## Introduction

The paper geologic map of the east part of the Pullman 1° x 2° degree quadrangle, Idaho (Rember and Bennett, 1979) was scanned and initially attributed by Optronics Specialty Co., Inc. (Northridge, CA) and remitted to the U.S. Geological Survey for further attribution and publication of the geospatial digital files. The resulting digital geologic map GIS can be queried in many ways to produce a variety of geologic maps. This digital geospatial database is one of many being created by the U.S. Geological Survey as an ongoing effort to provide geologic information in a geographic information system (GIS) for use in spatial analysis. Digital base map data files (topography, roads, towns, rivers and lakes, and others.) are not included: they may be obtained from a variety of commercial and government sources. This database is not meant to be used or displayed at any scale larger than 1:250,000 (for example, 1:100,000 or 1:24,000). The digital geologic map graphics and plot files (pull250k.gra/.hp /.eps) that are provided in the digital package are representations of the digital database.

The map area is located in western Idaho (fig. 1). This open-file report describes the geologic map units, the methods used to convert the geologic map data into a digital format, the ArcInfo GIS file structures and relationships, and explains how to download the digital files from the U.S. Geological Survey public access World Wide Web site on the Internet.

## Description of Map Units

Rember and Bennett's (1979) description of map units is provided below as a courtesy to the reader.

Qal	Alluvium (Holocene)
Qls	Landslide deposits (Holocene)
Qtg	Terrace gravels (Holocene)
Qp	Palouse loess (Pleistocene)
QTs	Quaternary-Tertiary sediments, undifferentiated
Tg	Terrace gravels (Miocene)
	Columbia River Basalt Group (Miocene)—Dark, fine-grained vesicular basalt
Tcs	Saddle Mountain Basalt
Tcw	Wanapun Basalt—Occasional phenocrysts of plagioclase and rare olivine
Tcg	Grande Ronde Basalt—Aphyric, dense, fine-grained basalt
Tci	Imnaha Basalt—Phyric, coarse-grained basalt with large plagioclase and olivine phenocrysts
Tcb	Columbia River Basalt, undifferentiated

Figure 1. Index map showing the geographic extent of the Pullman quadrangle (black fill) with respect to the Pacific Northwest.

- Tgd Granitic dikes (Oligocene and Eocene)
- Tpv Potato Hill Volcanics (Oligocene and Eocene)—Light pink to gray rhyolite and dark purple to black volcanic breccia; contains xenoliths of older metamorphic and igneous rocks
- Kamiah Volcanics (Oligocene and Eocene)
- Tka Gray to reddish vesicular andesites
- Tkq Light gray quartz latite: contains widely spaced glassy bands
- Tsy "Bovill" syenite (Oligocene and Eocene)—(May be related to Potato Hill Volcanics or Gold Hill syenite)
- Idaho Batholith (Cretaceous)
- Kiqm Quartz monzonite—Gray, medium- to coarse-grained rock with biotite and hornblende
- Kigr Granite—Gray to reddish, fine- to coarse-grained rock
- Kid Quartz diorite—Coarse-grained rock with hornblende and biotite
- Kit Tonalite—Medium-grained foliated rock containing biotite
- Kgb Gabbro—Coarse-grained plagioclase- hornblende rock
- Ki Idaho batholith, undifferentiated
- Kis Gold Hill syenite (Cretaceous)—Moderately weathered hornblende syenite
- Kodg Biotite-hornblende-plagioclase quartz dioritic orthogneiss (Cretaceous)
- Jm Metadiabase (Jurassic)—Coarse- to medium-grained hornblende-plagioclase-epidote rock
- Lucile Group (Triassic)—(After Savage, 1965)
- ^h Hurwal Formation—Upper greenstone facies; lower unit includes calcareous shale, siliceous limestone, argillite, and phyllite
- ^m Martin Bridge Formation—Light to medium gray and black massive and thin units of limestone, marble, phyllite, and sandstone
- ^l Pittsburg Formation (?)—Light gray to black, coarse marble and limestone, some quartzitic sandstone, argillite, phyllite, and chloritic schist, with basal conglomerate
- P^v Seven Devils Volcanics (Triassic and Permian)—Green to grayish green metamorphosed complex of lava flows, pyroclastics, and calcareous and noncalcareous sedimentary rocks
- ag Amphibolite and garnet amphibolite (Precambrian)—Dark, well-foliated, medium-grained plagioclase-hornblende rocks

