The buoy at Cove Point reported a wind gust in excess of 30 KT.

CHESAPEAKE BAY DRUM PT TO SMITH PT VA COUNTY --- LOWER HOOPERS ISLAND [38.26, -76.18]

06/01/08 17:59 EST	0		Marine Thunderstorm Wind (MG 38 kt)
06/01/08 17:59 EST	0		Source: Mesonet

The automated observation at Lower Hooper Island measured a wind gust of 38 KT.

A strong upper level disturbance moved across the Mid Atlantic during the afternoon and evening hours of June 1st. This system along with high dew points and an unstable atmosphere sparked scattered strong to severe thunderstorms. These thunderstorms produced gusty winds across the Tidal Potomac River and Maryland Chesapeake Bay. The highest wind gust of 51 knots was recorded at Point Lookout.

TIDAL POTOMAC KEY BRIDGE TO INDIAN HD MD COUNTY --- 0.2 NE RONALD REAGAN NATL ARPT [38.85, -77.04]

06/03/08 18:07 EST	0		Marine Thunderstorm Wind (MG 35 kt)
06/03/08 18:13 EST	0		Source: ASOS

The automated observation at Reagan National Airport measured a wind gust of 35 KT.

The automated observation at Raccoon Point measured a wind gust of 36 KT.

A stalled front resided across the Mid Atlantic during the afternoon and evening of June 4th, allowing moisture and instability to pool along the boundary. This combined with several strong upper level disturbances resulted in numerous thunderstorms during the afternoon and evening. Many of these thunderstorms became severe, resulting in gusty winds at or above 50 knots across the Tidal Potomac River and Maryland Chesapeake Bay.

Storm Data and Unusual Weather Phenomena - June 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

The buoy at Cambridge measured a wind gust of 35 KT.

A strong cold front moved through the Mid Atlantic states June 10th afternoon and evening. Cooler and drier air behind the front clashed with very warm and moist air ahead of it, resulting in scattered to numerous strong to severe thunderstorms. Wind gusts up to 50 knots occurred across portions of the Tidal Potomac River and Maryland Chesapeake Bay.

An automated observation at Crisfield measured a wind gust of 47 KT.

A cold front pushed into the Mid Atlantic region on June 14. With strong afternoon heating, scattered strong to severe thunderstorms developed ahead of the front in the afternoon and evening. Some of the storms produced wind gusts between 30 and 50 knots along the Tidal Potomac River and Maryland Chesapeake Bay.

The automated observation at Crisfield measured a wind gust of 34 KT.

A cold front moved into the Mid Atlantic during the afternoon of June 16. With a warm moist atmosphere in place, numerous strong to severe thunderstorms developed in the afternoon and evening. Gusty winds exceeded 40 knots across portions of the Tidal Potomac River and Maryland Chesapeake Bay. Reagan National reported a wind gust to 46 knots, while several observation points on the Chesapeake Bay gusted to 41 knots.

The buoy at Cove Point reported a wind gust in excess of 30 KT.

A cold front approached the Mid Atlantic during the afternoon of June 22. Afternoon heating contributed to strong instability that helped to focus scattered strong to severe thunderstorms ahead of a cold front. Gusty winds of 30 to 40 knots accompanied thunderstorms across the Tidal Potomac and Maryland Chesapeake Bay. A wind gust of 39 knots was recorded at Cuckold Creek.

Storm Data and Unusual Weather Phenomena - June 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A stalled front resided across the Mid Atlantic during the afternoon and evening of June 4th, allowing moisture and instability to pool along the boundary. This combined with several strong upper level disturbances resulted in numerous thunderstorms during the afternoon and evening. Many of these thunderstorms became severe. While penny sized was reported in spots, damaging winds from the thunderstorms was widespread. Ronald Reagan National Airport recorded a wind gust of 51 knots.

