

**All Appropriate Inquiry - Land Acquisition Screening**  
**Worksheet 3: SITE VISIT SURVEY-VISUAL ON-SITE INSPECTION OF THE PROPERTY AND OF**  
**ADJOINING PROPERTIES**

This worksheet is intended to assist with completion of the “Site Visit Survey” portion of the All Appropriate Inquiry land acquisition screening. The AAI Rule calls for a visual on-site inspection of the subject property and facilities and improvements on the subject property, including a visual inspection of the areas where hazardous substances may be or may have been used, stored, treated, handled, or disposed. This includes a visual inspection of adjoining properties, from the subject property line, public rights-of-way, or other vantage point (e.g., aerial photography), including a visual inspection of areas where hazardous substances may be or may have been stored, treated, handled or disposed. In the unusual circumstance where an on-site visual inspection of the subject property cannot be performed because of physical limitations, remote and inaccessible location/s, or other inability to obtain access to the property, provided good faith (as defined in § 312.10) efforts have been taken to obtain such access, an on-site inspection will not be required. EPA has specified that the mere refusal of a voluntary seller to provide access to the subject property does not constitute an unusual circumstance.

In such unusual circumstances where the on-site visual inspection cannot be performed, the AAI inquiry must include: (1) Visually inspecting the subject property via another method (such as aerial imagery for large properties), or visually inspecting the subject property from the nearest accessible vantage point (such as the property line or public road for small properties); (2) Documentation of efforts undertaken to obtain access and an explanation of why such efforts were unsuccessful;

If an on-site visual inspection cannot be performed, the final report must include an assessment and comments by the environmental professional on the significance of the failure to conduct a visual on-site inspection of the subject property with regard to the ability to identify conditions indicative of releases or threatened releases on, at, in, or to the subject property, if any.

In conducting the on-site visual inspection, the staff conducting the visit must maintain a photo log and property/site map that identifies the location/s photo was taken and approximate direction of view.

To the extent that the property and on-site structures and improvements are not obstructed by water, adjacent buildings and/or structures or other physical obstructions, the following are key areas that must be noted and observed while conducting the on-site visual inspection:

- The periphery of the property shall be visually and/or physically inspected and observed.
- To the extent possible, the adjacent and surrounding properties shall be visually and/or physically observed during the site visit, so as to determine current, and if possible, past uses that may help indicate environmental conditions in connection with the adjoining/surrounding properties or the property.

- If roads or paths are present on the property, they must be walked and/or driven to determine whether it has been used as an avenue for the illegal disposal of solid and hazardous wastes or petroleum products.
- The periphery and interior of all structures on the property shall be visually and/or physically inspected and observed. This includes the accessible common areas in the structures that are expected to be used by occupants or the public, maintenance and repair areas, and the occupant spaces.
- Any current and previous areas likely to involve, or have involved, the use, treatment, storage, disposal, or generation of hazardous substances or petroleum products shall be visually and/or physically inspected and observed.
- The topographic conditions of the property shall be visually and/or physically observed and noted, as well as the general topography of the area surrounding the property that is visually and/or physically observed from the periphery of the property.
- Any sewage disposal system (on-site septic systems, cesspools, etc.) for the property shall visually and/or physically observed.
- Above ground storage tanks, or underground storage tanks or vent pipes, fill pipes or access ways indicating underground storage tanks shall be visually and/or physically observed during the site visit.
- Strong, pungent, or noxious odors shall be noted during the on-site visual inspection.
- Drains, pools or sumps containing liquids likely to be hazardous substances or petroleum products shall be described in the report to the extent visually and/or physically observed or identified from the interviews or records review.
- Electrical or hydraulic equipment known to contain PCBs or likely to contain PCBs shall be described in the report to the extent visually and/or physically observed
- Stains or corrosion on floors, walls, ceilings, soils or concrete shall be visually and/or physically observed during the on-site visual inspection, except for staining from water.
- Pits, ponds, or lagoons on the property shall be visually and/or physically observed, particularly if they have been used in connection with waste disposal or waste treatment. To the extent possible, pits, ponds, or lagoons on properties adjoining the property shall be visually and/or physically observed from the property.
- All wells (including dry wells, irrigation wells, drinking water supply wells, injection wells, abandoned wells, or other wells) shall be visually and/or physically observed.
- Known or suspected areas of on-site waste disposal shall be visually and/or physically observed.

Please note that while it is intended as a useful guide, it is not all-inclusive and does not meet all the requirements for the AAI rule.