Belt Supergroup (Precambrian)

- = l Libby Formation—Medium gray to olive-colored, thin-bedded siltite (which produces a soil similar to loess)
- = sp Striped Peak Formation—Vitreous quartzite which includes feldspathic quartzite with micaceous sheen
- = w Wallace Formation, undifferentiated
- = ws Coarse-grained, garnet-mica schist
- = wg Diopside gneiss, biotite gneiss, and biotite quartzite interbedded with schist
- = u Precambrian, undifferentiated

Ravalli Group

- = sr St. Regis Formation—Medium- to coarse-grained garnet-mica schist
- = rq Revett Formation—Thick-bedded, coarse- to medium-grained pure quartzite with thin micaceous laminae

Prichard Formation

- = ps Gray, coarse- to medium-grained garnet-mica schist
- = pq Micaceous, medium-grained granular quartzite interbedded with schist

## Data Sources, Processing, and Accuracy

The geologic map of the east half of the Pullman 1°x 2° quadrangle, Idaho, (Rember and Bennett, 1979) was originally a paper document, converted from a paper to a digital format by Optronics. Specialty Co., Inc. This initial product was remitted to the U.S. Geological Survey in an ArcInfo interchange format in scanner units. Registration points were used to transform the digital files to calculated latitude-longitude points for a Transverse Mercator map projection (see Appendix A). The digital files were then augmented with an interim geologic map data model (data base), further attributed and edited, and then plotted and compared to the original stable-base geologic map to check for digitizing and attributing errors. All processing by the U.S. Geological Survey was done in ArcInfo version 8.0 (installed on a Sun Ultra workstation).

The overall accuracy (with respect to the location of polygons) of the digital geologic map (see figs. 2 and 3 for page-size versions) is probably no better than +/-55 meters. This digital database is not meant to be used or displayed at any scale larger than 1:250,000 (for example, 1:100,000 or 1:24,000).

## GIS Documentation

The digital geologic map of the east half of the Pullman 1:250,000 quadrangle includes a geologic linework arc attribute table, PULL250K.AAT, that relates to the PULL250K.CON, PULL250K.ST2, and PULL250K.REF files and a rock unit polygon attribute table, PULL250K.PAT that relates to the PULL250K.RU and PULL250K.REF files (see fig. 4). These data files are described below.

### Linear Features

Descriptions of the items identifying linear features such as boundaries (for example, lines of latitude and longitude, state boundaries) and geologic boundaries in the arc (or line) attribute table, PULL250K.AAT, are as follows:

PULL250K.AAT			
ITEM NAME	ITEM TYPE	ITEM LENGTH	ATTRIBUTE DESCRIPTION
<b>linecode</b>	integer	3	Numeric code used to identify type of linear feature. Linecodes < 100 represent contacts and boundaries that are described in the PULL250K.CON file. Linecodes > 100 and < 600 represent structural features which are described in the PULL250K.ST2 file.
<b>name</b>	character	30	Name given to structural feature
<b>source</b>	integer	4	Numeric code used to identify the data source for the linear feature. Complete references for the sources are listed in the PULL250K.REF file.)