(DC-Z001) DISTRICT OF COLUMBIA

06/07/08 06:00 EST			0	Dense Fog
06/07/08 10:00 EST			0

Local broadcast media reported a tree down on a house on Webster Street in Northwest Washington DC.

A strong cold front moved through the Mid Atlantic states June 10th afternoon and evening. Cooler and drier air behind the front clashed with very warm and moist air ahead of it, resulting in scattered to numerous strong to severe thunderstorms. Storms that became severe brought down trees and power lines.

ST. MARY'S COUNTY --- 0.5 E COMPTON [38.27, -76.69]

Storm Data and Unusual Weather Phenomena - June 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	06/01/08 20:20 EST		0	Hail (0.75 in)
	06/01/08 20:20 EST		0	Source: Trained Spotter

A trained spotter in Compton measured penny-sized hail.

A strong upper level disturbance moved across the Mid Atlantic during the afternoon and evening hours of June 1st. This system along with high dew points and an unstable atmosphere sparked scattered strong to severe thunderstorms. A few thunderstorms resulted in downed trees and power lines.

WASHINGTON COUNTY --- SHARPSBURG [39.45, -77.75], BOONSBORO [39.50, -77.65]

06/04/08 13:44 EST	0.50M	Thunderstorm Wind (EG 87 kt)
06/04/08 14:00 EST	0	Source: NWS Storm Survey

An NWS storm survey team examined wind damage to structures and trees in an area from Sharpsburg to Keedysville to Boonsboro. A few outbuildings were destroyed and extensive tree damage was observed. Some homes sustained wind damage to their roof structures and one garage was damaged. Some of the damage to a barn, and one area of wind damage to trees between Sharpsburg and Keedysville, were severe. Many hardwood and softwood trees were snapped off at the trunks. Extensive damage was reported in Washington Monument State Park in Boonsboro, forcing the park to close for 2 weeks. All of the damage was aligned along the direction of the wind gusts and the damage was determined to be caused by straight line winds. Wind gusts to 100 mph are estimated based on the damage.

	06/04/08 14:45 EST		0	Source: NWS Storm Survey
An NWS storm survey concluded that a high end EF-0 tornado impacted portions of Chesapeake Beach in Calvert County. Maximum winds were estimated to be 85 mph. Approximately a dozen hardwood trees in the Richfield Station area were uprooted. One single family home had a 3 foot diameter poplar tree fall through the roof. Portions of roofs and siding were torn away from 10 to 20 single family homes. Tree and roof damage also occurred in the Bayview Hills area of Chesapeake Beach. In this location, siding on opposite sides of a single family home was observed. A free standing light pole in Lynwood T. Kellam Memorial Recreational Park was bent. The entire roof decking of a restaurant on bayside Road was blown away. Damages were estimated at over \$400,000.

The automated observation at Patuxent River naval Air Station measured a wind gust of 59 MPH.				
A stalled front resided across the Mid Atlantic during the afternoon and evening of June 4th, allowing moisture and instability to pool along the boundary. This combined with several strong upper level disturbances resulted in numerous thunderstorms during the afternoon and evening. Many of these thunderstorms became severe. While penny sized was reported in spots, damaging winds from the thunderstorms was widespread. An EF-0 tornado was also confirmed in the community of Chesapeake Beach in Calvert County.

ST. MARY'S COUNTY --- 0.7 SW CHINGVILLE [38.22, -76.56]

	06/07/08 23:32 EST		1K	Thunderstorm Wind (EG 50 kt)
	06/07/08 23:32 EST		0	Source: Law Enforcement

Local law enforcement reported a tree down at the intersection of Medleys Neck Road and Mulberry Road.

A very warm and humid air mass was entrenched across the Mid Atlantic during the late afternoon and evening hours of June 7th. As an upper level disturbance moved across the area, scattered strong to severe thunderstorms developed. Damaging winds brought down some trees and power lines across Maryland. The largest diameter hail recorded was quarter-sized, and occurred in Hillandale in Prince Georges County.

