ABSTRACT.....	1
1. INTRODUCTION.....	1
2. EQUIPMENT DESCRIPTION.....	2
3. MEASUREMENTS	7
3.1 Orchard Layout.....	7
3.2 Path Descriptions	8
3.3 Calibrations and Field Data	13
4. DATA ANALYSIS AND RESULTS..(28.8 GHz).....	20
4.1 Amplitude Data at 28.8 GHz	20
5. DATA ANALYSIS AND RESULTS..(30.3 GHz).....	28
5.1 Amplitude Data At 30.3 GHz	28
5.2 Bit-Error-Rate Data At 30.3 GHz	28
5.3 Impulse Response Data At 30.3 GHz	33
5.4 Frequency Spectra Data 30.3 GHz	37
6. CONCLUSIONS.....	39
7. ACKNOWLEDGMENT.....	42
8. REFERENCES.....	42

FIGURES

2.1	Block diagram of the transmitter equipment.....	4
2.2	Block diagram of the receiver equipment.....	5
3.1	Photographs of pecan orchard in the defoliated state	9
3.2	Photographs of pecan orchard in the foliated state	10
3.3	Diagram of pecan orchard layout.....	11
3.4	Received signal level and vegetation loss scans as a function of receiving antenna azimuth at 28.8 and 30.3 GHz	14
3.5	Received signal level and vegetation loss scans as a function of receiving antenna elevations at 28.8 and 30.3 GHz	16
3.6	Received signal level and vegetation loss data with corresponding bit error rate data from the 30.3 GHz link	17
3.7	Examples of impulse response data recorded from the 30.3 GHz link (no leaves)	18
3.8	Examples of frequency spectra and corresponding impulse response data from the 30.3 GHz link.....	19
4.1	Vegetation loss values as a function of trees on path (the connecting lines indicate average values). Measurements at 1 meter transmitter height	23
4.2	Vegetation loss values as function of trees on path (the connecting lines indicate average values). Measurements at 4 meters transmitter height.....	24
4.3	Vegetation loss values as a function of trees on path. These values are the average of 1-meter and 4-meter transmitter height data.....	25
4.4	Vegetation loss as a function of the number of trees on the path for 28.8 GHz at 1 meter	26
4.5	Vegetation loss as a function of the number of trees on the path for 28.8 GHz at 4 meters	27
5.1	Vegetation loss values as a function of trees on path (the connecting lines indicate average values). Measurements at 1 meter transmitter height	30
5.2	Vegetation loss values as a function of trees on path (the connecting lines indicate average values). Measurements at 4 meters transmitter height.....	31

5.3	Vegetation loss values as a function of trees on path. The values are the average of the 1 meter and 4 meter transmitter height data	32
5.4	Impulse response records for the Path 2 azimuth calibration scan at 4 meters transmitter height	34
5.5	Frequency spectra and corresponding impulse response data for calibration and 3 trees on Path 2	38
5.6	Frequency spectra and corresponding impulse response data for 3 trees and 8 trees on Path R.....	40
5.7	Frequency spectra and corresponding impulse response data for 1.8 trees and 3.3 trees on Path D	41
A.1	Amplitude data (1 meter transmitter height) at 28.8 GHz as a function of azimuth angle (no leaves)	45
A.2	Amplitude data (4 meter transmitter height) at 28.8 GHz as a function of azimuth angle (no leaves)	47
A.3	Amplitude data (1 meter transmitter height) at 28.8 GHz as a function of elevation angle (no leaves)	49
A.4	Amplitude data (4 meter transmitter height) at 28.8 GHz as a function of elevation angle (no leaves)	51
A.5	Amplitude data (1 meter transmitter height) at 28.8 GHz as a function of azimuth angle (with leaves)	53
A.6	Amplitude data (4 meter transmitter height) at 28.8 GHz as a function of azimuth angle (with leaves)	55
A.7	Amplitude data (1 meter transmitter height) at 28.8 GHz as a function of elevation angle (with leaves)	57
A.8	Amplitude data (4 meter transmitter height) at 28.8 GHz as a function of elevation angle (with leaves)	59
B.1	Amplitude data (1 meter transmitter height) at 30.3 GHz as a function of azimuth angle (no leaves)	62
B.2	Amplitude data (4 meter transmitter height) at 30.3 GHz as a function of azimuth angle (no leaves)	64
B.3	Amplitude data (1 meter transmitter height) at 30.3 GHz as a function of elevation angle (no leaves)	66

