Record of Proceedings of

SEC ADVISORY COMMITTEE ON  
IMPROVEMENTS TO FINANCIAL REPORTING  
OPEN MEETING

Thursday, March 13, 2008

2:59 p.m. to 6:48 p.m.

Laurel Heights Conference Center  
Sublevel 1 Auditorium  
University of California - San Francisco  
San Francisco, CA

## 1 COMMITTEE MEMBERS PRESENT:

2 Robert C. Pozen, Committee Chairman

3 Susan Schmidt Bies

4 J. Michael Cook

5 Jeffrey J. Diermeier

6 Scott C. Evans

7 Linda L. Griggs

8 Gregory J. Jonas

9 William H. Mann, III

10 G. Edward McClammy

11 Edward E. Nusbaum

12 David H. Sidwell

13 Thomas Weatherford

14

## 15 COMMITTEE MEMBERS ABSENT:

16 Dennis R. Beresford

17 Joseph A. Grundfest

18 Christopher Liddell

19 James H. Quigley

20 Peter J. Wallison

21

## 22 OFFICIAL OBSERVERS PRESENT:

23 Dan Goelzer for Mark Olson

1 P R O C E E D I N G S

2 MR. KROEKER: I'll go ahead and call the meeting to  
3 order. I want to thank -- I particularly want to thank the  
4 panelists for agreeing to come and join us. I certainly look  
5 forward to the discussion. I also want to thank a couple of  
6 staff people in particular, but -- the entire staff -- but  
7 there were a couple people in particular that put a  
8 tremendous amount of effort into making sure that we could  
9 bring the CIFiR show on the road. Brett Williams spent a lot  
10 of time researching locations and put a tremendous effort  
11 into this, as well as Dana Swain and certainly a number of  
12 other staff. And if I begin to mention them all, I'll forget  
13 somebody.

14 With that, I do also want to highlight that the  
15 statements of many of the panelists -- or that the panelists  
16 have provided -- are available. They are available as  
17 handouts here. There are a number of attachments to John  
18 Huber's statement that aren't in the package but that are  
19 available online. For anyone that is listening online, the  
20 statements are available in the "Comments" section of the  
21 CIFiR web site.

22 And with that, I'll turn it over to you, Bob.

23 INTRODUCTORY REMARKS

24 MR. POZEN: Thank you very much. And I also want  
25 to thank the staff from the SEC and the PCAOB and the FASB

1 for doing such an excellent job.

2 And I guess I would like to make sure that  
3 everybody begins by knowing everybody else, so maybe we could  
4 just quickly go around the room and the committee members  
5 could introduce themselves and just their affiliations.

6 Scott?

7 MR. EVANS: Scott Evans, TIAA-CREF. I'm on the  
8 standard-setting subcommittee.

9 MR. SIDWELL: David Sidwell, same subcommittee as  
10 Scott. I'm the CFO of Morgan Stanley.

11 MR. POZEN: I don't think we'll need to do the  
12 subcommittee, since we're meeting as a whole committee to  
13 educate.

14 Ed.

15 MR. NUSBAUM: Ed Nusbaum, Grant Thornton.

16 MS. GRIGGS: Linda Griggs, Morgan Lewis & Bockius.

17 MR. JONAS: Greg Jonas from Moody's Corporation.

18 MR. COOK: Michael Cook. I'm unemployed.

19 MR. POZEN: Mike is here as a member of several  
20 audit committees, probably the head of several audit  
21 committees.

22 MR. DIERMIER: Jeff Diermier, CFA Institute.

23 MR. MANN: Bill Mann, with the Motley Fool.

24 MR. WEATHERFORD: Tom Weatherford, independent  
25 board member.

1 MR. MCCLAMMY: Ed McClammy, CFO, Varian, Inc.

2 MS. BIES: Sue Bies, representing, as a former bank  
3 regulator, the bank regulators.

4 MR. POZEN: I know Joe Grundfest said he was under  
5 the weather today, so he may or may not show up; and he sends  
6 his regrets if he can't.

7 I'd also like just sort of -- maybe we can just go  
8 in alphabetical order and we'll sort of ask for testimony in  
9 reverse order.

10 So, Jack, you want to begin?

11 MR. ACOSTA: Jack Acosta; and my background is  
12 primarily finance, CFO of multiple companies. Now I  
13 primarily sit on boards as chair of audit committee.

14 MR. BOCHNER: I'm Steve Bochner, a partner with  
15 Wilson Sonsini Goodrich & Rosati.

16 MR. GOYAL: I'm Manish Goyal, research analyst with  
17 TIAA-CREF.

18 MR. POZEN: Better be careful. Your boss is here.

19 MR. HUBER: John Huber, partner, Latham & Watkins.

20 MR. MEISEL: Steve Meisel, partner,  
21 PricewaterhouseCoopers.

22 MS. MOONEY: Elizabeth Mooney, Capital Group  
23 Companies.

24 MS. ROPER: Barbara Roper, Consumer Federation of  
25 America.

1           MR. POZEN: Yes. And I want to thank all the  
2 witnesses for taking the time to come out here. Some of you,  
3 I know, have traveled quite a distance; and others it's a  
4 little closer. But we are trying to have not just a  
5 Washington-based set of public meetings; but we will have one  
6 in Chicago, I think in May, so we're trying to make sure  
7 that -- and in New York probably in July -- so we want to  
8 make sure that people from various parts of the country have  
9 a chance to make known their views.

10           We also have comment letters; and we have  
11 circulated a summary of the comment letters to the committee  
12 so I'm not going to go over them now, but just to note for  
13 the record that these are available in the public file for  
14 anyone who wants to see them.

15           Now, our procedure for today is pretty simple.  
16 We're going to have two panels, each of which will last, say,  
17 an hour and a half, maybe an hour and forty minutes. We'll  
18 take a break between them. This is the first panel. And  
19 we've asked each of the members of the panel to make a short  
20 statement -- and we're going to be pretty tough about  
21 that -- at five minutes. Some people have submitted a  
22 statement in writing. So we have those; and you should  
23 assume that we have read those and not necessary to read them  
24 again. But, obviously, if you want to make some comments on  
25 them.

1           And then what we're hoping for is, after people  
2 make their statements, is to have some real discussion based  
3 on these issues so that we can be better informed. Our  
4 objective in putting out what we call the "interim  
5 report" - "interim progress report" -- was to get our views out  
6 so that people could have a chance to comment. We will be  
7 putting out a final report at the beginning of August  
8 so this is in the nature of a draft. We very much welcome  
9 input, both by comment letters and through these public  
10 forums that we're going to have, so that we can become  
11 educated, that we can understand better how people reacted to  
12 this.

13           It may be the case that we haven't fully understood  
14 certain points of view. It may be the case that we have not  
15 communicated clearly enough our point of view; and so this  
16 is a good way in which we can learn, hopefully,  
17 about how to reach better conclusions than we did or to  
18 improve them.

19           As you know, we have twelve what we call developed  
20 proposals; and we tried to put them out in some detail; and  
21 then we have other issues that we're going to consider, going  
22 forward. This meeting is to focus on the developed proposals  
23 and especially the set that relates to what's sometimes  
24 called subcommittee 3.

25           So I think what we're going to do here is just go

1 in reverse alphabetical order and just go through.

2 And, Barbara, would you start us off?

3 PANEL ONE - RESTATEMENTS AND  
4 DISCUSSIONS OF DEVELOPED PROPOSALS

5 MS. ROPER: As director of investor protection for  
6 the Consumer Federation of America, my job is to advocate on  
7 behalf of typical retail investors. Now, the typical retail  
8 investor may never look at a financial statement, yet they  
9 have a strong interest in ensuring that financial reporting  
10 is reliable and that errors, when they occur, are corrected  
11 quickly, because their ability to retire in comfort  
12 increasingly depends on the health of the capital markets.  
13 And the health of the capital markets depends on reliable  
14 financial reporting.

15 Despite the reforms that have been adopted since  
16 Enron, investors remain very concerned about the accuracy of  
17 financial reports. According to an AARP survey released last  
18 year, 79 percent of investors think financial and accounting  
19 standards should be strengthened; 3 percent think they should  
20 be loosened. That's why we strongly oppose the  
21 recommendations that we believe would weaken the materiality  
22 standard and provide less transparency around the reporting  
23 of financial statement errors.

24 The committee has argued that these changes are  
25 needed to reduce the number of unnecessary restatements; but

1 the report, at least, provides no evidence that a significant  
2 number of unnecessary restatements are currently occurring.  
3 We believe the assumption that the fact that a restatement  
4 has no significant market impact is a poor basis on which to  
5 determine that it's not significant to investors.

6           Moreover, the committee has not -- or the report  
7 has not -- provided any evidence that the benefits of  
8 reducing these restatements -- they are indeed  
9 unnecessary -- outweighs the risks that errors will go  
10 on -- that material errors will go uncorrected if the  
11 proposed changes are adopted, which we believe would be the  
12 case. The report argues that the current approach is too  
13 conservative; and it suggests that new guidance is needed on  
14 the materiality and emphasizes the concept that the  
15 evaluations of materiality should be based on a reasonable  
16 investor, how an error affects the total mix of information  
17 available to that investor using a sliding scale that  
18 includes both quantitative and qualitative factors.

19           I admit I'm confused. I just reread SAB 99. All of  
20 those principles are in there, clearly articulated. It says,  
21 for example, that a matter is material if there is a  
22 substantial likelihood that a reasonable person would consider  
23 it important. It makes it absolutely clear that both  
24 quantitative and qualitative factors have to be taken into  
25 account in making these assessments. It talks about the

1 total mix of information.

2           So why do we need new guidance? The report  
3 suggests that new guidance is needed because the committee  
4 believes too many materiality judgments are being made in  
5 practice without full consideration of how a reasonable  
6 investor would evaluate the error. But if that's happening,  
7 it does not appear to me to be happening because there is a  
8 flaw in the existing guidance. It, frankly, sounds to me the  
9 committee is second-guessing the judgments made about  
10 materiality by auditors and issuers today.

11           One issue is clearly the desire of the committee to  
12 make it easier to have quantitatively large errors excused as  
13 immaterial, based on qualitative factors, something SAB 99  
14 does allow, albeit in limited circumstances. Past experience  
15 tells us that encouraging a move in this direction is just a  
16 bad idea. Think Enron in 1997, when Arthur Andersen  
17 acquiesced to Enron's argument that adjustments that would  
18 have reduced its net income by nearly 50 percent were  
19 immaterial. You know, think about Waste Management; or just  
20 read more recent headlines, for example, where auditors have  
21 rubber-stamped highly questionable arguments that large  
22 errors are immaterial. So large errors may not be by  
23 definition material; but if this approach is encouraged, it  
24 will be abused, in our opinion. For that reason, we believe  
25 the presumption should always be that a qualitatively large

1 error is material.

2           But if you insist on doing something in this area,  
3 we could consider a proposal to allow quantitatively large  
4 errors to go uncorrected in certain circumstances, if  
5 managers and auditors were required to disclose that the  
6 report includes uncorrected errors, the amount and nature of  
7 those errors, and the basis of the decision that they are not  
8 material.

9           The report also suggests that we need new guidance  
10 on when and how to correct an error; and it makes a number of  
11 suggestions that we believe would allow more errors that are,  
12 in fact, significant to investors to avoid restatement.  
13 These include allowing past errors to go uncorrected on the  
14 highly questionable assumption that they're irrelevant to  
15 current investors.

16           And as I read this, I was curious. Who are these  
17 current investors? Do they include potential investors who  
18 may be evaluating a company stock to determine whether they  
19 want to purchase it? If so, on what basis could one assume  
20 that they have no interest in following historical trends,  
21 something that proposals that would not require past errors  
22 to be corrected would make significantly more difficult?  
23 And if the term "current investors" does not include  
24 potential investors, why on earth not? For that matter, on  
25 what basis do you decide that current investors don't have a

1 similar interest in following trends or that interim reports  
2 aren't relevant to these investors?

3           And the point that really sort of bewilders me is  
4 that, having identified incomparability and inconsistency as  
5 the leading causes of avoidable complexity, on what basis  
6 have you determined that reducing comparability and  
7 consistency in this area improves financial reporting? We  
8 simply don't agree.

9           We are concerned that the committee invites a  
10 return to self-restatement when it suggests that errors that  
11 are found close to the next reporting period may not need to  
12 be corrected until the next report. I suspect that a lot of  
13 errors will magically be discovered close to the next  
14 reporting period if this approach is encouraged. I suspect  
15 investors won't appreciate having those kinds of  
16 accounting games.

17           In an ideal world, our policies would strike a  
18 perfect balance. They would ensure that all material errors  
19 are corrected and that no unnecessary restatements occur. As  
20 you may have noticed, however, this is not an ideal world.  
21 Too many issuers have shown themselves willing to game the  
22 system and too many auditors have shown themselves willing to  
23 let them. Given that reality, in our opinion it is far better  
24 for investors to err on the side of conservatism and risk  
25 causing a few unnecessary restatements than it is to focus so

1 hard on reducing unnecessary restatements that we allow  
2 material errors to go uncorrected. Because of what we  
3 believe is a fundamentally flawed focus on reducing  
4 restatements instead of reducing errors, we fear that these  
5 recommendations, if adopted, will reduce transparency; will  
6 increase investor confusion; will undermine investor  
7 confidence; and will, in fact, invite a return to the kind of  
8 shoddy practices of the all-too-recent past. But that, of  
9 course, is just my professional judgment.

10 MR. POZEN: Do you want to say -- okay. Then  
11 we're -- okay. Thank you very much.

12 Elizabeth.

13 MS. MOONEY: Thank you, Chairman Pozen and other  
14 members. Thank you very much for the opportunity to be here  
15 today to testify on the topics of materiality and  
16 restatements. They are two very important topics to  
17 investors.

18 I'm an analyst with the Capital Group Companies,  
19 which manages, through affiliates, American Funds, as well as  
20 institutional, endowment, and private-client accounts.  
21 Capital Research and Management and Capital Guardian Trust  
22 Company buy and hold equities and fixed-income investments  
23 and securities for the long term. We actively manage well  
24 over a trillion of assets and have over 350 analysts and  
25 portfolio managers globally throughout the organization. We

1 conduct intense on-the-ground company research and are  
2 current and reasonable investors who are very heavy users of  
3 and rely on financial statements. These are my own views and  
4 I surveyed my investment colleagues with several questions;  
5 and I wanted to discuss the results of the survey with you.

6           First, we oppose a company's and its auditors'  
7 decision not to correct financial statements for a large,  
8 quantitatively significant error. Correcting such an error is  
9 relevant; and the restated information would likely have an  
10 effect on our evaluation of the company's securities, going  
11 forward. We emphatically oppose having anyone other than  
12 investors themselves determine whether quantitatively  
13 significant errors provide relevant information to investors.  
14 This was a 75-percent response to this. That is, whether such  
15 errors are capable of making a difference in user decisions.  
16 Quantitatively large errors should not be deemed immaterial  
17 by the company and auditors.

18           Second, we believe a company should restate  
19 previously reported amounts for individual income and expense  
20 items on the income statement, even though the previously  
21 reported net income number would not change as a result. We  
22 are very interested in the corrected individual components of  
23 the income statement and use the changes in specific income  
24 and expense items over time as part of our trend analysis.  
25 This detailed information is critical for projecting a

1 company's future results, future earnings and cash flows and,  
2 in turn, the evaluation of debt or equity securities. As  
3 such, net income is merely a starting point for analyzing a  
4 company's historic performance and should not be viewed as  
5 the only important amount on the income statement for  
6 assessing materiality of possible restatements.

7 Third, we believe that even if a material error does  
8 not affect the annual financial statements in a company's  
9 most recent 10-K filing, historical results should be  
10 restated. One analyst asked if this was a joke. Corrections  
11 should not limited to results presented in the current report  
12 being filed. Even such errors that do not affect the annual  
13 financial statements included in the company's most recent  
14 filing with the SEC are relevant to current investors.

15 Fourth, we believe that both interim and annual  
16 results need to be restated if affected by material error.  
17 The same results and principles should apply for both, as we  
18 rely on both sets of results. Again, trend analysis or  
19 understanding the variance in reported amounts over time is  
20 very important. Making an adjustment for a large  
21 quantitative error in the following period or annual  
22 statement to avoid correcting the actual prior period or  
23 periods -- interim statements -- affected will result in  
24 distorting the interim current and prior reporting periods.  
25 This has a negative report on the usefulness of trend

1 analysis.

2 Fifth, we agree with the part of CIFIr's Developed  
3 Proposal 3.2 that suggests current disclosure is not  
4 consistently adequate for the needs of investors. Yes, we do  
5 get confused when a company provides little or no disclosure  
6 once it has announced a reporting issue and/or a possible  
7 restatement until it issues its revised financial report.  
8 Disclosure is a concern and investors want to be their own  
9 decision-makers on which errors -- material under SAB  
10 99 -- are unimportant in their investment theses.  
11 Moreover -- 94 percent said this --  
12 companies should disclose their bases for materiality, how  
13 they assess materiality, and the amount of uncorrected errors  
14 as of each reporting period. I'm aware that this committee  
15 has proposed a professional judgment framework, given that  
16 professional judgment is integral to materiality and used  
17 when assessing materiality. I just want to say that  
18 investors are very interested in having disclosure of the key  
19 risk areas in the financial statements from the perspectives  
20 of each manager and the auditors.

21 And I also -- on professional judgment, before I  
22 continue on materiality, I just want to read an excerpt from  
23 our testimony from February 4th to the Treasury Advisory  
24 Committee on the Auditing Profession. This was delivered by  
25 Paul Haaga, vice-chairman of Capital Research Management

1 Company, just that we do not believe that providing audit  
2 firms a safe harbor or business judgment rule is necessary at  
3 this time. Investors place reliance on auditors as experts  
4 who spend a significant amount of time examining the  
5 companies they audit. The judgments made by the auditors  
6 should be informed by their expertise and time spent on the  
7 audit engagements. Recent history has shown that these  
8 judgments have been poor in so many instances that we believe  
9 it's unwarranted to provide a safe harbor for judgments  
10 related to historical numbers and to take away the deterrent  
11 of litigation.

12 Overall, the analysts and portfolio managers that I  
13 surveyed place a very high level of importance on having  
14 comparable, consistent, and accurate historical financial  
15 statements for analyzing a company, conducting trend  
16 analysis, and forecasting future results. Using a scale of  
17 one equals not important and five equals very important,  
18 nearly all respondents believe that having such information  
19 is very important and the remaining view it as important.