(MD-Z013) PRINCE GEORGES, (MD-Z014) ANNE ARUNDEL

	06/09/08 13:00 EST	2	0	Excessive Heat
	06/09/08 20:00 EST		0	

A strong ridge of high pressure set up across the eastern United States for several days in early to mid June. High temperatures reached into the mid to upper 90s across lower southern Maryland on June 9. This combined with dew points in the lower 70s allowed heat index values to reach near 105. Two heat related fatalities were reported.

Direct Fatalities: M65, M79

ST. MARY'S COUNTY --- 1.8 SE LOVEVILLE [38.35, -76.66]

	06/22/08 18:52 EST		3K	Thunderstorm Wind (EG 50 kt)
	06/22/08 18:52 EST		0	Source: Law Enforcement

Law Enforcement reported trees down near Loveville.

A cold front approached the Mid Atlantic during the afternoon of June 22. Afternoon heating contributed to strong instability that helped to focus scattered strong to severe thunderstorms ahead of a cold front. Damaging winds brought some trees and power lines down in north central Maryland. Large hail was also reported. Hail to the size of quarters fell in Spring Gap.

PRINCE GEORGE'S COUNTY --- 1.8 ESE COLLINGTON [38.96, -76.74]

Storm Data and Unusual Weather Phenomena - June 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Virginia Department of Transportation reported two trees down on Stuarts Draft Highway.

A cold front approached the Mid Atlantic during the evening of June 3. Warm, moist and unstable air developed ahead of the front, allowing scattered strong to severe thunderstorms to develop. Several reports of downed trees and power lines were received. A roof was also blown off a house in Warrenton. One thunderstorm produced heavy rainfall that resulted in flash flooding in Mitchells in Culpeper County.

CLARKE COUNTY --- 0.5 W MILLWOOD [39.07, -78.04], MILLWOOD [39.07, -78.03]

06/04/08 12:25 EST	20K	Tornado (EF1, L: 0.54 mi , W: 100 yd)
06/04/08 12:26 EST	0	Source: NWS Storm Survey

An NWS survey concluded that a small EF-1 tornado touched down in Millwood within a larger area of straight-line wind damage. Maximum winds were estimated to be 90 mph. In the Carter Hall area of Millwood, nearly all of the trees in one strand were uprooted or snapped and fell in nearly every direction.

SHENANDOAH COUNTY --- HARRISVILLE [38.95, -78.45]

06/04/08 12:30 EST	50K	Thunderstorm Wind (EG 50 kt)

FAUQUIER COUNTY --- 2.8 N DELAPLANE [38.96, -77.92], 1.4 N RECTORTOWN [38.94, -77.85]				
	06/04/08 13:19 EST		15K	Tornado (EF0, L: 4.01 mi , W: 150 yd)
	06/04/08 13:35 EST		0	Source: NWS Storm Survey
An NWS storm survey team concluded a tornado caused a 12 mile-long concentrated path of tree damage. Evidence of initial tornado damage was found in northern Fauquier County about 2 miles northeast of Rectortown along Route 715, Old Carters Mill Road just west of Atoika Road. From this point eastward, a fairly consistent path of damage was found, which included numerous uprooted and snapped off large trees. The tornado narrowly missed the town of Middleburg, passing just south of the town along Sullivans Mill Road. The tornado was at its widest point at Sullivans Mill Road and Route 626, Halfway Road, where numerous trees were damaged. The tornado then crossed into south central Loudoun County. As the tornado approached the town of Aldie, the damage path narrowed and became more scattered in coverage. There was still a good deal of damage along US Route 50 in Aldie. After passing east of Aldie near Tail Race Road, Route 621, near its intersection with US Route 50, the tornado damage path disappeared.

