E Estimate based on partial or uncertain data.

NA Not available.

[P] Value data converted from national currency at estimated purchasing power parity.

R Rough estimate.

0 Nil or negligible.

- a In order to reduce distortions in group totals caused by data gaps for individual countries and years (shown as "NA"), rough approximations for all gaps are included in the totals.
- b Estimated by adding arms imports to data on military expenditures, which are believed to exclude arms purchases. However, it should be noted that the value of arms deliveries in a given year as shown in Table II (converted at current exchange rates) may differ significantly from actual expenditures on arms imports in that year.
- c Gross national product is replaced by gross domestic product.
- d This ratio is calculated from the dollar values shown in previous columns. In most cases it equals the ratio that could be calculated from national currency values, since both numerator and denominator are usually converted into dollars by the same exchange rate or other conversion factor. In the case of this country, however, the two variables are converted at differing rates, yielding a different ratio than would obtain in national currency.
- e This series or entry is believed to omit a major share of total military expenditures, probably including most expenditures on arms procurement. Table II shows estimated annual arms imports; it should be kept in mind, however, that data in Table II represent the estimated value of arms delivered in a given year, not actual expenditures on those arms.
- f Germany, (the Federal Republic of), was known as West Germany through 1990, when data for East Germany ended.
- g Some part of estimated total military expenditures may not be included in central budget expenditures. The ratio of ME to CGE therefore may be overstated.
- h Unified Yemen as of 1990 is shown under Yemen (Sanaa); data for Yemen (Aden) end in 1989.