20 If the market is getting it wrong by punishing a  
21 stock in reaction to a company's restatement, then the  
22 company should disclose more information. The lack of  
23 transparency is what creates unwarranted confusion and  
24 unnecessarily penalizes valuations. If high-quality  
25 information is provided, reasonable investors can quickly

1 digest it and move forward. If restatement information is  
2 misinterpreted initially, clarity helps the stocks rebound  
3 sooner. We see it time and time again.

4           Fortunately, the Sarbanes-Oxley cleanup is mostly  
5 behind us for accelerated filers; and the number of  
6 restatements is on the decline.

7           In conclusion, current guidance provided by the  
8 courts and SEC for assessing materiality as appropriate, in  
9 my opinion -- our opinion. On behalf of investors -- and as  
10 one reasonable investor put it to me -- please don't change a  
11 word of SAB 99.

12           Thank you.

13           MR. POZEN: Thank you, Elizabeth.

14           Stephen. Mr. Meisel.

15           MR. MEISEL: Chairman Pozen and members of the  
16 committee, SEC staff, and observers, good afternoon. Thank  
17 you for inviting me here today to respond to your questions  
18 on behalf of the Center for Audit Quality relating to the  
19 developed proposals for materiality assessments and the  
20 process for reporting errors.

21           Although the number of restatements declined in  
22 2007, the number of restatements has grown substantially over  
23 the last several years. The committee's progress report  
24 describes a number of contributing factors to this growth,  
25 including an observation that it may be the result of an

1 overly broad application of existing materiality guidance.

2           The terms "unnecessary" and "necessary" have been  
3 used when describing restatements, creating the perception  
4 that some restatements are being processed for immaterial  
5 items -- items that are not important to a reasonable  
6 investor. This leads us to question whether the areas that  
7 were determined to be material were, in fact, not material;  
8 and whether the disclosures of the error correction were  
9 useful to investors. To provide better information to the  
10 market, additional guidance on materiality judgments and,  
11 separately, the process for and disclosure of correction of  
12 errors should be enhanced.

13           The three key themes to materiality and error  
14 correction guidance are: First, all errors need to be  
15 corrected, yet not all need to result in a restatement;  
16 Second, the materiality of an error should be evaluated from  
17 the perspective of a reasonable investor and should consider  
18 all surrounding facts and circumstances; and Third,  
19 transparent disclosures are essential to communicating  
20 material errors to investors.

21           The committee's recommended enhancements to  
22 existing SEC material guidance should not be viewed as  
23 facilitating the obfuscation of material errors or permitting  
24 material errors to remain uncorrected under the guise of  
25 qualitative judgments. In fact, all errors need to be

1 corrected so that a company's underlying financial records  
2 are complete. It is determining what constitutes a material  
3 error and how the error should be corrected and disclosed  
4 that wants enhancement.

5           It is important to align materiality adjustments  
6 with investor needs. The materiality of any one piece of  
7 information should be judged based on the total mix of  
8 information. For example, an interim period is part of a  
9 larger mix of information available to a reasonable investor.  
10 That is not to suggest that interim financial statements are  
11 unimportant; rather, it's an acknowledgment that certain  
12 factors are evaluated differently in the materiality analysis  
13 related to financial statements. As such, there may be  
14 instances when an amount that might appear to be large would  
15 be unimportant to a reasonable investor when viewed within  
16 the context of all surrounding facts and circumstances.  
17 Likewise, there may be instances when an amount that might  
18 appear to be small would be important to a reasonable  
19 investor, given the surrounding facts and circumstances.

20           Transparent disclosure should be provided to inform  
21 investors that a material error occurred, the impact of error  
22 on the period in which it originated, and the period in which  
23 it is corrected, and any implications the error has on the  
24 company's business. These disclosures should provide  
25 comparable financial data and insight regarding the

1 likelihood that such an error could occur in the future.

2           In summary, there are two separate and distinct  
3 steps: first, the determination of whether or not an error  
4 is important to an investor, given all the surrounding facts  
5 and circumstances; and second, the forms of disclosure for the  
6 correction of an error that is important to a reasonable  
7 investor, such as restating prior periods or correcting the  
8 current period. The committee's recommendations will enhance  
9 the usefulness of information provided to investors regarding  
10 the correction of errors in financial reporting.

11           Again, thank you for giving me the opportunity to  
12 share these perspectives with you. I would be pleased to  
13 respond to your questions and comments to assist the  
14 committee in this important matter.

15           MR. POZEN: Thank you very much.

16           MR. HUBER: This is John Huber. Thank you, Mr.  
17 Chairman.

18           I've been a securities lawyer for 33 years, both at  
19 the SEC and in private practice. I actually learned how to  
20 love accounting in the Division of Corporation Finance.  
21 Everyone laughs when I say that. But I do love accounting;  
22 and I find the trend with respect to restatements in the past  
23 five years very disturbing. When one out of five public  
24 companies has had a restatement in the last two years, that  
25 is a very disturbing trend. And as one of the people that

1 gave you MD&A in the early 1980s in terms of trends and known  
2 uncertainties, I can tell you that if I was writing your  
3 MD&A, that would be a very large trend and a known  
4 uncertainty; because if everybody has one, the marketplace  
5 will soon draw its own distinctions as to what is important  
6 and alternatively decide how to differentiate between  
7 restatements that can affect the market and enterprise value  
8 of a company and those that do not. Thus, not all  
9 restatements are created equal. The market views some  
10 restatements as a selling event when investors stampede out  
11 of the stock; yet other restatements are viewed as a buying  
12 opportunity by market professionals resulting in the stock  
13 prices not going down or going up.

14           The time needed to resolve restatement situations  
15 can result in market professionals, such as hedge funds, or  
16 shareholder activists buying the debt of a company that is in  
17 default under its debt covenants for the failure to file  
18 timely periodic reports; or buying the common stock of the  
19 company that has an "accounting problem" and  
20 put it in play. The result in both situations can be a  
21 determination by the company's board of directors, because of  
22 their fiduciary duties, to consider strategic alternatives,  
23 which can result in selling the company at a fire-sale price.  
24 For long-term shareholders, the short-term gains of others  
25 results in selling their investment on the cheap. For

1 employees, it means the loss of jobs when the company is  
2 sold.

3           The developed proposals present a way to resolve  
4 the dilemma which has existed about materiality and  
5 restatements. I support Developed Proposals 3.1, 3.2, and  
6 3.3. They are consistent with what I believe in, in terms of  
7 my practice both at the SEC and in private practice.  
8 Specifically, I do not view the proposals as changing  
9 materiality. Rather, I think they are directed at  
10 restatements. I think they are directed at the issues that  
11 this committee was charged to look at.

12           When I was a young attorney at the SEC, I was  
13 taught -- and this was in the 1970s, so this predates SAB 99  
14 by 24 years -- that the dollar that takes you from a profit  
15 to a loss is material. Now, nobody called that a qualitative  
16 factor, but the fact of the matter is people looked at that  
17 as being material. Similarly, the staff then -- and I would  
18 respectfully submit the staff today -- looks at a sliding  
19 scale with respect to the idea that something that is  
20 quantitatively large can be qualitatively immaterial. The  
21 classic example there is cash-flow restatements; and, as a  
22 person who has done a large number of cash-flow restatements,  
23 I can tell you that they were a large proportion of  
24 the 1,600 restatements in the year 2006. So those sorts of  
25 quantitatively large errors can be qualitatively immaterial.

1           SAB 108 was a response from the staff to companies  
2 using the Iron Curtain approach exclusively and ignoring the  
3 roll-over approach when they found errors. This allowed  
4 errors to build up on the balance sheet that became material  
5 over time but were not corrected. Although necessary at the  
6 time, perhaps the abuse the staff saw in the past has been  
7 resolved. If so, SAB 108 should be revised to differentiate  
8 how the roll-over and Iron Curtain methods are applied by  
9 making their use depend on whether the financial statements  
10 have been issued. Once a company issues financial  
11 statements, it should be required to restate only if there is  
12 an error that is material under the roll-over approach.  
13 Thus, the Iron Curtain method would be applied only prior to  
14 the issuance of a financial statement rather than after  
15 issuance.

16           Contrary to what some people might think,  
17 addressing restatements while maintaining and clarifying  
18 materiality will result in investor protection and promote  
19 the public interest. Rather than being confronted by a  
20 blizzard of restatements that are difficult to differentiate,  
21 investors will be able to distinguish between restatements  
22 that truly represent changes to the financial statements that  
23 a reasonable investor would consider in making an investment  
24 decision on the one hand and accounting errors that would not  
25 change the perspective, prospects, or business of their

1 companies on the other. Restatements are expensive in terms  
2 of time, effort, diversion of management resources, expense,  
3 litigation, capital formation. Accounting errors that are  
4 material will still require time, effort, and expense, as  
5 they do now; but they would not be as frequent; and  
6 accounting errors that are not material would be handled in a  
7 manner to avoid a restatement.

8           Critical to this is full disclosure. I'm a  
9 disclosure lawyer. I write disclosure every day. And the  
10 fact is all of the points that are made in these  
11 recommendations are predicated on full disclosure. This is  
12 not something where the numbers would be changed and there  
13 wouldn't be an explanation. I, as a securities lawyer, would  
14 insist that there be disclosure of how they were changed, why  
15 they were changed, and for what periods. It's the who, what,  
16 when, where, why, and how of disclosure.

17           So my only point here is that from a perspective of  
18 looking at this, these proposals are proposals that I  
19 support. And since the framework was mentioned, I would like  
20 to mention the idea that -- and we'll cover this in the next  
21 panel -- but I don't view the framework as a safe harbor. I  
22 view the framework as something -- as a necessary analogue to  
23 the implementation of 3.1, 3.2, and 3.3. And frameworks have  
24 been done successfully in the past.

25           MR. POZEN: Thank you.

1 Manish Goyal.

2 MR. GOYAL: Thank you. Thank you for inviting me  
3 before the advisory committee on improvements to financial  
4 reporting. It's an honor to be here.

5 I'm Manish Goyal. I'm a research analyst for  
6 TIAA-CREF. My comments and suggestions are limited to the  
7 development proposals 3.1, 3.2, and 3.3. In general, I  
8 support the proposals.

9 I believe that the balance should be maintained  
10 between the duty of accuracy of financial statements and  
11 timeliness, something very critical. As an equity analyst  
12 primarily covering technology, I care about the accuracy of  
13 financial statements in order to get a useful picture of the  
14 company's historic growth. Hence, large quantitative errors  
15 and material errors must be restated.

16 Secondly, the timeliness of financial statements on  
17 a going-forward basis is extremely crucial as these companies  
18 have short product cycles and face dynamic market  
19 environments. The companies in the process of restating  
20 actual statements prior to the last five years do a great  
21 deal of disservice to their existing stockholders and  
22 employees by reporting very limited financial data. The  
23 timeliness of quarterly financial statements is significantly  
24 compromised while companies and their auditors work on the  
25 accuracy of the historical statements. I find it extremely

1 difficult to gauge the current underlying business strengths  
2 during the dark period which could last anywhere from four to  
3 eight quarters.

4 I would like to see the following included in the  
5 developed proposals: Firstly, a company under the restatement  
6 process should be required to announce the scope of errors  
7 and estimate the range of impact on its revenue earnings and  
8 cash flow. Secondly, I believe that the proposal should  
9 require companies to disclose more detailed current quarterly  
10 financial data for more than just revenue and cash during the  
11 period of investigation that could help investors better  
12 understand the ongoing fundamentals. Finally, in the  
13 interest of timeliness, companies should be allowed greater  
14 flexibility in estimating amounts prior to the last five years,  
15 depending on the nature of the investigation and the  
16 magnitude of errors. Minor disagreements between accountants  
17 and independent auditors on estimates must not delay the  
18 release of financial statements. I would prefer to have  
19 financials released with additional disclosures on areas of  
20 agreement amongst the accountants and their auditors than to  
21 be left in the dark with zero information to base my  
22 decisions on. Investors should be allowed to make their own  
23 judgments as to the relevancy of minor disagreements on  
24 estimates of the auditors. In short, I would like to bring  
25 in the timeliness variable in this discussion.

1 Thank you.

2 MR. POZEN: Thank you very much.

3 Steven Bochner.

4 MR. BOCHNER: Thank you very much for having me  
5 here today. And I apologize to everybody from the SEC in the  
6 audience that I've got my back to you. But at least I can't  
7 see their expressions while I'm giving my remarks. And maybe  
8 that's a good thing.

9 As I indicated in my prepared statement, I served  
10 on the SEC advisory committee on smaller public companies;  
11 and you may know that one of our 33 recommendations that we  
12 delivered to the SEC was actually in this area dealing with  
13 materiality and restatements. And I'm really pleased to see  
14 that you're moving the ball forward on this important topic.  
15 Our advisory committee received a lot of data and heard  
16 testimony regarding the significant increase in restatements  
17 and we were aware of and focused on the subjective nature of  
18 materiality judgment calls and the hindsight nature with  
19 which these decisions were made. We came up with a couple of  
20 suggestions, or suggested areas of inquiry, that are  
21 indicated in my statement and in the final report we  
22 delivered in April '06. But these examples suggest a  
23 conceptual approach that's very consistent with the proposals  
24 outlined in your progress report and one that I'd like to  
25 strongly support as well today.

1           Like you, I believe that we should separate  
2 materiality assessments for disclosure purposes from a  
3 restatement determination. And in listening to my prior  
4 co-panelists here, I haven't heard anybody take the view that  
5 we shouldn't disclose material errors. I think everybody is  
6 in agreement about that. I think really what we have to  
7 focus on is whether a restatement the right way to correct  
8 those errors. That's a completely different inquiry; and I  
9 sense some confusion when I hear people talk about this area,  
10 because people all of a sudden focus on stealth restatements.  
11 Gee, you're not talking about disclosure. And I think you've  
12 come at it in a very appropriate way of separating those two  
13 things and looking at those two things separately.

14           I've got an example in my statement that I'll  
15 repeat here, which was assume an issuer discovers that an  
16 error was material seven quarters ago -- disclosure and  
17 correction of that error serves our markets very well. A  
18 restatement might not -- the time, expense, disruption,  
19 management time, and so on -- might not serve our markets well;  
20 and so there might be a different mode of correction. I  
21 think that thinking is very consistent with your proposals.

22           I'd like to further illustrate the problem with  
23 restatement determinations in the context of the  
24 reasonable-investor test that's set forth in SAB 99. In the  
25 reasonable-investor test -- we lawyers love the

1 reasonable-investor test. We labored long and hard and lost  
2 a whole bunch of cases on this topic. It has a storied  
3 history in federal case law; and it works really well in the  
4 context of disclosure decisions. Because it's subjective and  
5 because materiality might be judged with hindsight and  
6 materiality is often assessed with hindsight based on whether  
7 the stock actually moved way back when you made the judgment  
8 call, decisions like closing the trading window and whether  
9 to disclose are made very conservatively by well-counseled  
10 companies. When in doubt, disclose is good policy. When in  
11 doubt, restate may not be good policy.

12           Because the same standard is applied in both  
13 situations, I think it's not surprising that both of our  
14 bodies have suggested this approach, which is to separate the  
15 disclosure requirement from the mode of correction. One  
16 could imagine an extension of our current 8-K rules that  
17 would require the filing of an 8-K short of a restatement any  
18 time a material error is corrected perhaps or maybe any time  
19 any sort of correction is made. So there you have full  
20 disclosure. An 8-K would be filed. It would be prominent.  
21 There'd be no stealth restatements. And I encourage you to  
22 continue down that path; and I think that general approach is  
23 correct.

24           While on the topic of SAB 99, I do think SAB 99  
25 should be interpreted to cut both ways. I know from

1 experience that there's a lot of confusion, both among  
2 private practitioners and I think even at the staff level, so  
3 you're clarifying that one way or another would be quite  
4 helpful.

5 I believe the going-dark phenomena caused by our  
6 inability -- company's inability -- to file periodic reports  
7 often due to a restatement does not serve our markets well  
8 either. I agree with your observations that issuers should  
9 be allowed and encouraged to provide information to the  
10 market, even if it involves a partial filing. I think some  
11 information is better than no information; and the liability  
12 issues could be addressed by looking at the current safe  
13 harbor -- perhaps a modified safe harbor - for forward-looking  
14 information. Your committee was asked by the SEC to find  
15 ways to increase the usefulness of financial statements while  
16 reducing complexity. And I think this area of restatement  
17 determinations is unnecessarily complex and uncertain; and I  
18 believe you're on the right track.

19 Thank you.

20 MR. POZEN: Thank you, Steven.

21 MR. ACOSTA: I guess going last has its benefits,  
22 but not least. That's for sure. I'll try hard not to repeat  
23 what has already been said by many of the panelists today.

24 I certainly would like to start out by thanking the  
25 committee for allowing me to participate on this panel. The

1 topics being addressed -- materiality and  
2 restatements -- have been in need of better guidance and  
3 clarification for sometime, so I thank you for your efforts  
4 in researching the issues, gathering the relevant  
5 information, and developing proposals to address improving  
6 our collective interpretation of how we might determine what is  
7 viewed as material and its impact on whether or not a  
8 restatement is necessary, either for an interim period or  
9 the annual financial statement.

10           So let me just say that I'm supportive of the  
11 proposals 3.1, 3.2, and 3.3. And while I believe the  
12 proposals as stated can have a positive impact if interpreted  
13 from a reasonable investor perspective, there is a  
14 significant requirement or need to develop consistent  
15 methodology for ways of determining what is important to that  
16 current reasonable investor. I do believe that the concept  
17 of using a sliding scale to evaluate qualitative as well as  
18 quantitative information in making a determination if an  
19 error is material and therefore requiring restatement, is the  
20 appropriate direction for companies to follow. I do believe  
21 there is significant judgments applied today in many  
22 instances, but there is a lack of consistency across auditing  
23 firms and companies in determining what requires a  
24 restatement.

25           Just an example is the stock options backdating

1 issues that impact many companies and investors. Some  
2 companies went back ten years, which does not appear to meet  
3 the materiality standards that have been applied to other  
4 types of errors. But because the stock options backdating  
5 was highly visible, a different standard may have been  
6 applied than in other cases.