## List of Map Units

	Qal - alluvium		Tka - vesicular andesites, Kamiah Volcanics		Tih - Hurwal Formation, Lucile Group		pCq - Revett Formation, Ravalli Group of the Belt Supergroup
	Qls - landslide deposits		Tkq - quartz latite, Kamiah Volcanics		Tim - Martin Bridge Formation, Lucile Group		pCu - Precambrian, undifferentiated
	Qtg - terrace gravels		Tsy - Bovill syenite		Tl - Pittsburg Formation (?), Lucile Group		pCps - garnet-mica schist, Prichard Formation of the Belt Supergroup
	Qp - Palouse loess		Kiqm - quartz monzonite, Idaho Batholith		PTiv - Seven Devils Volcanics		pCpq - quartzite, Prichard Formation of the Belt Supergroup
	QTs - Quaternary-Tertiary sediments, undifferentiated		Kigr - granite, Idaho batholith		ag - amphibolite and garnet amphibolite		u - unknown
	Tg - terrace gravels		Kid - quartz diorite, Idaho batholith		pCl - Libby Formation, Belt Supergroup		
	Tcs - Saddle Mountain Basalt, Columbia River Basalt Group		Kit - tonalite, Idaho batholith		pCsp - Striped Peak Formation, Belt Supergroup		contact
	Tow - Wanapun Basalt, Columbia River Basalt Group		Kgd - gabbro, Idaho batholith		pCw - Wallace Formation of the Belt Supergroup		fault
	Tcg - Grande Ronde Basalt, Columbia River Basalt Group		Ki - Idaho batholith, undifferentiated		pCws - garnet-mica schist, Wallace Formation of the Belt Supergroup		
	Tci - Imnaha Basalt, Columbia River Basalt Group		Kis - Gold Hill syenite		pCwg - gneiss, quartzite and schist, Wallace Formation of the Belt Supergroup		
	Tcb - Columbia River Basalt Group		Kogd - biotite-hornblende-plagioclase quartz dioritic orthogneiss		pCsr - St. Regis Formation, Ravalli Group of the Belt Supergroup		
	Tgd - granite dikes		Jm - metadiabase				
	Tpv - Potato Hill Volcanics						

Figure 2. Explanation for the Simplified Digital Geologic Map of the East Part of the Pullman 1:250,000 Quadrangle

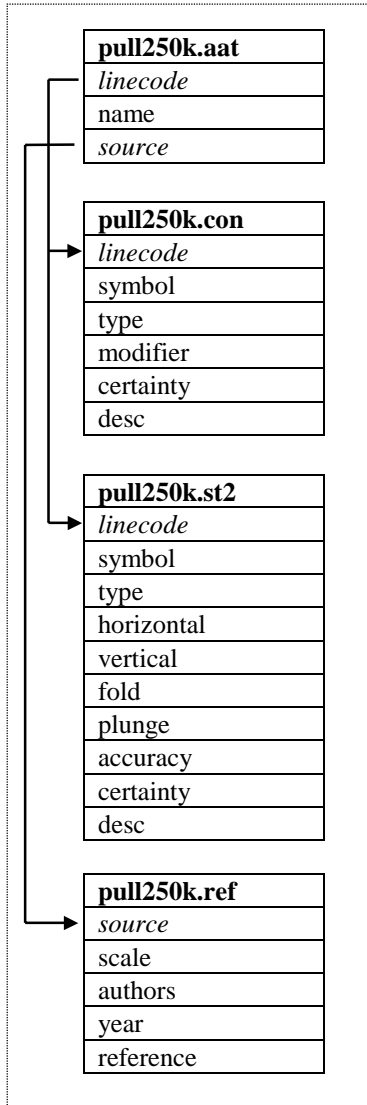

Figure 3. Simplified Digital Geologic Map of the East Part of the Pullman 1:250,000 Quadrangle

Arc attribute table and related look-up tables:

Polygon attribute table and related look-up tables:

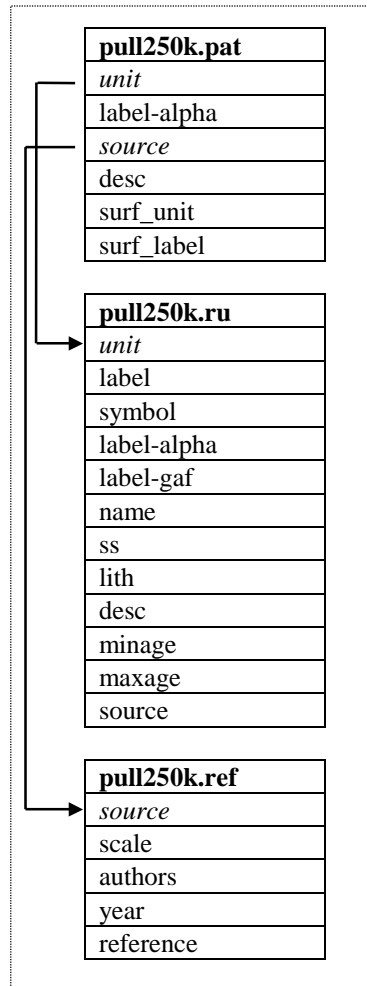

Figure 4: Relationships between feature attribute tables and look-up tables

Attribute descriptions for items in the contact (and boundary) look-table, PULL250K.CON [for use with the CARTO.LIN and GEOL\_DIA.LIN linesets], are as follows:

<b>PULL250K.CON</b>			
ITEM NAME	ITEM TYPE	ITEM LENGTH	ATTRIBUTE DESCRIPTION
<b>linecode</b>	integer	3	Numeric code (a value < 100) used to identify type of contact or boundary. (This item also occurs in PULL250K.AAT.)
<b>symbol</b>	integer	3	Line symbol number used by ArcInfo to plot lines. Symbol numbers refer to the <b>GEOL_DIA.LIN lineset</b> for linecodes gt 0 and lt 100.
<b>type</b>	character	10	Major type of line, for example, contact, state boundaries, lines of latitude and longitude used for neatlines.
<b>modifier</b>	character	20	Line type modifier, i.e., approximate, concealed, gradational. No entry implies 'known.'
<b>certainty</b>	character	15	Degree of certainty of contact or boundary, i.e., inferred, uncertain. No entry implies 'certain.'
<b>desc</b>	character	100	Written description or explanation of contact or boundary.

Attribute descriptions for items in the structure look-up table, PULL250K.ST2 [for use with the GEOL\_DIA.LIN lineset] are as follows:

<b>PULL250K.ST2</b>			
ITEM NAME	ITEM TYPE	ITEM LENGTH	ATTRIBUTE DESCRIPTION
<b>linecode</b>	integer	3	Numeric code (a value > 100 and < 600) used to identify type of structural feature. (This item also occurs in PULL250K.AAT.)
<b>symbol</b>	integer	3	Line symbol number used by Arc/Info to plot arc (line). Symbol numbers refer to the <b>GEOL_DIA.LIN lineset</b>
<b>type</b>	character	10	Major type of structure, i.e., fault, fracture, fold, other.
<b>horizontal</b>	character	20	Type of horizontal fault movement, for example, left-lateral, right-lateral. No entry implies 'unknown.'
<b>vertical</b>	character	20	Type of vertical fault movement, for example, normal. No entry implies 'unknown.'
<b>fold</b>	character	15	Type of fold, for example, anticline, syncline.
<b>plunge</b>	character	15	Type of plunge on fold, i.e., horizontal, plunging, plunging in, plunging out.
<b>accuracy</b>	character	15	Line type modifier indicating degree of accuracy, i.e., approximately located, concealed, gradational. No entry implies 'known.'
<b>certainty</b>	character	15	Degree of certainty of contact or boundary, i.e., inferred, uncertain. No entry implies 'certain.'
<b>desc</b>	character	100	Written description or explanation of structural feature.

## Areal Features

Descriptions of the items identifying geologic units in the polygon attribute table, PULL250K.PAT, are as follows:

<b>PULL250K.PAT</b>			
<b>ITEM NAME</b>	<b>ITEM TYPE</b>	<b>ITEM LENGTH</b>	<b>ATTRIBUTE DESCRIPTION</b>
<b>unit</b>	integer	4	Numeric code used to identify the rock unit which is described in the PULL250K.RU look-up table. (This item also occurs in PULL250K.RU.)
<b>label-alpha</b>	character	10	Rock unit label (abbreviation) used to label unit on map. (This item was joined from the PULL250K.RU look-up table.)
<b>source</b>	integer	4	Numeric code used to identify the data source for the rock unit. Complete references for the sources are listed in the PULL250K.REF file.
<b>desc</b>	character	100	Formal or informal unit name. (This item was joined from the PULL250K.RU look-up table.)
<b>surf_unit</b>	integer	4	Numeric code used to identify the surficial rock unit that is described in the PULL250K.RU look-up table under the item <b>unit</b> . (The item <b>surf_unit</b> does not occur in PULL250K.RU.) The attribute values for <b>surf_unit</b> are a subset of the attribute values for <b>unit</b> . This item, <b>surf_unit</b> , is attributed only when the underlying bedrock has been identified. The PULL250K.AML file does not use the value in the <b>surf_unit</b> item to create the digital geologic map files (PULL250K.GRA / .HP and PULL-MAP.PDF).
<b>surf_label</b>	character	10	Surficial rock unit label (abbreviation).