Storm Data and Unusual Weather Phenomena - June 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
PAGE COUNTY --- 0.9 SE LURAY [38.66, -78.46], 0.7 N FAIRVIEW [38.66, -78.43]				
	06/04/08 13:20 EST		0.24M	Thunderstorm Wind (EG 78 kt)
	06/04/08 13:25 EST		0	Source: NWS Storm Survey
An areal survey was conducted in Luray. An intermittent path of damage approximately 3 miles long from the high school to the east was caused by straight line winds from thunderstorm microbursts. Numerous trees were snapped or uprooted. One home had its tin roof and chimney blown off. Numerous barns and outbuildings were either damaged or destroyed. One mobile home was damaged. Eight parked vehicles had their windows blown out by wind blown rocks. Many power lines were also downed. The strongest wind in Luray destroyed a large well constructed 30 foot by 40 foot barn. Total structural damage by local Emergency Management was estimated to be around \$237,000.				
CLARKE COUNTY --- 0.9 SW BOYCE [39.09, -78.06]

A trained spotter reported that a 40 by 50 foot barn was blown over.				
CLARKE COUNTY --- 0.5 W MILLWOOD [39.07, -78.04]				
	06/04/08 13:25 EST		44K	Thunderstorm Wind (EG 74 kt)
	06/04/08 13:25 EST		0	Source: NWS Storm Survey
An NWS survey concluded that a severe thunderstorm created an intermittent path of damage from Millwood east northeast to where Route 7 crosses the Blue Ridge near the Shenandoah Retreat area. At least 12 homes in that area were damaged, consisting of trees into houses, siding and roof damage. Winds were estimated near 80 to 90 mph. An areal survey observed that the trees were mainly all laid out parallel to the path of the storm. Local Emergency Management estimated total damages in the eastern portion of the county to be around \$44,000.				
CLARKE COUNTY --- 0.5 W BERRYVILLE [39.15, -77.98], 4.5 ESE BERRYVILLE [39.13, -77.89]

LOUDOUN COUNTY --- 1.3 WSW SUNNY BANK [38.97, -77.72], 0.9 NE ALDIE [38.98, -77.62]

	06/04/08 13:35 EST		15K	Tornado (EF0, L: 5.42 mi , W: 150 yd)
	06/04/08 13:43 EST		0	Source: NWS Storm Survey

An NWS storm survey team concluded a tornado caused a 12 mile-long concentrated path of tree damage. Evidence of initial tornado damage was found in northern Fauquier County about 2 miles northeast of Rectortown along Route 715, Old Carters Mill Road just west of Atoika Road. From this point eastward, a fairly consistent path of damage was found, which included numerous uprooted and snapped off large trees. The tornado narrowly missed the town of Middleburg, passing just south of the town along Sullivans Mill Road. The tornado was at its widest point at Sullivans Mill Road and Route 626, Halfway Road, where numerous trees were damaged. The tornado then crossed into south central Loudoun County. As the tornado approached the town of Aldie, the damage path narrowed and became more scattered in coverage. There was still a good deal of damage along US Route 50 in Aldie. After passing east of Aldie near Tail Race Road, Route 621, near its intersection with US Route 50, the tornado damage path disappeared.

An amateur radio operator reported penny-sized hail.				
A stalled front resided across the Mid Atlantic during the afternoon and evening of June 4th, allowing moisture and instability to pool along the boundary. This combined with several strong upper level disturbances resulted in numerous thunderstorms during the afternoon and evening. Many of these thunderstorms became severe. While penny sized was reported in spots, damaging winds from the thunderstorms was widespread. EF-1 tornadoes were confirmed near Stevensville in Culpeper County, in Millwood in Clarke County and near Hartwood in Stafford County.