7 Another important issue that hopefully these  
8 proposals will help clarify is a tendency to apply a current  
9 thinking on technical topics to prior years. I have  
10 encountered situations where auditors were using then current  
11 guidelines -- in this case, 2006 -- including nonpublic views  
12 from the SEC technical experts and applying them to look at  
13 decisions that were made in 2001 and 2003, before the guidance  
14 was issued. Therefore, I am encouraged that these proposals  
15 when taking the current reasonable-investor perspective can  
16 help clarify what actions to take, especially related to  
17 restatements in previous periods for errors which were not at  
18 the time viewed as material.

19 I would also comment that the suggestions and  
20 proposals surrounding disclosure requirements on the nature  
21 of errors, impact of errors, and management response are  
22 thoughtful and reasonable and consistent with what we are doing  
23 in 404 today. So while the nature of these proposals are  
24 positive and constructive and I support them in providing a  
25 more consistent way to determine materiality and approaches

1 to restatement, if necessary the most significant concerns  
2 that I have is the retraining that is required to have the  
3 different decision-making bodies -- the financial statement  
4 preparers, SEC, FASB, PCAOB, and auditors -- being able to  
5 interpret facts and circumstances similarly and understand  
6 how a reasonable investor would react to any specific error,  
7 given the litigious nature of society and particularly in  
8 business today.

9           So with that I just want to thank you for the  
10 opportunity to share those comments. And I look forward to  
11 the discussion.

12           MR. POZEN: Thank you very much for all of your  
13 testimony; and I think that it was very useful.

14           And I guess I'm going to now ask various members of  
15 the committee to ask questions; and I'm going to start with  
16 people who were most involved with these issues and start with  
17 Mike Cook and then move on across -- down the aisle here.

18           MR. COOK: Thank you.

19           I would like -- I'm not going to ask a question.  
20 I'm just going to say to all of you, thank you very much for  
21 your input. Thank you very much your time and the thought  
22 that's gone into the comments you've made. We appreciate it.  
23 And we know you're all busy folks and you've got lots of  
24 people who are interested in what you think about lots of  
25 different subjects, so for you to come and spend time with us

1 and share your statements is appreciated. I will assure you  
2 personally -- and I'm sure my colleagues will do the same  
3 thing -- that every thought you've shared with us we will  
4 carefully consider. We will look at all of these inputs.  
5 And in particular -- and one of the things that I will be  
6 absolutely certain we do -- because this is like a lot of  
7 things where we've been through many drafts and have had lots  
8 of inputs and we do it and we do it and we do it and we think  
9 when we get to the end, we've got it all right; and we have  
10 excellent staff support to help us get it right. But to the  
11 extent that we have left open any areas of potential  
12 misunderstanding, I will assure you we will give those the  
13 highest level of attention, because a couple of things are  
14 most important.

15 I heard -- I thought I heard -- and, again, I'm not  
16 quite sure that maybe I was misunderstanding what was being  
17 said, but I thought I heard the notion that there would be  
18 instances where we would be supportive of the noncorrection  
19 of errors. And I would want to tell you we are absolutely  
20 not supportive of any notion of not correcting  
21 errors -- well, de minimis -- we're not talking about, you  
22 know, small, small things that all of us would agree wouldn't  
23 influence anybody's judgment. But any error that has any  
24 possibility of being significant we are expecting that it  
25 will be corrected and it will be corrected promptly. We'll

1 take a look at that specific point about the next time the  
2 financial statements are issued, because that was an attempt  
3 to add a practical aspect to it; but if it leaves open  
4 something that is broader in terms of possible mischief than  
5 what we thought we were doing, then we'll tighten that up,  
6 because that certainly was not our intent.

7 MS. ROPER: If I can clarify a broader concern we  
8 have about that, which is -- and I'll do it just by quoting  
9 from the investors' technical advisory committee to the FASB,  
10 certainly an expert group of investors.

11 When a material error is corrected, it is important  
12 that investors be provided corrected financial statements  
13 that present all periods in a consistent and comparable  
14 manner. Investors should not be required to adjust  
15 prior-period financial statements to make them comparable.

16 In other words, we should not shift the  
17 responsibility for getting the consistency and  
18 incomparability onto investors and away from the restatement  
19 process.

20 MR. COOK: Barbara, again -- and I don't want to be  
21 argumentative at all with them or with any of y'all, because  
22 we're all trying to get your help, not take sides on these  
23 issues. But that is -- that particular quote that's there --  
24 we don't disagree with at all. If there is a material error,  
25 the prior periods must be corrected; and the financial

1 statements for those prior periods must be corrected and made  
2 comparable if it's material. I believe that was what they  
3 were talking about. I'd agree a hundred percent with that  
4 statement. We are not suggesting that if it's material that  
5 prior financial statement wouldn't be corrected.

6           We have a view about the definition of  
7 materiality -- application of the guidance and the principles  
8 to make a judgment about whether something is material. But  
9 when it's material there must be timely correction of the  
10 prior financial statements to put them on a comparable basis.  
11 So I believe we are saying the same thing. Again, I'm going  
12 to go check our words to be sure that we haven't left open  
13 that possible misunderstanding, because I don't think when  
14 we're talking about a material error, we have any difference of  
15 opinion about what needs to be done.

16           MS. GRIGGS: I think that we did say that if that  
17 material error was not material to current investors -- and  
18 you pointed out something that we did not intend. We did not  
19 intend not to include potential investors. You're absolutely  
20 right. We meant current stockholders and potential  
21 investors, so that's a clarification that I think your  
22 guidance is helpful for.

23           But what we were saying with respect to errors is  
24 that if current investors and potential investors would have  
25 no interest in the correction of the errors because either

1 the financial statements are so old that they're not looking  
2 at it anymore or the company has completely changed or it  
3 affects the discontinued operation so it is not  
4 relevant -- and I'm sure there are other examples, we're just  
5 saying in those situations we didn't think it had to be  
6 corrected, not that it wasn't material at the time, just that  
7 it didn't have to be corrected.

8 MR. JONAS: Just to clarify, "corrected" means  
9 restatement. And the reason I think Mike gave his opening  
10 comment was, even if you have an error that you do not deem  
11 to be material, you will correct it no later than the current  
12 period. In other words, we did not countenance any errors  
13 being spread to the future.

14 MR. COOK: Or it's not corrected at all.

15 MS. GRIGGS: Yes. I guess if it affects retained  
16 earnings -- I mean if it's old, it would be corrected.

17 MR. COOK: But it would be corrected and disclosed  
18 is the presumption.

19 But anyway, the point I was -- I may have kind of  
20 gotten -- maybe I messed it up. I don't know. I don't think  
21 so. But the point I was going to make is that I don't think  
22 we have a difference of opinion. The words may not be as clear  
23 in some places as they should be. We need to take a very  
24 good look at that and be sure we are not appearing to  
25 countenance noncorrection of errors and noncorrection or

1 nonrestatement of items that are deemed to be material to  
2 those prior financial statements. So that was the notion I  
3 was trying to say.

4           And the same thing with SAB 99. We did not  
5 disagree with the content -- the existing content -- of SAB  
6 99. We just don't think it's balanced. It's sort of  
7 one-sided. Little items can be material, but big items maybe  
8 won't be. And we think the guidance needs to be sharpened up  
9 and balanced, and that's the recommendation. But it is not to  
10 abandon the existing guidance that says small things, if they  
11 involve management integrity, if they involve decisions about  
12 meeting loan covenants -- lots of different qualitative  
13 things -- the trends of earnings, things of that kind -- can  
14 be small and they can be material. We don't disagree with  
15 that notion at all. We're just suggesting that sometimes  
16 things that are larger than this minimum threshold for  
17 materiality may not be something that requires a restatement.  
18 But, again, I think we are fairly close on what we are trying  
19 to accomplish, but maybe we can say it better; and I  
20 certainly assure you, we will do that.

21           One thing that I'd like to repeat that we're all in  
22 favor of is fewer errors. So fewer items that any of us are  
23 even needing to talk about, but when errors are made one of the  
24 things we heard loud and clear and we listened to an investor  
25 panel very clearly say to us, we need better disclosure. We

1 need to deal with this dark period. We need to deal with why  
2 did something happen and what has been done to prevent it  
3 from happening again. Those are some of the very important  
4 things that are not necessarily coming out in the disclosure  
5 today and we are going to go back and be sure we say those  
6 things strongly enough, that those are an important part of  
7 the overall message as well.

8           But we appreciate all the inputs. If the wording  
9 isn't what it ought to be somewhere and it's leaving the  
10 impression that we are in any way advocating not correcting  
11 errors and not restating for material amounts when deemed to  
12 be material to the prior financial statements, we'll have to  
13 tighten that up and we'll take a look at that other point,  
14 Barbara, that you made as well.

15           MR. POZEN: John, did you have something?

16           MR. HUBER: Just to follow up on what you were  
17 saying about the dark periods, there is a trend with respect  
18 to companies' disclosing during the course of a restatement.  
19 I commend the 12b-25's that are being filed by companies  
20 that are doing this. I would submit that the type of  
21 information -- Steve was talking about revenue and  
22 cash -- the type of information that you can disclose depends  
23 on what you're restating for.

24           With respect to options dating, there were dozens  
25 of companies that were disclosing during the course of it

1 because of the ten-year restatement for a number of  
2 companies; and they could in essence give the information  
3 that an analyst would want for his or her model because this  
4 was an expense item under 123R or APB 25. And so the  
5 quantum -- my point is be flexible. But the quantum of  
6 disclosure that you can put in a 12b-25 depends on the scope  
7 and nature of the error that you're correcting.

8 MR. POZEN: Linda, why don't we -- you might as  
9 well take the floor here.

10 MS. GRIGGS: I just wanted to respond to John.

11 I think we recognize that some companies were  
12 providing disclosure in the dark period, but I think we heard  
13 that that was inconsistent. And I think there needs to be  
14 more consistently good disclosure made during the dark period  
15 so that investors know what's going on.

16 MR. POZEN: Greg, do you want to --

17 MR. JONAS: I have a question for Barbara.

18 I think, in approaching this, our goal was not to  
19 reduce the number of restatements but rather to reduce the  
20 number of unnecessary restatements -- unnecessary in the eyes  
21 of investors. And so I think we all try to look and see was  
22 there evidence that restatements -- some restatements -- a  
23 considerable portion -- were unnecessary or not. And we did  
24 see some evidence of -- some of us who look at these things  
25 for a living have our own anecdotal experience which

1 suggested to me that there were unnecessary restatements.  
2 But we also saw some statistical-type stuff. But it all  
3 suffered from something you pointed out as a flaw. And that  
4 is that it was based on market prices, the presumption being  
5 that if a restatement occurred and market prices didn't move  
6 that that was suggestive that the market did not care. You  
7 specifically said you rejected that argument. And if you  
8 could hum a few bars for us as to why you felt that thinking  
9 was flawed, we are all ears.

10 MS. ROPER: Happy to.

11 I mean right in the report, if you look into your  
12 footnotes, you'll find several reasons there are serious  
13 limitations on difficulty of measuring market reaction,  
14 impact on market price factors other than restatement,  
15 disclosure at the time of the restatement of other  
16 information, so already you've laid out some  
17 reasons why there are some serious limitations. In addition,  
18 as I'm sure you know, there's been research that shows that  
19 how the restatement is announced, how it's announced to the  
20 public has at least as much impact on the market reaction as  
21 the content of the restatement. There -- it's been suggested  
22 to me by someone who knows a lot more about this than I do --  
23 that the expectation of the restatement may already be  
24 recognized in the stock price in many of these cases, but  
25 that accounting information often lags -- more timely but

1 less verifiable information -- so that it provides feedback  
2 rather than a trigger for market reaction.

3           Beyond that, I think there's a benefit to  
4 encouraging small restatements that has nothing to do with  
5 market reaction. There's some interesting research underway  
6 right now at Wharton that looks at the link between  
7 over-confidence in management and accounting fraud. And the  
8 notion is that a lot of fraud does not start with an intent  
9 to defraud. It starts with a manager who's got some bad  
10 news, some difficult times they are trying to deal with, and  
11 they think that if they can just keep it under wraps for a  
12 short period of time they will get things turned around. And  
13 so maybe they engage in a little gray-area accounting. Maybe  
14 they fudge things a little bit, a little bit of minor  
15 earnings management.

16           If they don't turn it around they basically have  
17 two choices: They can restate and move on; or they can  
18 engage in a little more earnings management -- go a little  
19 farther. And now they are not only -- now they're covering  
20 their past tracks as well as dealing with the current  
21 situation. And it is sort of down this slippery slope that a  
22 lot of people wind up in fraud.

23           And I would just suggest that in a system that  
24 encourages getting errors out while they're small, while the  
25 market is unlikely to have a major reaction, helps to nip

1 this kind of fraud in the bud. And one that says if small  
2 investors aren't going to care, you can get away with it  
3 without correcting it, without restating it at this point  
4 helps to encourage that kind of fraud to persist.

5 MR. POZEN: I think it is important to clarify that  
6 there are two questions. One is whether the error is  
7 material and then second is how it's going to be corrected.  
8 Maybe we don't communicate this clearly enough.

9 Our view on the second question is all errors need  
10 to be corrected. The question was how they are going to be  
11 corrected. And one possibility is to have a restatement of  
12 prior years. The cost of that to investors, as has been  
13 elucidated, is the dark period. And we find that that's  
14 for -- a number of investors have told us it's a difficult  
15 time and they're not getting  
16 information.

17 So the question -- and I think I'm  
18 asking Steve since he's raised it -- is whether certain  
19 errors would be better corrected by correcting them out,  
20 filing an 8-K.

21 The other thing is we always said that whatever  
22 errors are corrected there ought to be disclosure that it's  
23 being corrected. So those -- it seems to me there are two  
24 separate issues that we ought to clarify. One is what's the  
25 definition of materiality, which from our point of

1 view -- what we tried to say was we are not trying to change  
2 the Supreme Court, because we have no power to change  
3 materiality.

4           There is -- one issue we did raise is the -- I  
5 guess you might say -- the nonsymmetrical nature of SAB 99.  
6 But our view was once there is a material error, it needs to  
7 be corrected but there could be two different methods of  
8 correction. One is through a restatement, which would have  
9 certain benefits of going back in time consistently for  
10 investors but would have certain costs. And then the  
11 question was whether there was another approach where you  
12 would correct the error and file an 8-K and have disclosure.  
13 So I think what we're trying to do is to separate these  
14 questions and to really to have a good discussion about both  
15 issues.

16           And so what I want to make clear is our view, as  
17 Michael said, all errors need to be corrected and all errors  
18 when you correct them, you need to disclose it. Exactly how  
19 it would be disclosed, I guess we probably hadn't gone as far  
20 as you're thinking, Steve, in terms of 8-K's, but we're not  
21 in favor of stealth restatement. So that to me is the debate  
22 here, so we ought just to make sure that it's framed in that  
23 way. And to the extent that we as a committee didn't clearly  
24 state that enough, then we need to be clear about it.

25           Yes?

1 MS. MOONEY: There was pretty deep-seated  
2 opposition to the asymmetrical aspect of SAB 99 in terms of  
3 ever considering a quantitatively large error immaterial, so  
4 I think I mentioned that in my testimony.

5 MR. POZEN: I understand.

6 MS. MOONEY: And then, secondly, there was very  
7 strong support, also, for correcting the prior periods.

8 MR. POZEN: Yes, I think you've made both points;  
9 and I'd like to ask you on the second point, because really  
10 there's a bit, I think, of tension here. When you have a  
11 restatement -- let's assume there's a material error, but we  
12 have two choices at that point -- is -- we have -- let's  
13 assume that it just affects the cash flow or doesn't change  
14 the net income. If we ask that company to do a restatement,  
15 we know there will be a dark period, perhaps as much as a  
16 year, versus having -- so there's a cost to that restatement as  
17 well as a benefit versus having that corrected with an 8-K  
18 filed to explain what's happened. So I would like to  
19 understand between your point of view and Manish's point of  
20 view how you evaluate that. We were trying to say that there  
21 were two ways to do it and that we could see from an investor  
22 point of view there could be costs and benefits on either  
23 side.

24 MS. MOONEY: Well, you could have a disclosure  
25 and --

1           MR. POZEN: The other alternative would be to have  
2 an 8-K and a disclosure but not to hold the company -- to put  
3 the company in a situation where it would be spending a year  
4 or -- God knows, we've seen more of that.

5           MS. MOONEY: But if you've got the number for the  
6 restatement and you've got the -- you know what it is, why is  
7 it tough to --

8           MR. POZEN: I think there is a big difference  
9 between making -- filing an 8-K and correcting the error  
10 versus going back and restating all your financials for the  
11 last five years; and that's what takes -- that's what we  
12 understood takes issuers a long time.

13           Manish, would you like to comment on it?

14           MR. GOYAL: Using the sliding scale as to how far  
15 back do you want to go as an investor to have accurate  
16 financial statements. I cover technology companies. Their  
17 product cycles are short and they change very quickly, so do  
18 I really care that in 1995 financial statements are accurate  
19 to the last decimal point? If they are going through an  
20 option investigation for the last ten years, maybe not.  
21 Maybe if the last five years' financial statements are  
22 accurate and they make an estimate what the error was for the  
23 previous five years and change the retained earnings, I'll be  
24 happy with that, as opposed to seeing the company go through a  
25 period -- a dark period of -- if that reduces the dark period

1 from two years to one year. And I have witnessed many  
2 companies one after another where unfortunately they fired  
3 their auditor and then they fired the management and the new  
4 management had to come in and deal with the old auditor to  
5 restate and now the old auditor is in tension with the  
6 company and is trying to cross all t's and dot all i's, which  
7 is taking an enormous amount of time. And I think that is a  
8 great disservice to the investors.

9 MS. MOONEY: That's the exception that proves the  
10 rule.

11 MR. POZEN: Well, let's have -- I don't know. I  
12 want to make sure that Greg and Linda have a chance to ask --

13 MS. GRIGGS: I just wanted to ask you, Elizabeth, a  
14 question. You say that all large errors must be restated and  
15 you don't see any reason for believing that some of those  
16 errors would not be material to investors. You say that the  
17 investors alone should make that decision. And I'm just  
18 wondering -- I mean that seems like a -- maybe you're right  
19 that in most cases large errors have to be restated, but I'm  
20 just wondering if you have any room for disclosure.

21 I guess, Barbara, you suggested that disclosure  
22 might be appropriate.

23 If a company believes that it isn't material to  
24 investors, even though it's a large error, would you be  
25 satisfied with good disclosure, transparent disclosure, about

1 the error?

