sustained impact on the capabilities of the fire service to accomplish Homeland Security and traditional mission requirements.

Title	First responder weapons of mass destruction training using massively multiplayer on-line gaming
Author/Affil.	Richardson, Thomas J.
Publisher	Monterey, CA : Naval Postgraduate School
Publication Date	June 2004
Identifier	OCLC Record No.: 226319632
Subjects	WEAPONS OF MASS DESTRUCTION; EMERGENCY RESPONSE; TRAINING; GAMES; TECHNOLOGY
Biblio Notes	In partial fulfillment of the requirements for the degree of Master of Arts in Security Studies (Homeland Security and Defense)

Description	134 p.
Item Type	DISSERTATION
Abstract	This thesis proposes the development of a Massively Multiplayer On-Line Game (MMOG) to deliver Weapons of Mass Destruction Training to the nation's first responders and civilians. MMOG technology offers a cost effective alternative to existing training methodologies. Existing first responder WMD training often uses traditional in-residence classes. These current training methods are expensive, lack standardization, and do not have provable outcomes. Scaling up existing training to meet the needs of millions of responders would be cost prohibitive. Modern information technologies such as MMOGs offer a safe, efficient, effective and fun alternative mechanism

to deliver training. MMOGs could scale to meet the volume of training need at a fraction of the cost of traditional methods. The DoD has proven the effectiveness of simulation games as a training tool, and the use of gaming and simulations is recognized in academia.

Title Homeland security planning for urban area schools

Description 154 p.
Item Type DISSERTATION
Abstract Schools in the United States are at risk of a terrorist attack and the country is unprepared. The recent history of terrorist attacks illustrates that the methodology and audacity of terrorists is evolving and increasing. Terrorists no longer differentiate between civilians and military personnel, nor do they discriminate amid gender and age. While the thought of deliberately focusing an attack on children might seem unconventional, or even taboo, terrorism and terrorist tactics have fundamentally changed and terrorists are no longer fearful of taking such drastic action. This research indicates that we are unprepared and major improvements need to be made. Until serious and significant changes are made, schools remain vulnerable, unprotected targets of terrorist attacks. The consequences of inaction are enormous, being measured in the loss of lives of children. While a terrorist attack cannot always be prevented, there are actions that schools can take to enhance the safety and security of staff and students. This research culminates in specific recommendations for Maine School District 207 and highlights the strategic methodologies and practices that all schools can utilize and employ to become better prepared. A key recommendation is the inclusion of local response agencies starting with the emergency planning process.

Description 60 p.
Item Type REPORT
Abstract In this paper the benefits from fire protection
services provided by several jurisdictions in the
Washington Metropolitan Area are allocated to
jurisdictions and distributed within jurisdictions to
eight separate income classes. Benefits to
non-residents in the metropolitan area are taken into
consideration. These benefits are used to compute net
flows of fire protection benefits between the District
of Columbia and both the Maryland and Virginia suburban
jurisdictions. Two alternative assumptions are used
concerning the proportion of benefits accruing to people
as opposed to property. The first assumes that 90% of

benefits from fire protection services accrue to property and 10% accrue to people. The second assumes that 50% of benefits accrue to each. These two different proportions are used to obtain some index of sensitivity of the expenditure benefit estimates to the assumption regarding the distribution of total benefits to people and property. The study concludes that suburbanites under all different assumptions considered have a considerable net gain from D.C. through fire protection services. Estimated net flows of benefits are given.
