Evaluator: Ken Wilcox Ass. - 12/14/93

**System Description:** The LDE Series provides integrated inventory, leak and alarm information thru the use of liquid and float sensors. Liquid leak sensors are designed to monitor collection sumps and annular spaces of double wall tanks. The console display is designed for quick, at-aglance comprehension of all monitoring conditions. Individual status indicators. an audible alarm and reset button are mounted on the console cover. Four programmable relay outputs (8 for LDE 740, multiple tanks) are provided for controlling external devices such as pumps, valves and remote alarms. The LDE 9000 can also monitor piping installed with secondary containment.

**Detector: Output Type** - qualitative **Sampling Freq.** - continuous **Oper. Principle** - capacitance & float

Applicability: unleaded & syn gas, n- hex, diesel, jet-A, toluene, xylene(s), water