2 MS. MOONEY: If it's not material under SAB 99 as  
3 it stands today, yes.

4 MS. GRIGGS: Well, again, SAB 99 doesn't really  
5 speak to large errors. But if management goes through the  
6 qualitative analysis and believes it's not material but it's  
7 a very large error, would you still believe that disclosure  
8 would be sufficient rather than restatement, I guess is what  
9 I was asking.

10 MS. MOONEY: It was 97 percent came back opposed to  
11 considering quantitative errors as not material. And they  
12 want to know what the restated number is and adjust it for  
13 themselves if they deem it after the description it's not  
14 material.

15 MR. POZEN: Let's just be clear. SAB 99 is  
16 asymmetrical. It says if you have a quantitatively small  
17 error, it can become material by being -- by qualitative  
18 factors. It doesn't address the situation that if you had,  
19 say, a 7-percent error where you could go the other way. And  
20 that is a point that has been made by a number of people to  
21 us. And all we were saying or trying to say was that we  
22 thought you should be able to consider qualitative and  
23 quantitative considerations in all cases.

24 Now, we would agree with you if there was a  
25 50-percent quantitative error. It's highly unlikely -- in

1 fact, I would say it would be almost -- almost -- impossible  
2 to think of a situation where it would be quantitatively  
3 going the other way. On the other hand, if there was a  
4 7-percent error or something like this, then you could  
5 consider whether there were qualitative factors that would  
6 come into play, just as if there was something that's  
7 1-percent, you should consider whether they're qualitative.  
8 So that's all we were trying to say: that you should be able  
9 to consider qualitative and quantitative errors in all  
10 situations.

11 John.

12 MR. HUBER: I actually think that the way you pose  
13 the question about materiality versus the form of the  
14 correction of error is really a focus that we should drill  
15 into, because I don't see the recommendations of the  
16 committee as being all that controversial. For years you've  
17 had corrections of errors under Paragraph 29 of APB 28. For  
18 years up until the time that it was done away with, APB  
19 20 -- the fact of the matter is 154 gives you the same sort  
20 of flexibility in that regard. My point is that the idea of  
21 what's material -- what the committee is really saying should  
22 be the sliding scale; and I think that's an issue that can be  
23 debated. But for years and years before this committee was  
24 instituted, errors have been corrected currently and there  
25 has been full disclosure that accompanies those errors.

1 That's something that has been established for years by GAAP,  
2 by APB --

3 MR. POZEN: So you're saying with a full  
4 restatement?

5 MR. HUBER: Without a full restatement, but with  
6 full disclosure. And I think that that is the principle that  
7 you're looking at with respect to both 3.2 and 3.3 of the  
8 development proposals.

9 MR. POZEN: Yes, Ed, please.

10 MR. NUSBAUM: Just a follow-up on a couple of other  
11 comments that were made.

12 Jack, you made a comment about training. And I was  
13 curious as to what kind of behavioral changes you were  
14 looking for and, of course, anyone else as well for this  
15 training.

16 MR. ACOSTA: Well, as you are well aware today,  
17 there is a lot of guidance provided to issuers of financial  
18 statements; and there's many different auditing firms; and  
19 the interpretation around those can be quite different,  
20 depending on what company you're dealing with or what  
21 auditing firm or what specific auditors you happen to have at  
22 that point in time.

23 But my comments center more around "Is there a  
24 methodology so that we can look at facts and circumstances  
25 and draw a similar conclusion?"; and that has been a challenge

1 throughout the industry; and given the -- I mentioned the  
2 litigation that goes on as a result of being wrong or  
3 presumed wrong in this marketplace. The desire to give out  
4 more information knowing that that will be used in a litigation  
5 makes it very difficult for people who are looking at a  
6 restatement within their company. So the consistency is I  
7 think the fundamental issue that I would have in terms of  
8 moving forward to the point where you can use the scale, if  
9 you have the sliding scale and you're looking at -- and you  
10 come to a conclusion, would a reasonable person look at those  
11 same facts and circumstances and come to the same conclusion?  
12 And chances are there's going to be a lot of interpretation  
13 around that. And how do you get to the point where people  
14 can feel comfortable, given certain facts circumstances and  
15 draw a certain conclusion and be able to present that to the  
16 marketplace and have it be okay?

17 MR. POZEN: Ed, did you have a --

18 MR. NUSBAUM: Yes, one other quick question, either  
19 for John and for either Steve or perhaps -- I just want to  
20 talk about this -- or maybe the auditors should do it -- is  
21 there any role -- what is the appropriate role for the SEC  
22 staff in this whole process, if any?

23 MR. HUBER: As a person who works with the SEC  
24 every day, the SEC staff is involved in review of periodic  
25 reports and registration statements all the time. I actually

1 think that the idea of the staff looking at this from the  
2 standpoint of the principles that the committee is setting  
3 forth is a very good and practical affirmation of a lot of  
4 feeling on the staff. I actually think that from the  
5 standpoint of how it works, the staff has got to put itself  
6 in balance with courts and with the FASB, with the PCAOB.  
7 That balance is very important. But the work of this  
8 committee can, in essence, verify a great deal of feeling in  
9 terms of the review process of the Division of Corporation  
10 Finance. The idea of what a reasonable person is -- I  
11 don't know if we'd recognize her when she walked in the room,  
12 but the fact of the matter is the staff of the Division of  
13 Corporation Finance makes materiality judgments every day  
14 in the review process, as so do the professionals that work for  
15 law firms, accounting firms, and companies.

16 MR. POZEN: Steve, did you want to say something?

17 MR. BOCHNER: I think a great thing your committee  
18 could do is just provide some better guidance, because when  
19 these decisions are made, we sit down with the issuers and  
20 the auditors and we hunker down and we figure out whether  
21 it's material. And then ultimately there's a filing or a  
22 correction; and the staff has to decide did they analyze SAB  
23 99 right? Did they apply 108 right? And I think there's so  
24 many fiscal periods to look at and so many different ways.  
25 And then you throw in the reasonable-investor test and you

1 really -- you can do a lot of work and a lot of good  
2 thinking; and the staff may, for completely valid reasons,  
3 disagree with you.

4           So I think -- I'm just excited to have perhaps a  
5 little more guidance coming out that will make it more likely  
6 that these judgment calls between issuers, auditors, lawyers  
7 on the one hand and the staff on the other hand are more in  
8 sync and actually will reduce the dark period and accelerate  
9 the correction, whatever they may be.

10           MR. MEISEL: I would echo both those comments by  
11 just adding that I think Proposal 3.1, it talked about the  
12 education and it talked about preparers and auditors, but I  
13 think you've heard here reaching out to attorneys, to  
14 investors, and to regulators as part of that process I think  
15 would be very useful.

16           MR. POZEN: I think, just to be clear, we at least  
17 discussed the possibility of having a much more definitive  
18 test. But I think we quickly realized that that was  
19 not possible; and I think what -- you know, we do think it's  
20 a facts and circumstances; and all we really said on  
21 materiality was that we believe that quantitative and  
22 qualitative factors should come into play.

23           I think the way in which we tried to be helpful,  
24 Jack, to your question, which -- maybe we're at David Sidwell  
25 anyway -- is that through another recommendation, we have

1     tried to, let's say, narrow the scope of interpretation.

2                     And, David, I don't know whether you just want to  
3     answer that and any questions you might want to ask the  
4     panelists.

5                     MR. SIDWELL: We spent a fair amount of time  
6     talking about the fact that we want to encourage where the  
7     SEC staff sees trends which they believe are not acceptable,  
8     so a range of interpretation which has gone beyond what they  
9     view as acceptable, that that gets disseminated in a way that  
10    is both complete and thorough to all registrants at the same  
11    time, as opposed to through the comment period. I think we  
12    acknowledge, however -- and I think this is the question --  
13    that if are going to move to more of a principles-based set of  
14    standards, there is going to be this period of interpretation  
15    where it may be that there is a broader range of  
16    alternatives that are at least seen initially as companies  
17    with their advisers interpret the principle-based potentially  
18    differently. It takes some period of time to narrow those  
19    range of alternatives.

20                    So it would be interesting to see your views on,  
21    one, how you feel about a period of time where when a new  
22    standard is issued that there's this period where there may  
23    be different interpretations in the marketplace. It may take  
24    some period of time to narrow those range of alternatives.

25                    And, secondly, are there any instances there where

1 you believe that if a company's management has acted in good  
2 faith that those are prospective, as opposed to retrospective  
3 changes? And we as a committee have spent a fair amount of  
4 time on both of these issues. I think it would be an  
5 interesting adjunct to the discussion we've just been having  
6 if you have some views on those.

7 MS. ROPER: We do. We're concerned that you're  
8 encouraging companies to test the edge of the envelope if  
9 there's some sort of implicit understanding that during this  
10 period that anything goes; or, if not anything goes --  
11 that's an exaggeration, of course -- but that everybody is  
12 free to interpret.

13 And I guess what I come up against is,  
14 when I look at this, I look at a past history where we have  
15 seen all of these gains. We have been through this and it  
16 was extraordinarily painful for investors and it was  
17 extraordinarily painful for the market and the economy. And it  
18 makes me very nervous when we see people talking about some  
19 kind of safe harbor.

20 We can't second-guess people. I think you should  
21 second-guess bad judgments. So I'm concerned that as part of  
22 this sort of broader set of proposals that something that  
23 says you're not -- whatever you do now -- you're not  
24 going to get corrected; you're not going to get  
25 second-guessed. I think it will be gamed. And I think you're

1 really risking a return to the kind of practices that we just  
2 went through a little over five years ago.

3 MR. POZEN: I think we need to clarify two things.  
4 One is we not only did not propose a safe harbor. We questioned  
5 whether the SEC had the authority to have a safe harbor; so  
6 that is not our proposal. People have said that we proposed  
7 the safe harbor. To the contrary, we questioned whether it  
8 was even legal authority to do that. That will be discussed  
9 more in the second session. But I think if we haven't made  
10 our view clear enough, we will in the final report.

11 MR. SIDWELL: I think in one way which is less  
12 confrontational in thinking about the question is, let's say,  
13 five or six different ways of interpreting a standard emerge.  
14 So basically everyone says those seem reasonable. So the  
15 question is, however, do you just want to say that narrowed  
16 as a range of alternatives? I'm not even trying to make it as  
17 if somebody's really trying to push an envelope. The way the  
18 standard was written, the way it's been interpreted, has left  
19 a fairly broad range of interpretation.

20 And basically everyone says, You know what? Let's  
21 now narrow it. So not in any way trying to say that any  
22 company has acted inappropriately, because I think, just to  
23 second what Bob has just said, I think for us there is no  
24 doubt that on a registrant-specific matter where that is the  
25 case, we would say that should be called on as soon as it's

1 observed. So this is where, when you're in a world of less  
2 rule-driven standards but where there is more judgment, there  
3 is presumably by definition going to be some period where  
4 there are people making different judgment calls and --

5 MS. MOONEY: What is really interesting is the  
6 disclosure from an auditor perspective as well as management  
7 in terms of where those judgments are in this case.

8 MR. POZEN: We shouldn't get too far into this, but  
9 just to sort of make clear on this point, but if there is a  
10 new standard adopted what we were saying is that FASB and SEC  
11 should look especially carefully about how it was being  
12 interpreted and to make sure that it did not have too broad a  
13 spectrum of interpretation and try to keep it narrow and if  
14 necessary amend the rule, if necessary issue an  
15 interpretation. So I think at least our thinking was the  
16 problem now is that a standard comes out and it may be very  
17 long and there may be very many different ways in which it's  
18 interpreted. It may not even be reconsidered for ten years.  
19 So the effort here was to say, as good as you can, you try to  
20 predict a standard is going to work, but when it comes into  
21 play, you start to see what happens; and we're trying to  
22 narrow the range of interpretation during that period. That  
23 was the thrust of that thinking.

24 MR. BOCHNER: So am I wrong in thinking that those  
25 who diverged from that, do they have to go back and correct

1 then to the treatment that is determined to be acceptable?  
2 Because my understanding is -- and maybe I misread it -- was  
3 if they diverge during that period they wouldn't be  
4 required -- I mean that would be sort of an understandable  
5 leeway for interpretation and that they wouldn't have to  
6 correct. So you have a period in which -- and I think if you  
7 have a system that says, Okay. We understand there's going  
8 to be some divergence, but there's accountability at the end  
9 of the line, then you don't get the same extreme span.

10 MR. POZEN: I think it's a fair question about  
11 whether we were specific enough on that, but I think the  
12 answer that we were trying to search for is something like  
13 this: There is a reasonable band of interpretation; and I  
14 think every accountant would look at it and say, let's say,  
15 this way or that way. And if it was in that area, then if  
16 ultimately the SEC said, okay, go A not B, then if you went  
17 B and it was in the reasonable band, it's okay.

18 On the other hand if you were at C, D, or E, which  
19 were not supportable, then you're going to have a  
20 restatement, you're going to have an enforcement case. So  
21 that was the attempt to try to differentiate between an  
22 ambiguity in a standard -- a question where audit firms  
23 reasonably thought they were doing the right thing, but it  
24 was in a narrow band versus a situation where someone just  
25 went off on a frolic or detour, whatever you want to call it.

1 So that was our attempt there.

2 MS. ROPER: Well, I would be more comfortable with  
3 that approach. It isn't how I read it. Those are awfully  
4 hard lines to draw, where -- at what point you have to  
5 restate --

6 MR. POZEN: What we're doing now -- the fact what  
7 we do now should bother you a lot more, because what we do is  
8 adopt the standard and then people interpret it a whole  
9 series of ways and it goes on for five, ten, twenty years;  
10 and then finally somebody says, "Well, let's see, after all  
11 these different things, maybe here's the way to do it." What  
12 we are saying is, "Let's be realistic when that standard is  
13 adopted." No matter how well you try to predict it, we don't  
14 know its impact, so let's look very closely. So, if  
15 anything, registrants are going to know that during that  
16 period everyone's looking very closely; and then we're going  
17 to try to figure out what is the right answer within that  
18 short time period.

19 MS. ROPER: I think that having that kind of  
20 scrutiny and having that kind of review early after a  
21 standard is released is very positive.

22 MR. SIDWELL: I think, Barbara, too, we've talked a  
23 lot today about the value of disclosure. I think this is  
24 also an area where we would not expect to see a change as a  
25 result of that narrowing what is acceptable to occur without

1 having full disclosure to the magnitude of the change and  
2 giving investors adequate information to be able to analyze  
3 the impact of that change.

4 MR. COOK: I just was going to ask the panel  
5 collectively, because I don't think I heard a comment about  
6 this, but to me it's one of the more important things that we  
7 were trying to communicate in the recommendations is this  
8 investors' perspective in making judgments about materiality  
9 restatements, whereas today we talked to a lot of folks about  
10 this; and the vast majority of the feedback we got was these  
11 judgments are not being made in the broad sense of investors'  
12 perspective about trend and earnings, mix of information,  
13 what's important to the marketplace. But, rather, how big is  
14 it? And if it's this big, it gets this kind of a treatment.  
15 If it's this big, it gets that kind of a treatment.

16 One of the most important things I thought we were  
17 trying to communicate -- I would hope you would agree with,  
18 but if you don't we'd like to hear about it -- is that we'd  
19 like people to think of it from an investors' perspective,  
20 which includes quantitative considerations. It doesn't  
21 eliminate quantitative considerations. It also gets people  
22 thinking about what really is important to the marketplace as  
23 opposed to just is it 5 percent or more or 3 percent or less  
24 or whatever those norms are today. Do you agree with the  
25 notion?

1           MR. POZEN: Steve and then Manish.

2           MR. GOYAL: You know, there is a quantitative  
3 aspect to it. How much, how big, of an error should be  
4 restated? And then there should be a timing aspect of it.  
5 There should also be a timing aspect of it. How far back do  
6 you want to go to restate? Because the further back you go,  
7 you have -- it takes longer. And then, again, the timeliness  
8 is compromised. For those who are proponents, you know, of  
9 correcting all errors by restatement should also think about  
10 do we want to go back five years for restatement? Or for  
11 smaller errors do we want to go back ten years? Sometimes  
12 the errors may not be as relevant to a current investor if  
13 they occurred many years ago.

14           MR. COOK: Do you agree with the basic notion: An  
15 investors' perspective is what we are trying to apply and  
16 should be trying to apply in making these judgments?

17           MR. GOYAL: I'm sorry. I --

18           MR. COOK: I didn't disagree with anything you  
19 said. I was just sort of re-asking the question I asked for.  
20 Do you agree that the notion we have here that the investor  
21 perspective is the perspective that should be brought to  
22 bear, including quantitative --

23           MR. GOYAL: Oh, sure. Absolutely.

24           MR. POZEN: Steve. And then I think Scott has a  
25 question. And Susan has a question; and Jeff has a question.

1 Just so that everyone has a chance to talk.

2 MR. BOCHNER: I certainly agree that the investor  
3 perspective is the right one and clearly the one that SAB 99  
4 instructs us in sort of the issuer community -- advising  
5 community -- to use. I think now it only cuts one way, so  
6 the analysis really is how big is it? Gee, if that's big,  
7 restate. That's often a default today and you never get to  
8 reasonable investor, even though you try; and I've had these  
9 discussions before.

10 And then if it's not that big, then you go through  
11 the qualitative analysis and one of those things can sort of  
12 pop up and go, jeez, we did kind of -- we had the  
13 tyranny of small numbers and it changed the profit to a loss  
14 and I guess we've got to restate. The fact scenario that I  
15 think is going to focus on is one I've had where seven  
16 quarters ago there was a classification issue. It doesn't  
17 change EPS at all. And if Manish is my reasonable investor  
18 and he says, "Look, from an investor perspective, that doesn't  
19 make any difference to me at all. I'm not going to change my  
20 decision to buy or hold. Yeah, it looked kind of big, but it  
21 doesn't matter. It doesn't change EPS."

22 And I think all we're -- or some of us -- are  
23 suggesting is that in that scenario paying the money to the  
24 auditors or putting everything on hold and going through the  
25 restatement process that costs x dollars, wouldn't it be

1 better just to be able to disclose that if we conclude a  
2 reasonable investor doesn't care and pay x minus y dollars.  
3 And I think -- I, for one, think that would be a good result.

