OVERVIEW

NATIONAL SPACE GRANT COLLEGE AND FELLOWSHIP PROGRAM

In 1988, Congress enacted the National Space Grant College and Fellowship Program (also known as Space Grant). NASA's Space Grant Program funds education, research, and public service programs in all 50 States, the District of Columbia, and the Commonwealth of Puerto Rico through 52 university-based Space Grant consortia. These consortia form a network of colleges and universities, industry partners, State and local Government agencies, other Federal agencies, museum and science centers, and nonprofit organizations, all with interests in aerospace education, research, and training.

Space Grant programs emphasize the diversity of human resources, the participation of students in research, and the communication of the benefits of science and technology to the general public. Each year approximately one-third of the NASA Space Grant funds support scholarships and fellowships for United States students at the undergraduate and graduate levels. Typically, at least 20 percent of these awards go to students from underrepresented groups, and at least 40 percent go to women. Most Space Grant student awards include a mentored research experience with university faculty or NASA scientists or engineers. Space Grant consortia also fund curriculum enhancement and faculty development programs. Consortia members administer precollege and public service education programs in their States.

The 52 consortia typically leverage NASA funds with matching contributions from State, local, and other university sources, which more than double the NASA funding.

For more information, consult the Space Grant Web site at *http://education.nasa.gov/spacegrant/*

EXPERIMENTAL PROGRAM TO STIMULATE COMPETITIVE RESEARCH (EPSCOR)

In 1993, Congress enacted the NASA Experimental Program to Stimulate Competitive Research Program, known as EPSCoR. NASA EPSCoR targets States of modest research infrastructure with seed funding to enable them to develop a more competitive research and development base within their member academic institutions. The overall goal of the merit-based NASA EPSCoR is to develop academic research enterprises that are long-term, self-sustaining, and nationally competitive for non-EPSCoR dollars. This capability will, in turn, contribute to the State's economic viability.

The 20 eligible NASA EPSCoR participants are Alabama, Arkansas, Kansas, Connecticut, Idaho, Kentucky, Louisiana, Maine, Mississippi, Montana, Nebraska, Nevada, North Dakota, Oklahoma, South Carolina, South Dakota, Puerto Rico, Vermont, West Virginia, and Wyoming.

NASA EPSCoR projects are closely related to NASA's five strategic enterprises (Aerospace Technology, Biological and Physical Research, Earth Science, Human Exploration and Development of Space, and Space Science). EPSCoR researchers collaborate frequently with NASA's field installations and program offices. EPSCoR fosters cooperation among departments, across institutions, with State and local Government, and with business and industry. Program objectives include the transfer of developed technology to State industry, increased economic growth of the participating States, human resource development, and communication of the benefits of NASA research to the public.

For more information, consult the EPSCoR Web site at *http://education.nasa.gov/epscor/*