Attribute descriptions for items in the lithology (rock unit) look-table, PULL250K.RU (for use with the WPGCMYK.SHD shadeset), are as follows:

<b>PULL250K.RU</b>			
<b>ITEM NAME</b>	<b>ITEM TYPE</b>	<b>ITEM LENGTH</b>	<b>ATTRIBUTE DESCRIPTION</b>
<b>unit</b>	integer	4	Numeric code used to identify rock unit. (This item also occurs in PULL250K.PAT.)
<b>label</b>	character	10	Rock unit label (abbreviation) used to label unit on map.
<b>symbol</b>	integer	3	Shadeset symbol number used by Arc/Info to plot a filled/shaded polygon. The symbol numbers used in this file refer to the <b>WPGCMYK.SHD</b> shadeset.
<b>label-alpha</b>	character	10	Rock unit label for use with standard alphabetic characters (for example, C for Cambrian).
<b>label-gaf</b>	character	10	Rock unit label for use with GeoAgeFullAlpha font (geofont.txt) to produce special geologic age characters (for example, __ for Cambrian)
<b>name</b>	character	7	The prefix portion of the rock unit label that does not include subscripts. (If subscripting is not used in the original unit label, then the 'name' entry is the same as the 'label' entry.)
<b>ss</b>	character	3	The suffix portion of the geologic unit label that includes subscripts.
<b>lith</b>	character	20	Major type of lithostratigraphic unit, for example, unconsolidated sediments, sedimentary rocks, metasedimentary rocks, intrusive rocks, extrusive rocks, metamorphic rocks, water, ice.
<b>desc</b>	character	250	Formal or informal unit name
<b>minage</b>	character	7	Minimum stratigraphic age of lithologic unit, for example, CRET, TERT, PCY.
<b>maxage</b>	character	7	Maximum stratigraphic age of lithologic unit
<b>source</b>	character	4	Numeric code used to identify the data source for the rock unit. Complete references for the sources are listed in the PULL250K.REF file.

### Source Attributes

Descriptive source or reference information for the PULL250K ArcInfo datasets is stored in the PULL250K.REF file. Attribute descriptions for items in the PULL250K.REF data source file are as follows:

<b>PULL250K.REF</b>			
<b>ITEM NAME</b>	<b>ITEM TYPE</b>	<b>ITEM LENGTH</b>	<b>ATTRIBUTE DESCRIPTION</b>
<b>source</b>	integer	4	Numeric code used to identify the data source. (This item also occurs in the PULL250K.AAT PULL250K.PAT, and PULL250K.RU files.)
<b>scale</b>	integer	8	Scale of source map. (This value is the denominator of the proportional fraction that identifies the scale of the map that was digitized or scanned to produce the digital map.)
<b>authors</b>	character	200	Author(s) or compiler(s) of source map entered as last name, first name or initial, and middle initial.
<b>year</b>	integer	4	Source (map) publication date
<b>reference</b>	character	250	Remainder of reference in USGS reference format.

## Obtaining Digital Data

The complete digital version of the geologic map is available in ArcInfo interchange-format with associated data files. These data and map images are maintained in a Transverse Mercator map projection:

Projection:	Transverse Mercator
Units:	meters
Parameters:	
Scale factor at the central meridian:	1.00000
Longitude at the central meridian:	-117 0 0
Latitude at the origin:	0 0 0
False easting:	0
False northing:	0

To obtain copies of the digital data, do one of the following:

1. Download the digital files from the USGS public access World Wide Web site on the Internet: **URL = <http://geopubs.wr.usgs.gov/open-file/of01-262/>**  
or
2. Anonymous FTP from **geopubs.wr.usgs.gov**, in the directory **pub/ open-file/of01-262/**

The Internet sites contain the digital geologic map of the east half of the Pullman 1:250,000 quadrangle both in ArcInfo interchange-format files (pull250k.e00) and as HPGL2, encapsulated PostScript, and portable document format plot files (pull250k.hp, pull250k.eps, pull-map.pdf) of the map area, as well as the associated data files and ArcInfo macro programs which are used to plot the map at a scale of 1:250,000.