4 MR. POZEN: Scott.

5 MR. EVANS: Actually, it's just the topic I wanted  
6 to follow up on, at the risk of beating this to death, but it  
7 does seem there are still -- auditors, preparers, and lawyers  
8 talking past investors who are well represented here on this  
9 issue. And your comments, Manish, Elizabeth, and Barbara,  
10 when you were talking, suggested that the primary concern was  
11 that the transparency in disclosure was going to be  
12 sacrificed in order to reduce the costs of restatements.  
13 While you agreed about doing something about the dark period,  
14 this was something that you weren't willing to yield on. You  
15 didn't think we had a restatement problem per se.

16 The panel came back and said, We're not going to  
17 sacrifice disclosure. We'll use the 8-K; we'll use some sort  
18 of other mechanism, but we just don't want to go through this  
19 dark period creating restatement process.

20 There still seems to be some reluctance on your  
21 part. One of the things, Barbara, that you said is that you  
22 don't want to impose a burden on investors. What burden or  
23 lack of transparency do you see in the type of suggestions  
24 that are being made for disclosure but not for restatement in  
25 these types of situations and why would that not do the trick

1 for you as investors -- retail investors or institutional  
2 investors?

3 MS. ROPER: Well, as I said, the point is that if  
4 you want to be able to compare period to period to period,  
5 they need to be prepared on a comparable and consistent  
6 basis; and if they're not prepared on a comparable and  
7 consistent basis, then the burden shifts to the investor to  
8 make those adjustments, instead of being able to look at the  
9 periodic reports and know that in each case they're  
10 consistent.

11 Now, obviously, there is some point where that  
12 becomes a waste of effort and there are certain situations.  
13 But I think it is -- we have a history of issuers and  
14 auditors getting together and deciding that things aren't  
15 relevant to the reasonable investor. I mean we have -- we  
16 have lots of cases that start with materiality  
17 being manipulated by an issuer who said -- Waste Management  
18 being another one -- where the issuer said it's not material  
19 and the auditor agrees. And so where there is a  
20 question -- as I said, we can -- we can talk about an  
21 approach that says, Okay, we're going to disclose the  
22 uncorrected errors. This is the nature and amount of those  
23 uncorrected errors. This is the reason for determining that  
24 they're immaterial. We can talk about that as a way to deal  
25 with some of these borderline cases, but in general we think

1 that we -- that we benefit from a more conservative approach  
2 that investors benefit and market confidence benefits.

3 MR. POZEN: I think the question that Scott is  
4 asking, he's assuming it's material. Then you have a choice.  
5 You can either go back and have a full restatement or you can  
6 correct and have an 8-K. I don't believe, in either Enron or  
7 Waste Management, anybody disclosed the material error in any  
8 form --

9 MS. ROPER: 1997, Enron had adjustments suggested  
10 by Arthur Andersen that would have reduced net income that  
11 year --

12 MR. POZEN: But when you have --

13 MS. ROPER: -- from 108 million to 54 million; and  
14 Andersen agreed to go along with it. Had they stopped at  
15 that point -- had they -- had they used today's conservative  
16 approach to materiality, we might not have gone through --

17 MR. POZEN: I don't know think you're being fair to  
18 Scott's question. Scott isn't saying it would have been  
19 disclosed.

20 MS. ROPER: But I think I answered his question in  
21 terms of saying we want period-by-period-by-period  
22 comparability between reports.

23 MS. MOONEY: There have been quite a few academic  
24 studies come out that do say that the quality of the  
25 disclosures do not come close to the quality of what you get

1 on these financial statements in terms of audit confidence  
2 and integrity of the numbers.

3 And, secondly, investors across the board  
4 do download the numbers from the data services; and if it's  
5 in the disclosure it does get lost in time; and you  
6 can't -- I mean I had a couple of responses where they want  
7 ten to twenty years. Now, I'm not going to say that that is  
8 standard, but there are analysts that --

9 MR. EVANS: So it's a question of quality and  
10 consistency of the information. And particularly it's  
11 reached the retail investors, who would have a harder time  
12 coping with unique disclosures that don't fall into that data  
13 services and so forth. That's what gives you the reluctance?  
14 So if there was a way of creating disclosure without the  
15 disruptive process that we have for restatement disclosure of  
16 the metric comparability and historical consistency  
17 methodologies, then that would be fine with you? It's a  
18 question of the data quality that you're looking for.

19 MS. MOONEY: I'd have to see what it looked like.

20 MR. POZEN: I want to make sure that it's Susan and  
21 Jeff and then we get to other people.

22 Susan.

23 MS. BIES: Thanks, Bob.

24 I want to sort of take this in a little bit  
25 different direction. We've been focusing an awful lot on the

1 numbers themselves and the restatements and the  
2 comparability. In the 3.2 discussion, though, there are  
3 suggestions about disclosures, about what was the root cause  
4 of the error, how was it detected, what is management doing  
5 about internal controls, did it affect debt covenants and  
6 other things. Could you talk a little bit about these kinds  
7 of issues, because some of the things we are  
8 suggesting -- for example, if it was due to a system  
9 conversion that you detected an error, you might not have the  
10 historic data to do the restatement. Would it be sufficient  
11 to just say it was detected in the audit of a new system; we  
12 don't have the old data; or it was a lot of business we just  
13 started -- would that help with some of this? Because I  
14 found this section where it talked about the nature of the  
15 errors and management controls and corrections going forward.  
16 I thought it may be helpful to deal with some of these gray  
17 areas around judgment, but none of you really focused a lot  
18 on it; and I just would like to get any reaction about that  
19 Section 3.2 discussion.

20 MR. POZEN: Anyone want to respond to that? I  
21 think Susan is saying that the disclosures we were suggesting  
22 go further than a lot of the disclosures that you see now, so  
23 it's not --

24 MR. HUBER: Let me start out. I think the idea of  
25 an 8-K is a wonderful idea, if you're prepared to disclose.

1 The concepts here are very difficult concepts. The idea of  
2 all restatements created equal is incorrect. All  
3 restatements are not created equal. They are different and  
4 they have different people, different issues. Just to add to  
5 what Susan was talking about, say, for instance, you acquired  
6 a new company and you found out that the new company had  
7 fraud; and all of a sudden you're sitting there with a  
8 problem. I think what the staff tried to do with respect to  
9 4.02 of 8-K is the maximum that you can do with respect to an  
10 8-K on a timely basis to say whether the financial statements  
11 are or are not reliable, okay? After that you start to go into  
12 this question of what can you disclose, when can you disclose  
13 it? And I agree with the idea of getting rid of the dark  
14 period. I'm all for the idea of 12b-25's coming out on a  
15 periodic basis and disclosing what you know when you know it.  
16 But please understand that in the normal course, if there is a  
17 hint of fraud, the practice today is to bring in an  
18 independent law firm with forensic accountants to do a  
19 full-scale and complete investigation; and people start to  
20 focus on that investigation.

21           Auditors don't want to have things disclosed unless  
22 and until that investigation occurs. The example there is  
23 Krispy Kreme. Several years ago when Krispy Kreme's  
24 investigation was done and the audit firm bounced the  
25 investigation, they had to go back and start over again. So

1 the concept of disclosing things on a regular basis is  
2 complex; and it has lots of nuances with it; and the fact is  
3 you're not helping investors -- and I can give you  
4 examples -- by putting out information that you then have to  
5 recant. Saying something is important and timely means it's  
6 also full, complete, and accurate.

7 MR. POZEN: That's exactly our dilemma in the dark  
8 period, that it's hard to encourage these issuers to  
9 disclose, because they're all afraid that they have to wait  
10 till the completion.

11 Manish?

12 MR. GOYAL: I'm totally agreeing. All I'm going to  
13 suggest is if there is a way to push the companies to have a  
14 standardized disclosure or a set of comments they must make  
15 during dark period, that would be beneficial.

16 MR. HUBER: My one response to that -- the  
17 framework will go a long way to do that from a professional  
18 standards standpoint and from the standpoint of inside  
19 auditors outside the company as well as attorneys and  
20 accountants and business people inside. The framework actually  
21 gives that level of confidence that can actually help people  
22 with respect to getting out of the dark ages and going into the  
23 sunshine.

24 MR. POZEN: Jeff.

25 MR. DIERMIER: Scott was talking about and that is

1 it seems to me that I certainly at this point don't have an  
2 adequate set of information in terms of the component costs  
3 of restatements. I have heard a lot of talk about  
4 dark-period costs. Well, they certainly seem to be pretty  
5 significant, but as it was suggested earlier, when we finally  
6 get through all the correction and actually figure out what  
7 the correction is, then if you don't restate past figures,  
8 then all investors end up doing that, so hundreds and  
9 hundreds of people -- my staff -- many years would be  
10 guessing all the time. And so you can have hundreds do it or  
11 you can have a company do it. Now, of course, maybe  
12 tomorrow, with XBRL, the ability to restate and reclassify --

13 MR. POZEN: I don't think we should count on that  
14 to solve all these problems.

15 MR. DIERMIER: Not in Bob's lifetime. In segments,  
16 not focused just on the earnings-per-share number. I think  
17 that we really would be helped if we had a better  
18 understanding of the costs of the components of this  
19 restatement issue. And I don't know if the Treasury report  
20 is going help us there and how far along it is.

21 MR. POZEN: It's a good question and I am not sure  
22 how much will come out of that study, but it is something to  
23 the extent that -- Manish or Stephen -- could give us some  
24 concrete examples or some cost data on that that would be  
25 helpful in terms of our determination.

1 Bill, I want to give you a chance to ask questions.

2 MR. MANN: You know, I -- as someone who also deals  
3 a lot with individual investors, I agree with Barbara's  
4 sensitivities greatly; and I have a little difficulty coming  
5 at the issue from one of allowing preparers to game the  
6 system. My question is at what level do you consider are we  
7 fomenting fraud? Are we making it so that it's easier for  
8 companies to deceive investors in the hope of making it  
9 easier for them?

10 MS. ROPER: I'm not sure I understood the question.

11 MR. MANN: In terms of making it -- in terms of  
12 making it easier for investors to -- I mean really the  
13 problem that we have is -- I can think of certain companies  
14 where you get a phone book and you have things that are  
15 disclosed but they're hidden in plain view. So it's  
16 something that we're trying to get at from a complexity  
17 standpoint. At what point do you think that we are making  
18 things too complex?

19 MS. ROPER: I guess I would say a couple of things  
20 to that. A recent academic study shows that complexity  
21 actually doesn't appear to be a significant factor in most of  
22 the restatements occurring today. They looked at restatements  
23 across the '90s and 2000s; and the majority of them are just  
24 plain errors. And then there is the issue of standard  
25 complexity -- the complexity of the accounting standards

1 themselves but they found very little evidence that trying to  
2 get around bright lines or what not were significant issues.

3           But beyond that, our real concern is the kind of  
4 culture you create, the kind of message that you send to  
5 companies. Most of the things that are in, say, SAB 99 are  
6 in direct response to practices that were prevalent at the  
7 time it was adopted; and I think, you know, we find  
8 ourselves, at least as investors, in an atmosphere of where  
9 finally it is conservative and there is an assumption that  
10 it's better to get it out and get it out fast and correct it,  
11 get it out and move on. I mean we breathe a sigh of relief,  
12 only to hear that this is now evidence of a problem;  
13 and that is confusing to us. And that to us, when the  
14 messages that come out of the SEC or committees like this or  
15 what not are that we need to lighten up. Ah, no. So it's  
16 big, you know, maybe it's not so important, you know. So  
17 that just to us sends the message of a cultural change; and I  
18 think that encourages not so much  
19 fraud -- like I said, it's the sort of kind of accidental  
20 fraud I just described earlier where people slip into errors.

21           But in response to your earlier question, yes, we  
22 are supportive of the idea of doing better disclosure, both  
23 around financial statements themselves so investors are  
24 better able to understand what's in there and during the dark  
25 periods. I think that's a positive proposal that -- and if

1 you go and look at the letter from the ITAC, the Investors'  
2 Technical Advisory Committee, they have a number of good  
3 suggestions with that regard that we would also endorse.

4 MR. POZEN: I think the study you're talking being  
5 did say that complexity is not a critical factor in terms of  
6 the restatements. It doesn't say it's the way standards are  
7 set -- written. It also had an interesting finding that the  
8 restatements were being made now on smaller and smaller  
9 amounts; and so I think that's something that people have to  
10 take into account also.

11 MS. ROPER: Will it be a success if we go back to  
12 having restatements with really big market impacts? I mean  
13 will that be a measure of the success of this committee?

14 MR. POZEN: Again, the question that's being asked  
15 is whether you're going to have correction and disclosure  
16 versus a full restatement. No one is suggesting that you're  
17 not going to have disclosure and a correction. I can assure  
18 you that if within Enron somebody had disclosed those things,  
19 they wouldn't have gotten very far. It did not matter  
20 whether it was a restatement or not. So we are fully  
21 supportive of the notion of a correction and a disclosure.  
22 The only question that we were debating, as Scott said,  
23 whether you need to go back and restate for three, five, ten  
24 years. I hope that we can keep those two questions separate,  
25 because they are, at least in our view, very separate

1 questions.

2 MR. EVANS: It sounds almost like the burden of  
3 proof for you all is that this notion that we have about  
4 disclosure without restatement that the quality of the  
5 disclosure has to be such that investors feel that there's no  
6 loss versus what they would have gotten from a restatement.  
7 And that's the burden of proof that you would have to accept.  
8 Is that a fair --

9 MS. MOONEY: The feedback I got is they want to see  
10 the restated income statement on all the components restated  
11 and a disclosure -- what's been done -- and decide for  
12 themselves if that is something they should exclude as  
13 immaterial. So they want to see the restated amounts --

14 MR. POZEN: I want to make sure that we give Ed and  
15 Tom a chance to raise any questions.

16 MR. MCCLAMMY: No specific question. I think one  
17 thing we need to keep in mind is, as we looked at this, we  
18 were trying to, say, get a balance between getting the  
19 information out there and the cost of providing the  
20 information. It's been brought up a couple of times there's  
21 huge costs to companies that go through this, because people  
22 are trying to protect their positions as they go through it.  
23 So it really comes down, I think, to a cost-benefit analysis  
24 of the process versus the benefit to the investors. But I  
25 think the investors do need to realize that there is a cost

1 to the investors of going through it as well. So I think, as  
2 several people have said, we are not trying to cut off  
3 information at all. We are just trying to come up with a way  
4 of getting that information out that is not costly to the  
5 company, i.e., therefore costly to the investors; and there's  
6 a balance that we need to work on to get to  
7 the right spot on that.

8 Steve -- I'll turn the floor to Steve.

9 MR. BOCHNER: You could actually imagine, if your  
10 committee did this the right way, that this would cut the  
11 other way and you would have more -- you would -- today  
12 there's a lot of pressure -- issuer pressure -- not to  
13 restate when there's a close call. There's a lawsuit that  
14 comes in. There's expense. There's a going dark. If you  
15 take that pressure away and you say, Look, if you're going to  
16 correct you got to file if it was material to a prior period  
17 way back when, you're going to have to file an 8-K. You may  
18 not have to restate. I think you could actually end up with  
19 more disclosure. Would sort of take all this pressure off  
20 the issuers trying to manage their business and doesn't want  
21 to go dark and doesn't want to get sued and so on; and you  
22 might actually encourage more error-correcting; or at least  
23 the incentives might work that way.

24 MR. POZEN: Tom, did you want to --

25 MR. WEATHERFORD: Well, being a former CFO and

1 current audit committee chair, I've never had that much  
2 experience with restatements, but the ones I have had it's  
3 obvious there's a lot of confusion around at the company  
4 level and even the individual partner level of what should be  
5 restated. And a lot of times the audit firms will push it  
6 back on the companies to say, "Is this material to the  
7 investors?" So you've got the cat basically saying what he  
8 should do in terms of being in the hen-house or not? I think  
9 that a lot of restatements are done today because companies  
10 feel that it's better to restate, even if it's immaterial.  
11 And I think when you see the word "restatement" out there on a  
12 press release or whatever, it causes a lot of panic. And I  
13 think the individual investor overreacts to that, loses in  
14 that case. So when we talk about material restatements,  
15 we've got to figure out; and I think the impact on the  
16 investor is important. And I think if you restate  
17 everything, companies are not perfect. Errors happen. And I  
18 don't think Enron would have stopped being fraudulent just if  
19 they had done a restatement. Crooks are crooks and crooks  
20 will always be crooks; and you're always going to have a high  
21 percentage. But I do think today, as an audit committee  
22 chair, what I see is the role of the auditor and the company  
23 saying, "We need to restate, because it's the safest way of  
24 doing it, even if it's immaterial. And I think there needs to  
25 be a balance here."

1           MR. POZEN: Are there other people who would like  
2 to -- from the committee -- make a comment or any questions?  
3 Greg?

4           MR. JONAS: These are quick and certainly not on  
5 the grand scale of some of the questions that have preceded  
6 it, but I wanted to make sure I understood, Elizabeth, a  
7 couple of the points that you made. One was, in your opening  
8 comments, you noted that you thought materiality ought to run  
9 to the geography on the income statement, not just the bottom  
10 line. Were you under the impression from reading our  
11 material that we are not sympathetic to that observation?

12           MS. MOONEY: Yes.

13           MR. JONAS: Okay. So you felt we were kind of  
14 bottom-line oriented in our view of materiality, that we  
15 weren't thinking about geography on the balance sheet or  
16 income statement or cash-flow statement?

17           MS. MOONEY: Yes.

18           MR. JONAS: That was not our intention, so that's  
19 why I'm clarifying, is I want to make sure that what gets in  
20 the final report is clear on these points.

21           Were you under the impression that we were  
22 suggesting basically to throw out SAB 99 and rewrite it?

23           MS. MOONEY: That it was going to be rewritten or  
24 tweaked to some degree.

25           MR. JONAS: Tweaked or rewritten?

1 MS. MOONEY: Tweaked, changed.

2 MR. POZEN: We were clear that we were saying that  
3 quantitative and qualitative should be considered in all  
4 situations. Other than that --

5 (Simultaneous discussion.)

6 MR. JONAS: Our perception is that is we are making  
7 a very modest proposal to the interpretation. In fact, we  
8 didn't even argue -- we talked ourselves into thinking  
9 anyway, that we weren't even changing SAB 99; we were  
10 only -- we were making clear --

11 (Simultaneous discussion.)

12 -- in order to change how it's actually applied in  
13 practice. But was your perception from reading our stuff  
14 that we were more than tweaking, we were proposing some major  
15 changes?