Stafford County Emergency Management reported a tree down southeast of Aquia.				
<p>A very warm and humid air mass was entrenched across the Mid Atlantic during the late afternoon and evening hours of June 7th. As an upper level disturbance moved across the area, scattered strong to severe thunderstorms developed. Damaging winds brought down some trees and power lines across north central Virginia. The largest diameter hail recorded was quarter-sized, and occurred in Purcellville in Loudoun County.</p>				
(VA-Z054) ARLINGTON				
	06/08/08 13:00 EST	1	0	Excessive Heat
	06/08/08 20:00 EST		0	
<p>A strong ridge of high pressure set up across the eastern United States for several days in early to mid June. High temperatures reached into the mid to upper 90s across northern Virginia on June 8. This combined with dew points in the lower 70s allowed heat index values to reach near 105. One heat related fatality in Alexandria was reported.</p>

Albemarle County Emergency Management reported trees down northeast of Afton.

A cold front pushed into the Mid Atlantic region on June 14. With strong afternoon heating, scattered strong to severe thunderstorms developed ahead of the front in the afternoon and evening. Some of the storms resulted in downed trees and power lines. In Leesburg, Virginia, nickel sized hail was also reported.

GREENE COUNTY --- 1.8 WSW QUINQUE [38.24, -78.43], 3.4 NE RUCKERSVILLE [38.26, -78.32]

06/16/08 13:42 EST	1M	Hail (3.75 in)
06/16/08 13:53 EST	0	Source: Trained Spotter

Trained spotters and broadcast media reported a significant hail storm across Greene County. Hail ranging from golf ball to baseball-sized was reported in Stanardsville, Quince and Ruckersville. Several vehicles were damaged. Nearly 30 horse trailers were destroyed at two companies. Some reported baseball-sized holes in roofs of homes and businesses. The storm left several inches of hail on the ground and snowplows were called to clear the roadways. Several crops were severely damaged to destroyed.

Trained spotters reported quarter-sized hail near Dale City.

A cold front approached the Mid Atlantic during the afternoon of June 22. Afternoon heating contributed to strong instability that helped to focus scattered strong to severe thunderstorms ahead of a cold front. Damaging winds brought some trees and power lines down in north central Virginia. Large hail was also reported. Hail to the size of quarters fell Opal and Stanley. The hail damaged 2 mobile homes near Dale City.

Trained spotter reported hail ranging from penny-sized to golf ball-sized between Keyser and Fort Ashby. A local newspaper reported that a home in Reses Mill sustained damage to the patio roof. Siding was gouged and broken, window screens torn, and a wooden fence slat busted through. A solar light was smashed. Another house sustained significant damage to its 100 year old slate roof.				
A cold front approached the Mid Atlantic during the afternoon of June 22. Afternoon heating contributed to strong instability that helped to focus scattered strong to severe thunderstorms ahead of a cold front. Damaging winds brought some trees and power lines down in the eastern panhandle of West Virginia. Large hail was also reported. Hail to the size of half dollars fell in 5 miles southwest of Fort Ashby in Mineral County.

BERKELEY COUNTY --- GERRARDSTOWN [39.37, -78.10]

	06/28/08 19:41 EST		15K	Thunderstorm Wind (EG 50 kt)
	06/28/08 19:45 EST		0	Source: Newspaper

A local newspaper reported numerous trees and power poles down in the Gerrardstown area.

Heat and humidity strengthened across the Mid Atlantic ahead of a cold front during the afternoon and evening of June 28th. This led to scattered thunderstorms which produced damaging winds in some locations across the eastern West Virginia panhandle. These winds brought down trees and power lines. Penny size hail was also reported in Charles Town.

JEFFERSON COUNTY --- 0.9 SE BARDANE [39.36, -77.84]

	06/23/08 19:04 EST		0	Hail (0.75 in)
	06/23/08 19:04 EST		0	Source: Amateur Radio

Amateur radio relayed a report of penny-sized hail near Shenandoah Junction.

A cold front over the Mid Atlantic combined with a warm and moist atmosphere sparked scattered thunderstorms during the afternoon and evening of June 23rd. Some of the thunderstorms became severe, producing damaging winds and large hail. Penny size hail occurred in Shenandoah Junction.