To manipulate this data in a geographic information system (GIS), you must have a GIS that is capable of reading ArcInfo interchange-format files.

## Obtaining Paper Maps

Paper copies of the digital geologic maps are not available from the U.S. Geological Survey. However, with access to the Internet and access to a large-format color plotter that can interpret HPGL2 (Hewlett-Packard Graphics Language) or PDF (portable document) files, a 1:250,000-scale paper copy of the map can be made, as follows:

1. Download the digital version of the maps, **pull250k.hp**, **pull250k.eps**, or **pull-map.pdf**, from the USGS public access World Wide Web site on the Internet using the URL = <http://geopubs.wr.usgs.gov/open-file/of01-262/>

or

2. Anonymously FTP the plot files, **pull250k.hp**, **pull250k.eps**, and/or **pull-map.pdf** from: **geopubs.wr.usgs.gov**, in the directory:  
**pub/open-file/of01-262/**

3. These files can be plotted by any large-format color plotter that can interpret HPGL2, encapsulated postscript, or PDF files. The finished plot is about 28 inches by 33 inches.

Paper copies of the map can also be created by obtaining the pull250k.aml file and then creating a plot file in ArcInfo.

## Appendix B - List of files in the Pullman GIS (packaged as of01-262.tar.Z)

- Uncompress the **of01-262.tar.Z** file and extract the files from the resultant **of01-262.tar** file.
- Use the **'importfile.aml'** in Arc/Info to IMPORT all of the \*.E00 files for use in ArcInfo.
- Use the ArcInfo **'DRAW'** command to plot the \*.GRA file to your screen. (Make sure the display is set with the ArcInfo **'DISPLAY'** command.)
- Use the ArcInfo **'HPGL2'** command to create a HPGL2 file from the \*.GRA file.
- Use the UNIX **'lpr -P<plotter\_name> pull250k.hp'** command to send the pull250k.hp file to a large-format color plotter that can interpret Hewlett-Packard Graphics Language.
- To re-create the \*.GRA file, open the ArcPlot module, enter **'display 1040'**, enter a new file name for the graphics file, enter **'&run pull250k'** (and enter **'quit'** to exit the ArcPlot module). See the 00readme.txt file for further file details.

### Report text in portable document format:

- of01-262.pdf

### Primary ArcInfo interchange-format files (\*.e00) and metadata (\*.met) files for the digital geology:

- pull250k.e00
- pull250k.met

### ArcInfo graphics (\*.gra), HPGL2 (\*.hp), encapsulated PostScript (\*.eps), and portable document format (\*.pdf) files for the geologic map sheet:

- pull250k.gra/.hp/.eps
- pull-map.pdf

### Additional ArcInfo interchange - format files (\*.e00) necessary to re-create the geologic map sheet:

- fnt026.e00 – font
- fnt037.e00 – font
- fnt038.e00 – font
- fnt039.e00 – font
- fnt040.e00 – font
- GEOAFA\_\_.FON – font file
- GEOAFA\_\_.TTF – font file
- geol\_dia.lin.e00 - lineset
- pulltm.e00 - exterior boundary of the Pullman quadrangle
- wpgcmyk.shd.e00 – shadeset

### AML, graphics, key, symbolset and text files necessary to re-create the geologic map sheet:

- scale2a.aml - plots scale bar on plate
- pull250k.aml - program that creates a graphics file of the geologic map
- indx\_pull.gra - index map graphic
- usgslogo.gra – USGS logo
- pull-lin.key – lineset symbol values and descriptive text for lines
- pull-pol.key - shadeset symbol values and descriptive text for geologic map units
- geo.prj - a text file used to identify real-world (geographic) coordinates - for use in adding latitude and longitude notation around the margins of the map quadrangle
- tvn.prj - a text file to identify Transverse Mercator map projection - for use in adding latitude and longitude notation around the margins of the map quadrangle
- cal.dat – plotter calibration text file
- pull-crd.txt - text file listing map credits
- pull-dis.txt – text file with disclaimer statement
- pull-ref.txt - text file listing map references