16 MS. MOONEY: No.

17 MR. JONAS: That's all I have. Thank you.

18 MR. POZEN: Yes, Jeff.

19 MR. DIERMIER: This is related to Tom's comment.  
20 We might ask the staff to see if there are any studies done in  
21 terms of the response -- I know market prices --

22 Barbara, you're absolutely right. A lot of this is  
23 out in front of the marketplace. But I firmly believe the  
24 market does a great deal of discrimination in terms of the  
25 type of restatement, the quality. And that it's a typical

1 kind of corporate attitude that, "Geez, if I restate, my  
2 stock's going to be killed" and that's that fluff that's out  
3 there. And I think there's a great deal of discrimination  
4 that goes into, depending on the disclosure of the  
5 restatement. Maybe a few years ago during the midst of all  
6 the kind of bad behavior, the market would have that very  
7 emotional behavior; but the market is a learning mechanism,  
8 so by definition it would be learning; and it would be nice  
9 if we had some studies to look into those elasticities.

10 MR. POZEN: Well, I think we are coming now to the  
11 end of the time for this panel. And I guess -- again, I want  
12 to make clear that we, at least, were trying to distinguish  
13 the question of materiality from how the error was corrected;  
14 and I think Greg is right to say that we thought we were  
15 proposing a very small tweak to SAB 99 on the first question.

16 But we were having an active debate on the second  
17 question about how this is best done; and I think Susan  
18 correctly raises that we were trying to actually have the  
19 idea of an 8-K with more information than is usually given.  
20 Maybe it could be done that way. So -- and our attempt here  
21 was to get out errors -- more errors -- quickly and better  
22 disclosed so that we share this. And the question is -- in  
23 our minds -- is whether a restatement is actually achieving  
24 that. We know that a restatement does provide  
25 analysts -- and I happen to be involved with a lot of

1 analysts -- with a long history, which they all like. There  
2 are costs to it; and that's what we're struggling with,  
3 whether we could encourage people to disclose more errors and  
4 disclose them more quickly and not impose the costs about how  
5 we do that. And I think the idea of having an 8-K is  
6 something we need to consider, because the last thing we want  
7 is stealth disclosures. To the contrary, our alternative is  
8 a correction that's very much out there. It may not be a full  
9 restatement, but it's out there; and it contains a lot of the  
10 quite significant information.

11 We appreciate all of the input. Obviously, we have  
12 had a panel that has a diversity of views; and we appreciate  
13 that; and I think we also got very good feedback about  
14 certain parts of the report. Perhaps we weren't as clear as  
15 we should be; and that's one of the advantages of having a  
16 progress report. So thank you again.

17 We are going to take a five-minute break  
18 here -- maybe even ten minutes. Then we'll come back at five  
19 after four with the next panel. Thank you very much.

20 (Break)

21 PANEL TWO - PROFESSIONAL JUDGMENT AND  
22 DISCUSSION OF DEVELOPED PROPOSAL 3.4

23 MR. POZEN: Well, why don't we get started. John's  
24 already been introduced, so why don't we start with Jonathan  
25 Chadwick; and just tell us -- repeat your name and your

1 affiliation.

2 MR. CHADWICK: Jonathan Chadwick with Cisco  
3 Systems. I'm the chief accounting officer.

4 MR. POZEN: Thank you.

5 MR. FLETCHALL: Randy Fletchall. I'm a partner  
6 with Ernst & Young. I'm the current-year chairman of the  
7 American Institute of CPAs; and I'm a member of the executive  
8 committee of the Center for Audit Quality.

9 MR. POZEN: Very distinguished.

10 MR. GRAZIANO: Sal Graziano, partner with Bernstein  
11 Litowitz Berger & Grossman.

12 MR. POZEN: Could you tell us, Sal, where you're  
13 located.

14 MR. GRAZIANO: I am located in New York City.

15 MR. POZEN: Thank you.

16 MR. JOHNSON: My name is Dennis Johnson. I'm the  
17 head of global corporate governance for CalPERS.

18 MR. POZEN: Thank you.

19 John.

20 MR. HUBER: I'm still John Huber from Latham &  
21 Watkins.

22 MR. POZEN: I'm glad there's been no magical  
23 transformation in the last ten minutes.

24 MR. RICHARDSON: Scott Richardson from Barclay's  
25 Global Investors. I'm the global head of credit research;

1 and I serve on our firm's proxy committee.

2 MR. POZEN: Thank you.

3 MR. TAUB: Scott Taub, managing director with  
4 Financial Reporting Advisors. We provide consulting services  
5 to public and private companies on financial reporting  
6 matters.

7 MR. POZEN: Thank you very much.

8 I think most of you who have been here probably  
9 know who the committee members are, so I'm not going to go  
10 through that. But we, first of all, appreciate your taking  
11 the time, especially people who have traveled far to come  
12 here and to share your views with us.

13 Those of you who have submitted testimony, we do have  
14 the testimony and people have read it in advance. We  
15 are -- the objective here is to have some short  
16 statements -- five-minute statements -- and then to have an  
17 active discussion. As I think you heard from the prior  
18 panel, we put out an interim or progress report in order to  
19 get feedback. We surely have been getting feedback.  
20 Sometimes we not have communicated as clearly as we should  
21 have. Other times people may have misunderstood what we  
22 wanted to do. So the attempt here is to really have, after  
23 the opening statements, to have a real open dialogue in which  
24 we can learn from you; and, hopefully, you can give us  
25 feedback that will be useful in writing a final report, which

1 is due at the beginning of August.

2           So we will continue our methodology of starting  
3 from the backwards alphabet. And, you know, Scott, I've read  
4 a number of your columns. Very glad to meet you. Maybe next  
5 time you'll be a little kinder to me in some of those  
6 columns. Oh, sorry. There are some disadvantages with  
7 having your name associated with the committee.

8           MR. TAUB: I think I may need to withdraw the  
9 comments I already submitted.

10           Well, thank you for the invitation to be here  
11 today. As most of you know, I spent four and a half years  
12 at the SEC as deputy chief accountant and acting chief  
13 accountant part of that time. None of the issues I addressed  
14 at the SEC bothered me as much as trying to find a way to get  
15 more professional judgment into financial reports than I  
16 perceived to be there. I met preparers that had made  
17 deliberate decisions to avoid using judgment because of the  
18 fear of being second-guessed. They actually said, I refuse.  
19 I will not use judgment. I encountered auditors who were  
20 uncomfortable with treatments that were different from the  
21 ones they thought were safe, even if they thought the other  
22 treatments provided better accounting. And I encountered  
23 regulators that thought only one interpretation could be  
24 acceptable, even where I could see several.

25           It's not unusual these days for accountants to

1 proceed as if our jobs are to comply with the written  
2 literature -- no more and no less. Knowledge and expertise  
3 is sometimes applied only insofar as considering whether the  
4 literature specifically allows or specifically prohibits a  
5 particular treatment.

6 Other times the term "professional judgment" is  
7 wielded as a weapon. It suggested, absent a specific  
8 prohibition, any practitioner's conclusion that a treatment  
9 is acceptable must, by default, be considered a reasonable  
10 application of judgment. These kinds of mindsets just helped  
11 to foster accounting-motivated transactions and complexity in  
12 accounting due to an ever-increasing need for interpretive  
13 guidance.

14 The progress report issued by the advisory  
15 committee seems to suggest that the framework would enable  
16 more use of judgment because of some combination of the  
17 following three things: One, the framework would improve the  
18 quality of judgments by reminding preparers and auditors of  
19 things to consider in dealing with the interpretive issues,  
20 thereby resulting in more knowledgeable conclusions; two,  
21 regulators are already willing to accept reasonable judgments  
22 but preparers and auditors do not believe this to be the case  
23 and the endorsement of the framework by the SEC and PCAOB  
24 would give preparers and auditors something tangible to point  
25 to so that they will feel comfortable in applying judgment;

1 and, three, perhaps endorsement of a framework like the one  
2 in the proposal will cause regulators to be more accepting of  
3 good professional judgments than they are today.

4           Now, I agree that endorsement of a framework like  
5 this could conceivably close some of the gaps between what  
6 preparers and regulators believe is reasonable. I do think  
7 the SEC staff already tries to accept good-faith judgments  
8 and so I don't think that implementation of the framework  
9 would actually result in the SEC accepting a lot of  
10 conclusions that it wouldn't have otherwise accepted as being  
11 reasonable.

12           Now, some might suggest that means the adoption of  
13 the framework is unnecessary; however, it might also suggest  
14 that adoption of the framework won't impede the SEC's work.  
15 And it is clear to me that preparers and auditors fear being  
16 second-guessed and that fear is affecting their actions in  
17 ways that are not healthy for the capital markets. If  
18 adopting the framework would ease these concerns because the  
19 SEC will formally be on record with respect to the use of  
20 judgment, then perhaps it is a beneficial thing to do.

21           The progress report does make clear that following  
22 the framework would not insulate an accounting judgment from  
23 being deemed an error. This is important, because having  
24 good faith doesn't mean you don't wind up making a mistake.  
25 The progress report does contemplate, I believe, that a

1 company that followed the framework would not be deemed to  
2 have committed a securities-law violation, even if the  
3 accounting were found to be in error. This seems to make  
4 sense to me as well. I don't think the SEC enforcement staff  
5 ought to be spending a lot of time going after people that  
6 tried to do it right, used reasonable diligence, and just  
7 made a mistake. On the other hand, there is a risk, as the  
8 progress report notes, that a framework like this one could  
9 get treated like a rule. In that situation, it could become  
10 a burden to preparers who already thought they were doing a  
11 good job applying judgment. Worse, it could lead to a  
12 situation where any judgment that didn't incorporate all of the  
13 suggested steps is presumed to be inadequate and an  
14 indication of poor faith. Although there's nothing in the  
15 recommendation that actually suggests that this should  
16 happen, I have seen similar things happen before; and so I do  
17 understand where the concerns come from.

18 Others have raised the concern at the opposite end  
19 of the spectrum -- that the framework could be used by  
20 companies intent on a deception to escape the consequences of  
21 their actions. I have no doubt that if this framework were  
22 implemented, somebody would try to do just that. It happens  
23 every time. But in my experience I think it's better to  
24 allow policy-makers to set the rules they believe are best  
25 and leave handling the abusers to the enforcement function,

1 rather than simply refusing to put out the rule for fear that  
2 somebody might violate it.

3           Further, I would like to suggest that concerns  
4 about the framework becoming a de facto rule and about  
5 potentially inappropriately protecting those intent on  
6 deception would both be reduced if the framework were adopted  
7 as a working policy of the SEC rather than as a legal safe  
8 harbor. Letting the SEC use it as a working policy means  
9 that the judgment about who deserves the benefits of a  
10 framework and what the consequences are of having used or not  
11 used it would be made by SEC staff, who generally have  
12 expertise in financial reporting matters, rather than by  
13 lawyers, judges, and juries, who may not.

14           In the end I think CIFIIR ought to be commended for  
15 trying to address this issue. I tried for four and a half  
16 years. You've made more progress than I have already. If I  
17 had to vote --

18           MR. POZEN: But you were doing other things.

19           MR. TAUB: If I had to vote now, I would be trying  
20 to give the framework a try as an SEC working policy, because  
21 I'm not satisfied with the way things are working now. And  
22 this proposal does represent a real attempt at improvement.  
23 But I would point out that it's only going to work if the  
24 various participants in the financial reporting process  
25 believe it will work. The success of this proposal is

1 directly tied to whether preparers, auditors, investors, and  
2 regulators believe in it. So I will be very interested to  
3 see how the comments come out on this, because if we wind up  
4 in a situation where a significant part of the market thinks  
5 that this proposal will fail or that it is done in bad faith,  
6 then it's not going to work. And although I'm a proponent of  
7 trying to do something because I don't like the way things are  
8 now, pushing a solution that parties don't believe in is  
9 probably not worth our efforts.

10 Thank you.

11 MR. POZEN: Thank you, Scott.

12 We have another Scott, Scott Richardson.

13 MR. RICHARDSON: Thank you. I think my comments  
14 will be a little briefer. I think I'm the only investor  
15 representative here.

16 MR. POZEN: I don't think that's true. Dennis is  
17 representing a little pension fund. Like they said at  
18 Dartmouth College, it's a small college, but there are those  
19 who love it.

20 MR. RICHARDSON: Good point.

21 So I'll give a little perspective on BGI, the size  
22 of the operation, distinguish the active business from the  
23 indexing business, and then place the financial reporting  
24 system or the information that comes out of that in some  
25 director-investor context. And then I'll make my comments

1 around the professional judgment, with that background.

2           Currently, BGI has roughly \$2.1 trillion under  
3 management. About 450 billion of that is actively managed.  
4 That spans a lot of different asset classes. The lion's share  
5 of that is in equity. There's -- we have probably 60, 70  
6 billion active in fixed income. That's my primary  
7 responsibility. A lot of that has to do with corporate  
8 credit. So my background is going to speak to both the  
9 equity and the creditor use of this information, so it's a  
10 broader stakeholder perspective.

11           MR. POZEN: Someone on the committee knows a little  
12 about credit, Greg.

13           MR. RICHARDSON: Greg may know a little. We may  
14 use rating information once in a while in our investment  
15 decision. So, lastly, the financial information, again, is  
16 very central to that.

17           Some examples of how we would use this information  
18 in an active business is building out return forecasts, so  
19 it's a central component to shaping our view of good  
20 companies from bad companies from an expected-return  
21 perspective. We use this information to build risk models.  
22 We have an extensive arm of the firm tailoring, tweaking risk  
23 models specifically to different portfolio objectives.  
24 Likewise, to transaction-cost models. Those three  
25 ingredients together -- and that will determine the shape of

1 a given portfolio.

2           Now, we also have an extensive proxy voting  
3 perspective. This is where Dennis could shed some more  
4 light. We find the financial reporting information central  
5 to a lot of our proxy voting issues. I think the restatement  
6 discussion you heard earlier would have touched on this.  
7 We've built out recently a very quantified way to rank firms  
8 on the basis of perceived restatement risks and that can help  
9 guide our voting decisions.

10           A general comment: With that active investor  
11 background, uncertainty is central in everything that we do.  
12 It's a fact of life. If I told you the degree of precision  
13 that we have in forecasting returns, you'd be shocked. It's  
14 around 1 percent. If you'd ask where is the summary  
15 statistic of our skill, that's pretty low. That means 99  
16 percent of the stuff -- the realized variation of returns we  
17 can't explain. Okay. But with 1 percent, that's a very  
18 attractive business model. Okay. So we're working in an  
19 inherently uncertain business environment. It's a fact of  
20 life. We accept that. So I'm viewing professional judgment  
21 from that perspective. It's a fact of life.

22           When we use that information, I very much like the  
23 idea of substance over form. Going away from a rules-based  
24 mentality to something more principles-based is a very good  
25 thing that will capture the truth of the underlying economic

1 reality better. Does that introduce additional flexibility  
2 into the system? Yes. Scott touched on that. Will managers  
3 occasionally abuse that discretion? Of course. As an  
4 investor, I think an easy way around that is to expand the  
5 disclosure regime. So if you give to the users of the  
6 financial statement the choice of information, from which one  
7 realization of one outcome came from, that allows the user to  
8 reverse-engineer those financial statements. It means  
9 currently we get point estimates for all the line items in  
10 the income statements and balance sheets. I think it would  
11 be very useful to expand that to include second-moment  
12 disclosures, so how reliable, how certain are you to expect  
13 that information? That will summarize a lot of the  
14 professional judgment aspect. So if there's  
15 uncertainty -- and that's a concern that a preparer and an  
16 auditor has -- they can convey that information through such  
17 second-moment disclosures. So I think substance over  
18 form -- critical. A way to address that, get people  
19 comfortable, is to expand the disclosure base of the  
20 financial reporting system.

21 MR. POZEN: Thank you. John.

22 MR. HUBER: Thank you for the opportunity to speak  
23 on professional judgment. I view professional judgment as  
24 the analogue to the other recommendations that the first  
25 panel talked about. And I've got a footnote to that

1 discussion at the end of my remarks.

2           But to focus on professional judgment, I'd like to  
3 echo a theme from Scott Taub with respect to the idea of the  
4 psychology that we are working under in the current  
5 environment. And that psychology is really one in which a  
6 lot of people and a lot of companies are concerned about  
7 making a mistake about, in essence, sticking their head out  
8 of the shell and actually taking the risk that they sometimes  
9 believe that a restatement, even a restatement for an  
10 immaterial amount, is something that they can't be criticized  
11 for. Now, the difficulty with respect to that sort of  
12 approach is often that the restatement results in the stock  
13 drop; results in problems; and that, quite frankly, doesn't  
14 help investors either. The other side of that coin are  
15 people that will say, "Show me where it's written that I have  
16 to do this. Show me where it's written that we have to do  
17 the restatement." And the fact of the matter is, that sort of  
18 mentality is not necessarily one that you would embrace from  
19 an investor-protection standpoint.

20           There was a commission. It was not a committee.  
21 It was the Treadway Commission. Jim Treadway came out with a  
22 list of principles that I commend to the committee's  
23 attention, because they're equally applicable now. The best  
24 one was tone at the top. And the idea of tone, the idea of a  
25 framework and its relationship to tone is the psychological

1 point that I would commend to the committee's attention.  
2 We're all wrapped up with respect to qualitative,  
3 quantitative, complexity -- that sort of thing. But at  
4 bottom this is about people. And the fact of the matter is  
5 right now a lot of people are afraid with respect to making  
6 decisions. And I agree with Scott. This isn't going to  
7 change the attitude of the Division of Corporation  
8 Finance. Their view with respect to how to review these  
9 things will not change.

10 But I respectfully submit it can change the  
11 attitude of a lot of people to show them that there is a  
12 framework. It's not a rule; and I really don't believe it  
13 should be a safe harbor in any way, shape, or form. And it's  
14 probably going to be used by companies that already go  
15 through the process in the same way; and it may be abused by  
16 some. But my point is it's time to do something like this,  
17 because a lot of people are just looking for the kind of  
18 guidance that a framework can give.

19 And, with that, I'd like to go back to a point that  
20 was made in the first panel, because the point that was made  
21 in the first panel was that financial statements that are not  
22 restated cannot be comparable, cannot be shown on a  
23 consistent basis. I wanted to disagree at the time, but,  
24 quite frankly, we didn't have time.

