## Table G10.A2. Comparison of Injury Rates Attributed to Walking and to Running/Jogging by Total Amount of Activity

Injury definition: Self-diagnosed and reported activity-related injury to muscle, tendon, bone, ligament, or joint (Colbert, 2000)(1)

| Reported Level of Activity | Walking <br> Estimated MET- min/wk | Walking Percent Injured | Walking <br> Percent Injured per 100 MET- min/wk | Jogging/Running Estimated MET- min/wk | Jogging/Running <br> Percent Injured | Jogging/Running Percent Injured per 100 MET- min/wk |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| <15 min/day | 2701 | $18 \%{ }^{2}$ | 6.7 | 7001 | $21 \%^{2}$ | 3.0 |
| 15-30 min/day | 6001 | 19\% ${ }^{2}$ | 3.2 | 1,5701 | 29\% ${ }^{2}$ | 1.8 |
| >30 min/day | 9301 | $16 \%{ }^{2}$ | 1.7 | 2,450 ${ }^{1}$ | $32 \%{ }^{2}$ | 1.3 |

Injury definition: Self-diagnosed and reported activity-related injury of any severity (Suter, 1994)(2)

| Average Achieved <br> Dose of Walking or <br> Jogging | Walking <br> Estimated MET- min/wk | Walking <br> Percent Injured | Walking <br> Percent Injured per <br> 100 MET- min/wk | Jogging/Running <br> Estimated MET- min/wk | Jogging/Running <br> Percent Injured | Jogging/Running <br> Percent Injured per <br> 100 MET- min/wk |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Walk $120 \mathrm{~min} / \mathrm{wk}$ | $600^{3}$ | $54 \%$ | 9.0 | - | - |  |
| Jog $90 \mathrm{~min} / \mathrm{wk}$ | - | - | - | $900^{3}$ | $75 \%$ |  |

Injury definition: Self-diagnosed and reported activity-related injury interrupting activity for $\geq 7$ days (Suter, 1994)(2)

| Average Achieved <br> Dose of Walking or <br> Jogging | Walking <br> Estimated MET- min/wk | Walking <br> Percent Injured | Walking <br> Percent Injured per <br> 100 MET- min/wk | Jogging/Running <br> Estimated MET- min/wk | Jogging/Running <br> Percent Injured | Jogging/Running <br> Percent Injured per <br> 100 MET- min/wk |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Walk $120 \mathrm{~min} / \mathrm{wk}$ | $600^{13}$ | $21 \%$ | 3.5 | - | - |  |
| Jog $90 \mathrm{~min} / \mathrm{wk}$ | - | - | - | $900^{3}$ | - |  |

${ }^{1}$ Estimated metabolic equivalent (MET)-minutes/wk in Colbert study (1) assumes walking pace is $17 \mathrm{~min} / \mathrm{mile}$ ( 3.8 METs ) and running/jogging pace is 10 minutes/mile ( 10 METs ).
${ }^{2}$ Percent injured in Colbert study (1) is calculated from data provided in the article.
${ }^{3}$ Suter study (2) assumes walking pace is $4 \mathrm{mph}(5 \mathrm{METs}$ ) and running/jogging pace is 10 minutes/mile ( 10 METs ).