## Appendix C - ArcInfo Macro Language program (pull250k.aml) used to plot the geologic map

```

/* pull250k.aml, 10/24/01 hzk
/* This ArcInfo Macro Language (AML)
program will plot the geologic map plate
/* for the Pullman 1- by 2-degree
quadrangle in color (scale 1:250,000).
/* PLOT OF BEDROCK ONLY
/*****
/* To run this AML:
/* 1. Type '&run pull250k' at the 'Arc:'
prompt to start the program,
/* 2. Run the ArcInfo HPGL2 command to
convert the GRA file to an HPGL2
/* file, i.e., hpgl2 pull250k pull250k.hp
# 1.0 opaque # 0 # # # cal.dat
/* 3. Execute the UNIX 'lpr' command to
print the 1:250,000-scale geologic
/* map plot on your plotter, i.e., lpr -
Ppicasso pull250k.hp
/* 4. To make an Encapsulated PostScript
file, at the ArcPlot prompt type
/* 'display 1040 2' and enter 'pull250k'
for a pull250k.eps file.

## Appendix D - Metadata file (pull250k.met) for the Pullman GIS

### Identification\_Information:

#### Citation:

##### Citation\_Information:

Originator: Rember, W.C., Bennett, E.H., Kayser, H.Z.

Publication\_Date: 2001

##### Title:

Spatial digital database for the geologic map of the east part of the Pullman 1 x 2 -degree quadrangle, Idaho

Edition: version 1.0

Geospatial\_Data\_Presentation\_Form: map

##### Series\_Information:

Series\_Name: U.S. Geological Survey Open-File Report

Issue\_Identification: Open File Report 01-262

##### Publication\_Information:

Publication\_Place: Menlo Park, CA

Publisher: U.S. Geological Survey

##### Online\_Linkage:

URL = <http://geopubs.wr.usgs.gov/open-file/of01-262>

### Description:

#### Abstract:

The paper geologic map of the east part of the Pullman 1 x 2 -degree quadrangle, Idaho (Rember and Bennett, 1979) was scanned and initially attributed by Optronics Speciality Corp. Inc. (Northridge, CA) and remitted to the U.S. Geological Survey for further attribution and publication of the geospatial digital files. The resulting digital geologic map GIS can be queried in many ways to produce a variety of geological maps.

#### Purpose:

This dataset was developed to provide a geologic map GIS of the east part of the Pullman 1:250,000 quadrangle for use in future spatial analysis by a variety of users. These data can be printed in a variety of ways to display various geological features or used for digital analysis and modeling. This database is not meant to be used or displayed at any scale larger than 1:250,000 (e.g. 1:100,000 or 1:24,000).

#### Supplemental\_Information:

This GIS dataset consists of one major Arc/Info dataset: a line

and polygon file (pull250k) that contains geologic contacts and structures (lines) and geologic map rock units (polygons).

Use\_Constraints:

This digital database is not meant to be used or displayed at any scale larger than 1:250,000 (e.g., 1:100,000, 1:24,000).

Any hardcopies utilizing these data sets shall clearly indicate their source. If the user has modified the data in any way, they are obligated to describe the types of

modifications they have performed on the hardcopy map. User specifically agrees not to misrepresent these data sets, nor to imply that changes they made were approved by the U.S. Geological Survey.

Contact\_Electronic\_Mail\_Address: pderkey@usgs.gov

Data\_Set\_Credit:

Optronics Specialty Corp., Inc. scanned the Rember and Bennett (1979) geologic map and provided minimally attributed ArcInfo interchange-format files to the U.S.G.S.;

Helen Z. Kayser (contractor) attached and attributed an interim geologic map data model; and

Michael Zientek (USGS) and Pamela D. Derkey (USGS) visually compared the hard copy plots with the source documents.

Native\_Data\_Set\_Environment:

SunOS, 5.7, sun4u UNIX

ARC/INFO version 8.0

Data\_Quality\_Information:

Attribute\_Accuracy:

Attribute\_Accuracy\_Report:

Attribute accuracy was verified by manual comparison of the source with hard copy printouts and plots.

Logical\_Consistency\_Report:

Polygon and chain-node topology present. Polygons intersecting