B.4	Amplitude data (4 meter transmitter height) at 30.3 GHz as a function of elevation angle (no leaves)	68
B.5	Amplitude data (1 meter transmitter height) at 30.3 GHz as a function of azimuth angle (with leaves)	70
B.6	Amplitude data (4 meter transmitter height) at 30.3 GHz as a function of azimuth angle (with leaves)	72
B.7	Amplitude data (1 meter transmitter height) at 30.3 GHz as a function of elevation angle (with leaves)	74
B.8	Amplitude data (4 meter transmitter height) at 30.3 GHz as a function of elevation angle (with leaves)	76
C.1	Bit error rate data (1 meter transmitter height) at 30.3 GHz as a function of azimuth angle (no leaves)	79
C.2	Bit error rate data (4 meter transmitter height) at 30.3 GHz as a function of azimuth angle (no leaves)	81
C.3	Bit error rate data (1 meter transmitter height) at 30.3 GHz as a function of elevation angle (no leaves).....	83
C.4	Bit error rate data (4 meter transmitter height) at 30.3 GHz as a function of elevation angle (no leaves).....	85
C.5	Bit error rate data (1 meter transmitter height) at 30.3 GHz as a function of azimuth angle (with leaves)	87
C.6	Bit error rate data (4 meter transmitter height) at 30.3 GHz as a function of azimuth angle (with leaves)	89
C.7	Bit error rate data (1 meter transmitter height) at 30.3 GHz as a function of elevation angle (with leaves)	91
C.8	Bit error rate data (4 meter transmitter height) at 30.3 GHz as a function of elevation angle (with leaves)	93
D.1	Impulse response records for the 1-tree elevation scan on Path 2 at the 4 meter transmitter height (no leaves).....	96
D.2	Impulse response records for the 1-tree azimuth scan on Path 2 at 4 meter transmitter height (no leaves).....	97
D.3	Impulse response records for the 3-tree elevation scan on Path 2 at the 4 meter transmitter height (no leaves).....	98

D.4	Impulse response records for the 3-tree azimuth scan on Path 2 at the 4 meter transmitter height (no leaves).....	99
D.5	Impulse response records for the 8-tree elevation scan on Path 2 at the 4 meter transmitter height (no leaves).....	100
D.6	Impulse response records for the 8-tree azimuth scan on Path 2 at the 4 meter transmitter height (no leaves).....	101
D.7	Impulse response records for the 11-tree elevation scan on Path 1 at the 4 meter transmitter height (no leaves).....	102
D.8	Impulse response records for the 11-tree azimuth scan on Path 1 at the 4 meter transmitter height (no leaves).....	103
D.9	Impulse response records for the 14-tree elevation scan on Path 1 at the 4 meter transmitter height (no leaves).....	104
D.10	Impulse response records for the 14-tree azimuth scan on Path 1 at the 4 meter transmitter height (no leaves).....	105
D.11	Impulse response records for the 1-tree elevation scan on Path R at the 4 meter transmitter height (no leaves).....	106
D.12	Impulse response records for the 1-tree azimuth scan on Path R at the 4 meter transmitter height (no leaves).....	107
D.13	Impulse response records for the 3-tree elevation scan on Path R at the 4 meter transmitter height (no leaves).....	108
D.14	Impulse response records for the 3-tree azimuth scan on Path R at the 4 meter transmitter height (no leaves).....	109
D.15	Impulse response records for the 8-tree elevation scan on Path R at the 4 meter transmitter height (no leaves).....	110
D.16	Impulse response records for the 8-tree azimuth scan on Path R at the 4 meter transmitter height (no leaves).....	111
D.17	Impulse response records for the 1.8-tree elevation scan on Path D at the 4 meter transmitter height (no leaves).....	112
D.18	Impulse response records for the 1.8-tree azimuth scan on Path D at the 4 meter transmitter height (no leaves).....	113
D.19	Impulse response records for the 3.3-tree elevation scan on Path D at the 4 meter transmitter height (no leaves).....	114

D.20	Impulse response records for the 3.3-tree azimuth scan on Path D at the 4 meter transmitter height (no leaves).....	115
D.21	Impulse response records for the 1-tree elevation scan on path 2 at the 4 meter transmitter height (with leaves)	116
D.22	Impulse response records for the 1-tree azimuth scan on Path 2 at the 4 meter transmitter height (with leaves)	117
D.23	Impulse response records for the 3-tree elevation scan on Path 2 at the 4 meter transmitter height (with leaves)	118
D.24	Impulse response records for the 3-tree azimuth scan on Path 2 at the 4 meter transmitter height (with leaves)	119
D.25	Impulse response records for the 8-tree elevation scan on Path 2 at the 4 meter transmitter height (with leaves)	120
D.26	Impulse response records for the 8-tree azimuth scan on Path 2 at the 4 meter transmitter height (with leaves)	121
D.27	Impulse response records for the 1-tree elevation scan on Path R at the 4 meter transmitter height (with leaves)	122
D.28	Impulse response records for the 1-tree azimuth scan on Path R at the 4 meter transmitter height (with leaves)	123
D.29	Impulse response records for the 3-tree elevation scan on Path R at the 4 meter transmitter height (with leaves)	124
D.30	Impulse response records for the 3-tree azimuth scan on Path R at the 4 meter transmitter height (with leaves)	125
