HURRICANE SEASON

The hurricane season extends from June through November. Hurricanes can cause excessive damage to vessels and loss of life. To minimize these dangers, the following precautions should be taken by all mariners before getting underway during the hurricane season:

- (a) Instruction of crew and passengers in location of emergency equipment and emergency procedures;
- (b) Presailing check of vessel, machinery, and equipment for seaworthiness;
- (c) Installation of strong ground tackle;
- (d) Review of storm center evasion procedures;
- (e) Knowledge of nearest hurricane shelter or port; and
- (f) Constant radio watch on channel 16 VHF-FM and frequent monitoring of weather broadcasts.

HURRICANE INFORMATION

The civilian hurricane warning service for the North Atlantic is provided by the National Hurricane Center, Miami, Florida. The center collates ship, aircraft, radar, and satellite data to produce and issue tropical cyclone warnings and forecasts for the North Atlantic Ocean, including the Caribbean Sea and the Gulf of Mexico. A Tropical Cyclone Advisory message is issued every six hours, with intermediate bulletins provided as needed.

For tropical storms and hurricanes threatening to cross the coast of the U.S., coastal warnings are issued to the public so that precautionary actions, including evacuation, can be initiated to minimize damage and loss of life. Two levels of warnings are employed:

- (a) HURRICANE WATCH - a preliminary alert that a hurricane MAY threaten a specified portion of the coast. It is issued 36 hours before landfall may occur; and
- (b) HURRICANE WARNING - which indicated that hurricane conditions are EXPECTED along a specified portion of the coast. It is issued 24 hours before landfall. To provide additional information for maritime interests, a Marine Advisory is also issued which provides storm position forecasts for up to 72 hours in advance of a storm, and probabilities of hurricane strikes for coastal locations and offshore coordinates.

Mariners are reminded that aids to navigation, particularly lighted and unlighted buoys, may be moved from charted position, damaged, destroyed, extinguished or otherwise deemed discrepant as a result of hurricanes and storms. Mariners should not rely solely upon the position or operation of an aid to navigation, but should also employ such other methods of determining position as may be available.

Mariners are further reminded that during the hurricane season drawbridges along the coast may deviate from normal operating procedures. Drawbridges are authorized to remain closed upon approach of gale force winds of 34 knots or greater. Others may be authorized to extend closed periods prior to gale force winds to facilitate evacuation of land traffic or close operations up to 8 hours before expected arrival of gale force winds. Due to the uncertainty of hurricane movements and bridge closures, mariners are urged to seek passage through drawbridges well in advance of the arrival of gale force winds.

FLORIDA-SEACOAST-BETHEL SHOAL TO JUPITER INLET-PORT EVERGLADES: U.S. Navy Operations.

The U.S. Navy has established a simulated mine field composed of approximately 38 moored and bottom inert units which will remain in the water for approximately two years. Minimum case depth of the moored units is 600 feet below the surface. The area is bounded by: 26°01'00.0"N 079°53'00.0"W, 26°05'00.0"N 079°53'00.0"W, 26°01'00.0"N 080°01'00.0"W, and 26°05'00.0"N 080°01'00.0"W.

FLORIDA-DRAWBRIDGES: VHF-FM Channel Change.

Drawbridges owners/operators in Florida have been encouraged by the Federal Communication Commission to use VHF-FM channel 9 for communications with vessels instead of VHF-FM channel 13. This is an attempt to reduce the congestion of VHF-FM channel 13 which is intended for vessel to vessel passing information. When using VHF-FM channel 9, all vessel operators and bridge tenders are encouraged to switch to low power for hailing or discussing bridge opening information; this will help minimize confusion for boaters especially on waterways with a large number of drawbridges located in close proximity.

IV. CHART CORRECTIONS

(Explanation of Format)

Corrective action, affecting charts, is contained in this section. Chart corrections are listed numerically by chart number, beginning with the lowest and progressing through all charts affected. The correction listed pertains to that chart only. It is up to the mariner to decide which charts are to be corrected. The following example explains the individual elements of a typical correction.

Chart number	Chart edition date	Last Local Notice to Mariners	Local Notice datum	Reference correction	Source of to Mariners	Current Notice
11534	26 th ed. 12/14/91	Last LNM 41/92		NAD 83(CG7)	06/93	
(Temp)	Myrtle Grove Sound to Fear River to Casino Creek					
	Add	Boguse Channel Light 1, Fl G 2.5s, 16 ft, 7M				32°48'00"N
	79°15'00"W					
	Corrective action	Object of corrective action	Position			

The letter (M) immediately following the chart number indicates that the correction should be applied to the metric side of the chart only. (Temp) indicates that the chart correction action is temporary in nature. Courses and bearings are given in degrees clockwise from 000 true. Bearings of light sectors are toward the light from seaward. The nominal range of lights is expressed in nautical miles (M).

FLORIDA-INTRACOASTAL WATERWAY-HILLSBORO RIVER-BISCAYNE CREEK: Special Bridge Notice.

The Coast Guard has received a request from the City of Deerfield Beach to allow a temporary change in the operating regulations of the J.D. Butler Drawbridge on Hillsboro Boulevard (SR 810) across the Intracoastal Waterway, mile 1050.0, Deerfield Beach, Broward County, Florida, to accommodate the annual Fourth of July Fireworks event.

If authorized, the proposal would allow the J.D. Butler Drawbridge on Hillsboro Boulevard (SR 810) to not open for vessel traffic from 9:00 p.m. to 11:00 p.m. on Friday, July 4, 1997. This drawbridge provides a vertical clearance of 21 feet above mean high water in the closed position and a horizontal clearance of 91 feet between fenders.

The Coast Guard is seeking comments on this proposed closure period and the effect it would have on navigation. Comments should be sent to the address on the cover of this notice and should be mailed to arrive no later than June 18, 1997. If you're unable to respond in writing you can comment by calling Brodie Rich at (305) 536-5117.

FLORIDA-INTRACOASTAL WATERWAY-ST. LUCIE INLET TO FORT MYERS AND LAKE OKEECHOBEE-OKEECHOBEE WATERWAY: Water Depths.

The U.S. Army Corps of Engineers Jacksonville advises that water depths in Lake Okeechobee are dropping and mariners should take extra care to stay within the channel. Authorized depth in Route 1 is eight feet and actual depth is 9.2 feet. Authorized depth in Route 2 is six feet and actual depth is 6.1 feet.

Due to the low level of Lake Okeechobee, actual channel depths are less than advertised. Many sections of Lake Okeechobee (Route 2) have only five feet of water available. All larger vessels are requested to transit via Lake Okeechobee (Route 1). This condition is expected to last until July.