the neatline area closed along the border. Segments making up the outer and inner boundaries of a polygon tie end to end to completely enclose the area. Line segments are a set of sequentially numbered coordinate pairs. No duplicate features exist nor do duplicate points in a data string. Intersecting lines are separated into individual line segments at the point of intersection. All nodes are represented by a single coordinate pair which indicates the beginning or end of a line segment.

**Completeness\_Report:**

This digital geologic map is wholly derived from Rember, and Bennett (1979).

Scratch boundaries were added by the author (Kayser, 2001).

**Positional\_Accuracy:**

**Horizontal\_Positional\_Accuracy:**

**Horizontal\_Positional\_Accuracy\_Report:** +/- 55 meters

**Source\_Citation\_Abbreviation:** Rember and Bennett, 1979

**Source\_Contribution:**

This map was the only map used to create the digital geologic map database.

**Process\_Step:**

**Process\_Description:**

The published paper geologic map was scanned by Optronics  
Speciality Corp., Inc.

Process\_Date: 2000

Process\_Step:

Process\_Description:

The digital files were attributed by Helen Z. Kayser (contractor)  
at the USGS Spokane Field Office using an iterim geologic map  
data model. The data were checked for position by comparing  
plots of the digital data to the source.

Entity\_and\_Attribute\_Information:

Overview\_Description:

**Entity\_and\_Attribute\_Overview:**

The 'Digital geologic map of the east part of the Pullman 1 x 2-degree quadrangle, Idaho ...' contains a detailed description of each attribute code. The database includes a geologic linework arc attribute table, pull250k.aat, that relates to the pull250k.con (contact look-up table), pull250k.st2 (structure look-up table), and pull250k.ref (source reference look-up table) files; a rock unit polygon attribute table, pull250k.pat, that relates to the pull250k.ru (rock unit look-up table) and pull250k.ref (source reference look-up table) files.

**Entity\_and\_Attribute\_Detail\_Citation:**

A detailed description of the items in the east part of the Pullman 250K database are given in the report text provided, available in Adobe Acrobat PDF format on the World Wide Web at: <http://geopubs.wr.usgs.gov/open-file/of01-262/>

**Distribution\_Information:****Distributor:****Contact\_Information:****Contact\_Organization\_Primary:**

**Contact\_Organization:** U.S. Geological Survey

**Contact\_Instructions:**

This report is only available in the electronic format at URL = <http://geopubs.wr.usgs.gov/open-file/of01-262/> or via anonymous FTP from [geopubs.wr.usgs.gov](http://geopubs.wr.usgs.gov), in the directory [pub/open-file/of01-262](http://geopubs.wr.usgs.gov/pub/open-file/of01-262).

**Distribution\_Liability:**

The U.S. Geological Survey (USGS) provides these geographic data "as is". The USGS makes no guarantee or warranty concerning the accuracy of information contained in the geographic data. The USGS further make no warranties, either expressed or implied as to any other matter whatsoever, including, without limitation, the condition of the product, or its fitness for any particular purpose. The burden for determined fitness for use lies entirely with the user. Although these data have been processed successfully on computers at the USGS, no warranty, expressed or implied, is made by the USGS regarding the use of these data on any other system, nor does the fact of distribution constitute or imply any such warranty.

In no event shall the USGS have any liability whatsoever for payment of any consequential, incidental, indirect, special,

or tort damages of any kind, including, but not limited to, any loss of profits arising out of the delivery, installation, operation, or support by the USGS.

This digital geologic map database of the east part of the Pullman 1 x 2-degree quadrangle is not meant to be used or displayed at any scale larger than 1:250,000 (e.g., 1:100,000 or 1:24,000).
