Dear Administrator Johnson

Please make this Guidance protect all of our nation's waters, not just some of them.

Protection of water bodies should be done by type of water and its geography, and should not force a more narrow case by case consideration which will result in lots of important small streams and wetlands losing protections.

Our policies should take into account all the benefits of this kind of protection and all the threats to water quality and quantity.

Weakening the intent of the Clean Water Act puts my family's drinking water at risk. It endangers our lakes, rivers and streams for use in outdoor recreation and for the sustainability of the ecosystem as a whole. I urge you to take this seriously.
