

## Collaborative Communication Software Applications

### Plumtree

**Plumtree** develops, markets and sells corporate portals, collaboration, content management and search software in through a product called the Enterprise Web. This technology provides users the ability to interact with different types of information and applications in one Web environment and enables users to create information and services. Additionally, Plumtree's Enterprise Web provides a multitude of products and services for their users.

Plumtree offers three ways to install their products:

1. Downloading them from a Web site
2. Copying scripts manually
3. Running a setup program

### Features:

- Connects workspaces through web-based applications
- Provides a framework for managing applications
- Integrates electronic resources such as search engines already embedded
- Compatible with many Microsoft applications as well as Lotus Notes
- Links related products for easy navigation