25 My point is footnotes to financial statements can

1 indeed set forth what that number would look like. You can  
2 have that under generally accepted accounting principles  
3 today with respect to that sort of a point. The narrative  
4 disclosure and the filing does the same thing. So my point  
5 is comparability and consistent application and consistent  
6 presentation is a false issue with respect to the proposals  
7 that the committee is looking at.

8 And so, with that, I turn it over to the chairman.

9 MR. POZEN: Thank you, John.

10 Dennis Johnson, CalPERS.

11 MR. JOHNSON: Mr. Chairman, members of the  
12 committee, I'm pleased to be here today to represent CalPERS  
13 in the discussions before you on the progress report of the  
14 SEC advisory committee on improvements to  
15 financial reporting. Thank you for your work on improving  
16 financial reporting, as we believe the advisory committee's  
17 work is timely and critical to all investors.

18 CalPERS is the fourth-largest retirement system in  
19 the world and the largest public pension system in the United  
20 States, managing approximately 240 billion in assets.  
21 CalPERS manages pension and health benefits for approximately  
22 1.5 million California public employees, retirees, and their  
23 families. The work of CIFiR is important to CalPERS and our  
24 members. CalPERS has a significant financial interest in the  
25 integrity of financial reporting.

1           Many of you have had a chance to read CalPERS'  
2 written testimony. I would like to briefly comment on two  
3 topics: investor needs and professional judgment.

4           There are five investor needs that I would like to  
5 address. First, materiality should be evaluated not only  
6 from a reasonable current investor's perspective, but from  
7 the perspective of all investors. Second, we do not believe  
8 that the proposed sliding scale for evaluating errors  
9 protects the interests of all investors. Third, companies  
10 should disclose their bases for materiality, how they assess  
11 materiality and the amount of uncorrected errors of each  
12 reporting period. Fourth, when an error is corrected,  
13 financial statements from all periods should be corrected for  
14 comparability and not aggregated and flushed through the  
15 current period. Fifth, financial statement disclosure should  
16 be done in a manner consistent with recommendations made on  
17 December 13th, 2007, by the Investors' Technical Advisory  
18 Committee of the Financial Accounting Standards Board.

19           There are four points that I would like to make on  
20 professional judgment. First, professional judgment will be  
21 strengthened by more complete documentation practices,  
22 greater availability of relevant information, and better  
23 communication between management, directors, and external  
24 auditors. Second, investor input is required during the  
25 establishment of a useful framework to improve the

1 application of professional judgment. Third, the Financial  
2 Accounting Standards Board must also be involved in the  
3 development of a framework to guide the use of professional  
4 judgment. Fourth, safe harbors should not be made available to  
5 accountants and auditors. We do not have any evidence that the  
6 granting of such provisions protects investors, improves  
7 one's accuracy when applying judgment, improves the quality  
8 of management decision-making, or improves the quality of the  
9 audit.

10 Thank you for inviting me to share CalPERS' views  
11 with you today.

12 MR. POZEN: Thank you for that very crisp  
13 presentation.

14 Salvatore Graziano, please.

15 MR. GRAZIANO: Thank you for having me here this  
16 afternoon as well. I noticed that I submitted one of the  
17 longer written presentations, so I will now make one of the  
18 shorter oral presentations.

19 MR. POZEN: We very much appreciate that.

20 MR. GRAZIANO: I am a partner at a 50-lawyer law firm  
21 that represents public pension funds primarily in securities  
22 litigation. I've personally litigated securities fraud  
23 cases, including accounting fraud cases against both issuers  
24 and accountants, so I'm often involved in situations where  
25 things have gone wrong; and I think that is an important

1 perspective for this committee to consider what the effects  
2 of these proposals will have in the situations that have gone  
3 wrong, both in terms of enforcement and civil litigation.  
4 I've seen firsthand how difficult these cases already are to  
5 prosecute against both issuers and accountants. I am  
6 concerned that Proposal 3.4 will further raise this bar to a  
7 level that will be quite difficult to meet, even in the most  
8 meritorious cases. I hope that my views today will be helpful  
9 to the committee with this perspective in mind.

10           Again, my submission in writing was quite long. I  
11 just wanted to give you a brief summary of it, which is that  
12 Proposal 3.4 is bad for investors because it would make  
13 pursuit of fraudulent accounting by regulators and civil  
14 litigants even more difficult than it already is, thereby  
15 making accountants less accountable. It will make it more  
16 difficult for competent, honest auditors to challenge  
17 management's "judgment," thereby encouraging  
18 fraudulent accounting; and it will reduce the transparency,  
19 comparability, and uniformity of financial statements while  
20 increasing their complexity, therefore further harming  
21 investors. Ultimately, I believe this will result in more  
22 scandals of the kind that plagued in the first half of this  
23 decade; and the beneficiaries in the short run will be  
24 dishonest managers and compliant auditors.

25           One brief additional comment on safe harbors: I

1 think you'll hear now the third time in a row that safe  
2 harbors should not be endorsed. I did notice that this  
3 committee has not specifically proposed or endorsed safe  
4 harbor, but I can't stress how important it is to discourage  
5 any safe harbor in this situation.

6 Thank you.

7 MR. POZEN: We have definitely gotten the message  
8 on safe harbors. We thought we had been clear, but obviously  
9 in this area one can't be clear enough.

10 Randy?

11 MR. FLETCHALL: Thank you for the opportunity to  
12 testify today. I applaud the SEC and the committee for their  
13 excellent work on improved financial reporting. In  
14 particular, the committee's progress report contains a number  
15 of proposals that, if adopted, could help improve the quality  
16 of the U.S. financial system and ultimately strengthen the  
17 U.S. capital markets.

18 I am involved with various organizations, so I  
19 should say at the outset the comments that I make  
20 today -- the views are my own.

21 Today I wish to emphasize the committee's  
22 endorsement of a professional judgment framework is  
23 particularly significant and necessary. The committee  
24 proposes a framework for SEC adoption that strikes a proper  
25 balance of providing clarity and protection to preparers and

1 auditors without giving anyone a free pass to rely on  
2 unreasonable exercise of judgment. The committee  
3 successfully identified the necessary components of a  
4 professional-judgment framework and that established  
5 adjustments should be exercised and evaluated. Among other  
6 things, the framework requires contemporaneous documentation  
7 of the alternatives considered and the conclusions reached  
8 and provides elements of professional judgment that are based  
9 on a critical and reasoned evaluation and made in good faith.  
10 As recognized by the committee, clarity with regard to how  
11 professional judgment should be exercised and evaluated will  
12 become increasingly important as the U.S. shifts to a more  
13 principles-based accounting standards which rely to an even  
14 greater extent on professional judgment.

15           The committee's proposed framework will provide a  
16 number of benefits to investors by enhancing the structure  
17 and discipline surrounding the decision-making process. The  
18 framework will increase the likelihood that the process used  
19 by preparers and auditors will consistently be robust,  
20 objective, and appropriately documented. This will help  
21 increase the quality and consistency of the judgments relied  
22 on by investors. The framework will remind the investment  
23 community that judgments are an inherent part of preparing  
24 financial reports and auditing them. And the financial  
25 statements and audit reports should be read with that in

1 mind; and the framework will reduce a number of unnecessary  
2 restatements allowing investors to focus on a smaller number  
3 of truly important restatements in their decision making.

4           Now, I understand that some have questioned the  
5 need for a professional-judgment framework providing specific  
6 examples to prove the need is very difficult, both because of  
7 client confidentiality issues and because we could easily end  
8 up arguing over any given example, whether it's on one side of  
9 the line or the other. But I wish to strongly emphasize for  
10 the committee that the numbers do speak for themselves.

11           Between 1997 and 2005, the number of restatements  
12 per year increased five-fold. In 2006 alone nearly 1,500  
13 restatements of financial statements occurred. In addition,  
14 I can assure the committee that in my own personal judgment  
15 from my own experience and discussions with others, there is  
16 indeed a problem with reasonable good-faith decisions by  
17 preparers and auditors not always being respected but instead  
18 being overturned by regulators, a problem that requires a  
19 strong response. The problem is real; and the committee is  
20 on the right track to fix it.

21           I recommend that the committee's proposed framework  
22 be clarified in only two ways. First, the committee should  
23 make it very clear that there's no suggestion that financial  
24 statements of preparers need protection from a review and  
25 analysis by their independent auditors. The appropriate

1 relationship between preparers and auditors should include a  
2 robust exchange of views, particularly at the time accounting  
3 and reporting decisions initially are being made. Within the  
4 context of that relationship there's simply not the kind of  
5 concerns as when preparers and auditors are dealing after the  
6 fact with government regulators. The committee should not  
7 want to interpose itself into the auditor/client  
8 relationship, which is already governed by substantial  
9 professional literature, or in any manner weaken the role of  
10 an independent, objective audit, a role that's very essential  
11 to investors in the markets.

12 I note that the committee has inserted a footnote  
13 in its progress report to address this issue. I would only  
14 suggest that the committee go further by carefully and  
15 consistently removing from the text any suggestion that the  
16 professional-judgment framework approximate financial  
17 statement preparers from their auditors. It's important the  
18 framework not alter that important relationship between  
19 issuers, including management and audit committees, and  
20 auditors. In fact, I would encourage the committee to  
21 consider adding some commentary that emphasizes and fosters  
22 the effectiveness of those relationships.

23 Second, the committee should consider requiring  
24 enhanced disclosures within the element of its framework. As  
25 recognized in the committee's report, the current proposed

1 framework does not necessarily establish professional or  
2 new disclosure requirements from those already required by  
3 the SEC. I believe that the SEC should consider additional  
4 disclosures than those currently required in order to fall  
5 within the framework. The increased transparency of  
6 important financial reporting decisions will provide another  
7 significant benefit to investors in addition to those that I  
8 mentioned earlier.

9           Finally, I want to comment on the form of the  
10 framework. The committee's progress report, as has been  
11 noted here, recommends that the commission implement a  
12 professional judgment framework and leaves resolution of the  
13 form to the commission either by a rule or by a policy  
14 statement. A rule, which is more formal, has advantages over  
15 a policy statement. A rule provides greater stability and  
16 consistency in regulator conduct. It is because a rule  
17 carries with it the full force of law and is more likely to  
18 be consistently accepted by the regulatory staff, as  
19 definitive statements of how issues should be handled rather  
20 than policy preferences that can be changed or minimized. My  
21 belief is that the commission should impose a rule, as a rule  
22 can be much more effective in establishing a  
23 professional judgment framework that produces the desired  
24 behavioral changes. However, a strong and clear commission  
25 policy statement establishing a framework perhaps would go a

1 long way to producing the same desired change. It would  
2 clearly be my second choice.

3 In summary, creating a professional judgment  
4 framework will help create an environment where good-faith  
5 professional judgment receives appropriate respect. The  
6 framework would also decrease the number of restatements in  
7 the United States that result from differences in judgment,  
8 differences that are reached in hindsight, and differences  
9 that too often reflect regulators' preferences for how  
10 certain items should be handled when there is more than one  
11 right answer that actually exists. These restatements strike  
12 doubts in investors regarding the quality and accuracy of  
13 U.S. financial reports. Everybody's been working diligently  
14 over the past several years to remove such doubts and restore  
15 investor confidence. Reducing the number of unnecessary  
16 restatements will further increase investor confidence in our  
17 financial reporting system and thereby our market's financial  
18 health and stability.

19 MR. POZEN: I just want to say, Randy, that  
20 footnote was, you know, does represent the committee view and  
21 if you -- if there were -- if you would take the time to  
22 write us a letter or an e-mail in which if there were other  
23 sentences in the report that were problematic, they weren't  
24 intentional. So we didn't mean to disturb that relationship  
25 and anything you can be specific on in terms of giving us

1 guidance or words would be helpful.

2 MR. FLETCHALL: Chairman, thank you very much for  
3 that. And we will, in the comment letters of each of the  
4 organizations I'm involved with, try to help deal with that.

5 MR. POZEN: As I say, since we are in agreement  
6 with the principle, the more specific -- we don't need a  
7 general -- you don't have to convince us of the point. We  
8 want to know if there are sentences that are bothersome.  
9 We'd like to know them.

10 Jonathan.

11 MR. CHADWICK: I felt like being controversial and  
12 actually weighing in for safe harbor, but I don't think I  
13 will. (laughter) That's the only issue on the table here.

14 So good afternoon. I am Jonathan Chadwick. I'm  
15 senior vice president and corporate controller at Cisco  
16 Systems. I'm the principal accounting officer. I'm also a  
17 member of Financial Executives Institute, FEI -- their  
18 committee on corporate reporting -- although the views  
19 expressed today are really my own and not necessarily those  
20 of FEI.

21 So, in general, we are very supportive of the work  
22 you're doing and the SEC advisory committee on improvements  
23 in corporate reporting and its ongoing objectives to reduce  
24 complexity.

25 The focus on the end-user of the financial

1 statements should be particularly beneficial; and we encourage  
2 the committee to continue to use this orientation as a very  
3 critical lens regarding the benefit of the proposed changes.  
4 Ensuring that financial statements have indeed become more  
5 understandable and useful should be considered a key acid  
6 test for the success of this important effort.

7           So in your view the judgment framework not only is  
8 aligned to a principles-based standards approach but is in  
9 itself a principles-based approach to the methodology of good  
10 decision making. We should view the framework as the set of  
11 concepts and principles that define a reasonable person's  
12 approach to the application of judgment. We should not let  
13 it denigrate into a check-the-box formality; and we would be  
14 very much opposed to a codification of a set of rules for the  
15 judgment-making process. Its use should extend into the  
16 basic building blocks of both preparers and auditors and  
17 become an inherent aspect of the training of accounting  
18 professionals. We believe that embedding the concepts from  
19 the framework into accounting degrees, the CPA exam, and into  
20 ongoing training and development will bring positive impacts  
21 beyond the judgments themselves and will eventually improve  
22 the effectiveness of our financial reporting. Maintaining  
23 the spirit of what is intended is going to be key.

24           Among the potential elements of the thought process  
25 mentioned in the progress report are analysis of the

1 transaction, review and analysis of the relevant literature,  
2 alternative views or estimates, consistency of application to  
3 similar transactions, and the appropriateness and reliability  
4 of the assumptions and data used.

5 I feel it's really important to note that in  
6 today's world, good companies are already following this type  
7 of framework. For example, when an emerging accounting topic  
8 arises, most companies are already going through an  
9 exhaustive effort to support their conclusions. Typically,  
10 the analysis starts with gaining an understanding of the  
11 business purpose and the accounting guidance. Companies are  
12 also analyzing differing viewpoints, of which I note there  
13 can be many and often writing white papers to support their  
14 conclusions. The documentation that is prepared to support a  
15 company's accounting position is generally discussed with  
16 their auditors and their audit committees and on the size of  
17 the topic we're talking about.

18 And I would suggest that while these steps may be  
19 considered best practices, they are, in fact, necessary  
20 practices in today's complex environment; and it is perhaps  
21 disappointing to note that the committee believes that such a  
22 fundamental framework does, in fact, need to be adopted in  
23 whatever form, but we do believe that it will be especially  
24 important as we learn how to operate within a more  
25 principles-based standards environment, for example, under

1 IFRS.

2           Users of the framework for accounting judgments  
3 will be both financial statement preparers and auditors.  
4 Application of the framework should ultimately be inherent in  
5 both groups but may require a change in mind-set in going  
6 from a checklist mentality to one of judgment and principles.  
7 And while today's accounting in the United States is more rules  
8 based, we do anticipate movements towards a more  
9 principles-based approach with less specific guidance. This  
10 change of thought process will need to be supported by  
11 regulators in not second-guessing reasonable conclusions and  
12 creating mistrust. We believe that this framework for  
13 decision-making can aid in preparation for this mind-shift  
14 change. And as such, the SEC advisory committee recognizes  
15 that the framework would affirm that reasonable professional  
16 judgments can differ and that differences do not suggest that  
17 one judgment is necessarily wrong and the other correct.

18           Now, in terms of documentations and disclosures,  
19 however, we should be careful that the application of the  
20 proposed framework does not create any additional  
21 documentation requirements per se, but that appropriate  
22 contemporaneous record-keeping should be a natural outcome of  
23 its use. It is the substance of the decision-making process  
24 that we seek to improve and not simply the form.

25           The level and type of documentation may vary,

1 depending on the size and nature of the transaction and other  
2 relevant factors. And, similarly, transparent disclosure of  
3 significant accounting judgments should be a natural outcome  
4 of the application of the framework, but, again, we believe  
5 we should be careful not to prescribe exact form and leave it  
6 to the judgment approach.

7           And as an example, we understand that there is no  
8 similar codified set of rules in the IFRS world, but we do  
9 observe that companies adopting IFRS are generally providing  
10 greater levels of explanation and disclosure regarding their  
11 accounting policies in the principles-based standard  
12 environments.

13           So, in summary, we are supportive of the broad  
14 efforts of the committee, including the progress report. A  
15 significant amount of progress has been made in a relatively  
16 short period of time. The judgment framework is a key  
17 outcome of these efforts. It is designed at the appropriate  
18 principles level and is, in fact, consistent with the  
19 practices at most companies today. As regulators, preparers,  
20 and auditors, we will all need to ensure that we do not have  
21 the unintended consequence of codifying it and denigrating it  
22 into yet another element of check-the-box compliance. There  
23 should be good natural outcomes with respect to compliance,  
24 documentation, and disclosures. And we need to collectively  
25 remove the aura of mistrust that may exist as a basis for

1 introducing the judgment framework. And, as I promised, we  
2 should not view it as a safe harbor except perhaps in the  
3 sense that reasonable, good-faith judgments made by preparers  
4 and auditors in accounting and financial reporting matters  
5 should be respected by regulators.

6           The judgment framework should be viewed as just  
7 sound, good business practice; and we should ensure that the  
8 principles and concepts are embedded in our respective  
9 organizations, especially as we contemplate this significant  
10 shift to IFRS over the coming years.

11           Thank you.

12           MR. POZEN: Thank you very much.

13           I think let's -- Greg, did you want to open the  
14 bid?

15           MR. JONAS: This is a question for Mr. Graziano.  
16 And let me preface this by saying you have surely forgotten  
17 far more than I will ever know about civil fraud litigation,  
18 so it is with great modesty that I ask this question.

19           But I could see that if what we were proposing was  
20 a process, meaning telling people what to do or a checklist,  
21 meaning when you're done with it, you're complete. I could  
22 see that if that's what we did, it could constrain  
23 second-guessing, could constrain civil litigation. What I  
24 don't understand and am wondering what I'm missing is what I  
25 perceive we're proposing is nothing more or less than saying

1 as a literature in auditing and accounting has said in many  
2 places, "Hey, here's twelve things to think about." So in my  
3 experience when you say there's twelve things to think about  
4 and I would argue that maybe at least four of those are  
5 things today that people don't often think about, that first  
6 that does not constrain any second-guessing. If anything, it  
7 gives those who wish to shoot at quality judgments more to  
8 shoot at. I don't see how that constrains. Can you help me  
9 out with your view that you somehow get shut down here if we  
10 propose this twelve-element framework?

11 MR. GRAZIANO: Okay. Well, first I'm looking at  
12 the nine elements on page 69 of the report, so I'll use those  
13 for my comments. And just taking a step back, generally the  
14 importance of rules to me and what I do cannot be  
15 understated. I have one example that's slightly off, but I  
16 think important for the committee to think about; and then I  
17 will go through with what I would do if I were forced with  
18 these nine sets of criteria, how I would analyze them. But,  
19 first, the importance of rules.

20 When Sarbanes-Oxley passed, one relatively  
21 unnoticed change was that options had to be reported within  
22 two days of being granted. That was not a major development,  
23 but what it caused, because you had now a firm two-day rule,  
24 was a revelation of over a hundred public companies  
25 previously backdating stock-option grants. So rules matter

1 and rules are very helpful. But let's talk about what I would  
2 do if I were forced to live within this framework. I think  
3 the key to me is that judgments have to be documented  
4 contemporaneously, that the documentation has to be detailed  
5 and disciplined, that -- what I fear most is a checklist  
6 approach with vaguely drafted documentation with as-of dating  
7 that will later be used as very powerful defense, because in  
8 our cases what matters is proof of scienter, proof of knowing  
9 or reckless behavior on the part of the internal and external  
10 accountants. If the accountants are able to say, I went  
11 through the nine items on page 69 of the report and I have this  
12 one-page summary of what I did, therefore I used my judgment,  
13 that will absolutely be a defense in civil litigation. The  
14 lack of restatements that has often been talked about today,  
15 which is reducing the amount of restatements per se -- the  
16 lack of restatement is a powerful defense in civil  
17 litigation. So this earlier panel, when we talked about what  
18 would change if we had more disclosure, less restatements,  
19 how would investors be harmed?

20           One more item I'd like to put on the table on that  
21 consideration is that I can assure you if there are less  
22 restatements but nonetheless just as material what you will  
23 see before the regulators in the courts we didn't restate, we  
24 used our judgment, we are not liable.

25           So those are my concerns, generally speaking.

1           MR. POZEN: I read your testimony; and I had a  
2 number of specific questions.

3           And, first of all, your observation about stocks  
4 and options, I don't know whether it's true, because I think  
5 the options backdating was revealed by a set of statistical  
6 studies done actually in the years before 2002. And it was  
7 done by an academic group that showed that there was a high  
8 probability so that this -- I think most of the options  
9 backdating occurred before Sox, so I mean --

10          MR. GRAZIANO: Can I respond to that?

11          MR. POZEN: Yes.

12          MR. GRAZIANO: Okay. Actually, you know, I worked  
13 with those professors quite extensively in a number of civil  
14 cases; and what they needed, what they were missing from  
15 their research was what happened after Sox. That gave them  
16 the powerful evidence they did not have. Yes, the patterns  
17 were very suspicious before Sarbanes-Oxley, but the fact that  
18 inside corporate managers could no longer time their grants  
19 as well when they had to report it within two days of  
20 receiving a stock-option grant is what gave them the ability  
21 to reach their final conclusion that, in fact, backdating was  
22 occurring.

23          MR. POZEN: I agree that once you had a two-day  
24 rule they couldn't backdate, but I actually still disagree  
25 that that actually produced the result. I also in my spare

1 time happen to be a professor.

2           But the second thing is I read your testimony to  
3 say actually more that -- a second point is that you say that  
4 the WorldCom perpetrators capitalized line cost when the  
5 rules clearly forbid doing so. I don't understand -- I agree  
6 in WorldCom they chose to capitalize line cost rather than  
7 expense them. And so that surely wouldn't be defensible  
8 under any accounting judgment framework because it directly  
9 violates the rules. So I'm having a hard time understanding  
10 how a judgment -- how that case would in any way be impacted  
11 by the judgment framework.

12           MR. GRAZIANO: Clearly I think the point about  
13 WorldCom is actually slightly different. The point there is  
14 even in the face of rigid rules, there are abuses. The  
15 concern then is if the rules are less rigid, become a much  
16 more judgment or principles-oriented, you will see more  
17 rather than less violation. That is the point of the  
18 WorldCom example.

19           MR. POZEN: Well, then I guess the third point  
20 is -- that's what I get out of your testimony in general is  
21 that it's not so much the accounting framework. Your main  
22 concern is you don't like the move toward principles and away  
23 from specific rules; and I think it's a legitimate debate.  
24 But to the extent that the world is going that way, quite  
25 frankly, neither you nor I will have a lot of control over

1 that. But I think that seems to be the nub of your concerns,  
2 but -- as opposed to the accounting framework.

3 MR. GRAZIANO: I recognize that is a freight train  
4 I may not be able to stop. I do acknowledge that. And where I  
5 go from that is looking at page 69, for example, the nine  
6 components of exercising judgments. I don't see enough teeth  
7 there, to be frank with you. I don't see any requirement to  
8 detail the exercise of judgment contemporaneously in a  
9 detailed, documented way. I am concerned --

10 MR. POZEN: Do you -- I guess maybe we weren't  
11 clear, but I thought we said you had to not only explain your  
12 choice but you had to document it contemporaneously. I think  
13 that is part of our --

14 MR. GRAZIANO: I understand that, but I don't see  
15 the teeth behind that. I don't -- if I looked at this page  
16 and I was an auditor I wouldn't really know how much I had to  
17 put on that work paper at the time, as opposed to what I  
18 would do today.

19 MR. JONAS: Guilty as charged. It is not that  
20 level of detail that turns this into a rule, agreed; except  
21 today there is none. Wouldn't you argue that the twelve  
22 items we've listed is better than the zero items that exist  
23 today? And, if not, why?

24 MR. GRAZIANO: Yeah. I don't think I agree that  
25 today there is none. I think the auditing standards do

1 require a contemporaneous documentation, but what I would do  
2 is urge this committee to see if it could perhaps put more  
3 teeth into this page and into this proposal in general so  
4 that, you know, it actually becomes a very helpful guide to  
5 an outside auditor who is now confronting an inside company  
6 manager and saying to him, "Look, I have to prepare this  
7 whether you like it or not and my document is going to have  
8 go over the fact that 87 out of 90 companies are doing this  
9 way and you're one of the three." I think that would be very  
10 helpful.

11 MR. POZEN: Two things: We heard from a number of  
12 people involved in the PCAOB inspection process that actually  
13 nondocumentation was a big issue for them, that  
14 they -- noncontemporaneous documentation -- so they felt that  
15 although you may say that is prevalent, it doesn't seem to be  
16 that prevalent or at least there are a number of cases where  
17 people are not documenting.

18 Second of all, the reason we were reluctant to have  
19 a very specific set of documentation requirements that pretty  
20 much it depends on the importance of it. I think that goes  
21 back to something Scott was saying is we're a little worried.  
22 We don't want to create a situation where people feel like  
23 they have to have a huge documentation on every small  
24 accounting judgment. We're sort of trying to say let's have  
25 the appropriate documentation for the level of judgment.

1           The third point is you had -- I mean, again, if you  
2 think that there are specific factors or toning of the  
3 factors that could improve those, we welcome your specific  
4 suggestions, because except for the thing on documentation,  
5 because we don't -- we're trying to reach a balance and  
6 between not just piling up lots of documents for no reason.

7           MR. GRAZIANO: Yeah. And just two brief reactions  
8 to that. First, consistent with my view that rules  
9 matter and rules are very important, I'd rather see  
10 rules -- more rules rather than less -- in terms of the  
11 documentation requirement. The PCAOB inspections you talk  
12 about are typically not public. There is some public  
13 discussion of them after the fact, but you don't know which  
14 company and --

15           MR. POZEN: No. We don't know that either, but  
16 what we do know is that when talking to the people at PCAOB  
17 they say that one problem that occurs when they find -- when  
18 you say to them well, when you find problems in the audits,  
19 and they say one problem that occurs more often than you  
20 would think is that people say they've exercised judgment but  
21 when they ask for contemporaneous documentation, it's not  
22 there. And so they get ex post facto documentation; and I  
23 think we would all agree it would be a truer process if it  
24 was done at the time.

25           MR. GRAZIANO: Yeah, and one other thing that I

1 see -- and I've seen very often in terms of the documentation  
2 that does exist -- I don't know whether the PCAOB has noticed  
3 this or not -- is that even in documentation drafted by the  
4 national office of the big four accounting firms, the  
5 documentation is very thin. Witnesses are often deposed on  
6 documentation and tell you things in their testimony that is  
7 not in the documents; and it's very hard, two or three or  
8 five years later to know what has happened at the  
9 time the judgments were made.

10 MR. POZEN: Yes. I think we have John and maybe  
11 Randy wanted to talk.

12 MR. HUBER: Let me just try a couple of things.  
13 I'll try the last one first about lack of documents by  
14 auditors.

15 While AS 2 was replaced by AS 5, AS 3 was not  
16 changed; and the one point that I can tell you there is the  
17 documentation of auditors is huge. And the fact of the  
18 matter is, relatively speaking, from even five years ago AS 3  
19 requires much more documentation. One of the criticisms that  
20 you can have of the PCAOB inspectors is that they are  
21 document-driven with respect to the review that they do, but  
22 the fact is the audit firms are preparing it. I've seen it.  
23 I've worked with it; and I can tell you that they do it.

24 Second point: I wrote rules for the SEC for six  
25 years. Most of the rules you guys like I wrote; if you don't

1 like them, I didn't write them. Okay. The fact of the  
2 matter is there are two types of rules --

3 MR. POZEN: The ones that you wrote and the ones  
4 everyone else wrote.

5 MR. HUBER: I haven't written any lately, but the  
6 fact of the matter, okay, there are two types of rules:  
7 legislative rules and interpretive rules. And the fact is if  
8 you do this, as a rule, it will be an interpretive rule, like  
9 Rule 176, which is an interpretive rule with respect to due  
10 diligence. Rule 176 is about that long, okay? It does not  
11 do very much in terms of specifics, but it gives the kinds of  
12 elements that people should take a look at with respect to  
13 due diligence. I commend that to your attention, because as  
14 a rule-writer I can tell you that the great fear of a lot of  
15 people -- and I saw it myself when I was doing the  
16 tender-offer rules -- was a court case coming down the pike  
17 that will, in essence, write the rule for you before you can  
18 write the rule. And that's the kind of situation that we are  
19 in.

20 I'd rather have the committee set forth a  
21 framework, whether it be, as Scott suggests, a nonrule that  
22 is followed or rule. I would like to have the committee do  
23 it in a decent fashion with the benefit of input from  
24 investors and from everybody else rather than to have a court  
25 case come down and, in essence, make the rule for all of us.

1 And as much respect as I have for the judicial system, having  
2 this highly technical area taken care of by a framework is a  
3 far, far better thing.

4 And as I said in my remarks, we need it. We need  
5 it from the standpoint of preparers and from the standpoint  
6 of auditors. And I think, if I may make one last point here,  
7 there has to be a distinction between auditors and the  
8 preparers with respect to the framework. In other words,  
9 just like the commission came out with its own management  
10 guidance on 404, there has to be a reflection of the  
11 in-house -- the company preparers -- with respect to this;  
12 and the same standard for auditors should not necessarily  
13 apply with respect to the company people.

14 MR. POZEN: I think on that point we have had  
15 considerable discussion on that issue --

16 MR. COOK: You know, Bob, it might help though to  
17 go to John's point, which is a point I was going to make.  
18 You've got in this discussion this focus on these things to  
19 think about, as if this is only for auditors. This is not  
20 only for auditors. This is first and foremost for the  
21 preparers; secondarily, for the auditors evaluating the  
22 judgments the preparers have made. So the context of our  
23 remarks here should at least recognize we're not talking  
24 about auditor documentation in the first instance. We're  
25 talking about preparer documentation and then auditor

1 documentation --

2 MR. FLETCHALL: I was going to add a comment about  
3 documentation. And while the names of the issuers were not  
4 actually disclosed, if one spends time looking at the  
5 publicly available portion of PCAOB inspection reports, a  
6 fairly common theme is an absence of documentation and  
7 sufficient audit evidence basically to support, I'll say, the  
8 issuer's accounting treatment. So in that sense, I do believe  
9 that this framework will improve our preparers' documentation  
10 contemporaneously with the decisions made. And we seldom  
11 have an issue, I would say, of insufficient audit evidence if  
12 we have a very good basis from a preparer, where we usually  
13 start having these issues or if a preparer doesn't have good  
14 documentation, the auditor puts some together and it's not  
15 deemed to be sufficient for the inspectors.

16 MS. GRIGGS: I just had a question. I'm not sure  
17 who the best person is to ask this.

18 Some of the criticism of this framework is that it  
19 will result in additional costs to companies because there  
20 will be an adverse inference in litigation if there is no  
21 such documentation, that they didn't do the work; and then  
22 they make -- I guess, Jonathan -- your point that companies  
23 do it now so you don't need it, so why do you write anything  
24 when, first of all, good companies are doing it and having it  
25 in writing is just going to cause additional costs for

1 companies and will possibly adversely affect them in  
2 litigation if they haven't perchance documented a particular  
3 judgment. And I'm just weighing that on balance.

4 And I know, Scott, you sort of raised those same  
5 points.

6 MR. POZEN: I should point out that we did include  
7 a sentence or two to say that this would be nonexclusive.  
8 There is an attempt by us to say this isn't the way you can  
9 go about this, because if people have better ways to support  
10 them. But, nevertheless, the point Linda makes could be come  
11 about, so --

12 MS. GRIGGS: I'm just curious --

13 MR. POZEN: Jonathan, you want to respond?

14 MR. CHADWICK: I would say from my perspective, I  
15 don't see any additional costs, not because we are not  
16 documenting any today, but because we are going through this  
17 process; and I'd like to think we are not an exception, but  
18 it's just a standard practice. So the additional costs per se  
19 of this -- it only starts becoming additional costs if you  
20 all impose a framework that is absolutely prescriptive as to  
21 form. I could show you a set of binders with a bunch of  
22 white memos. And I understand the point that's just been made  
23 with respect to documentation. As I've understood the shift  
24 over the last five years, the burden is on the issuer to take  
25 a position with respect to accounting standards; and I

1 actually think that shift is absolutely appropriate. As an  
2 ex-auditor myself I would assist my clients coming to the  
3 conclusion they should be coming to more often than not more  
4 than ten years ago; and I think that shift has actually been  
5 beneficial. But I can tell you for companies -- certainly  
6 mine and others that I was speaking to last  
7 week -- absolutely the reaction when reading the framework is  
8 that it seems to be written in a way that -- this is an  
9 assumption that we are not doing that, and I would say for  
10 certainly the caliber of the organizations that I've been  
11 mixing with over the last couple of weeks, there's a very  
12 strong sense or feeling that this is a really good framework  
13 that puts people on notice, frankly, as to what should be an  
14 acceptable level or standard, but to prescribe an exact form  
15 of documentation would be a mistake. But I don't see any  
16 additional costs, frankly, around this. I see clarity.

17 I can't speak for what other companies are doing,  
18 but I think, if I could just make a comment, I think where  
19 the additional disclosure -- I think where the additional  
20 documentation actually does come out is as we become more  
21 principles-oriented, I think you're going to find a natural  
22 requirement for more disclosure in the financial statements,  
23 which I think can only be a good thing.

24 MR. POZEN: Scott. And then we'll come back.

25 MR. TAUB: Myself, I look at the way this is

1 written and I think it shouldn't impose additional costs for  
2 the very reasons that Jonathan has described. The firms that  
3 are already doing it are already doing it. Firms that aren't  
4 already doing it -- well, then this is going to be helpful;  
5 and I don't perceive that as a burden. But I have seen  
6 things go awry. I recently found out at a meeting that a  
7 speech that one of my staff people made in 2005 had caused  
8 valuations of customers' relationships to be done in only one  
9 way for the last three years in purchase accounting, when  
10 that wasn't the intent at all. It was merely to point out  
11 something that one company had done wrong. So I worry about  
12 unintended consequences like that. And that's why I said in  
13 my opening remarks that I understood the concerns. I think  
14 the committee, though, has tried to be very careful to write  
15 this in a way that that shouldn't happen, but that doesn't  
16 mean it won't.

17           And one brief comment in regards to the  
18 contemporaneous documentation. Just to make clear my support  
19 for this framework is in part because the framework I think  
20 makes very clear that the evaluation and the documentation  
21 needs to be done when you initially account for the  
22 transaction, not two years later when the SEC asks about it  
23 in a comment letter, because routinely I would see that. The  
24 SEC could ask. The company would say, Okay. We have now  
25 analyzed it; and in our judgment the accounting we

1 accidentally did two years ago without even realizing this  
2 was an issue turns out to have been correct. Well, that  
3 doesn't do anything for me. This framework, I think, is  
4 quite clear that you got to be doing this when you initially  
5 do the accounts.

6 MR. POZEN: Dennis?

7 MR. JOHNSON: I just want to say from an investor's  
8 perspective I hope the two positions that were just noted  
9 about cost are correct. But to the extent that they are  
10 incorrect, I would just say the costs that would be incurred  
11 or that could be incurred from implementing this framework,  
12 we think, would pale to the costs associated with the decline  
13 in market value in the event that our portfolio companies get  
14 involved in substantial restatement.

15 MR. POZEN: I notice, Dennis, that CalPERS took a  
16 pretty strong position against the safe harbor but seemed to  
17 be in your letter relatively supportive of what might -- I  
18 don't know what exactly the term here is -- but a flexible  
19 framework or policy framework.

20 MR. JOHNSON: That's correct.

21 MR. POZEN: So that seems to work. And I think  
22 that probably would keep costs reasonable; but understand your  
23 point.

24 Greg, you wanted to ask.

25 MR. JONAS: It was a question for Dennis; and maybe

1 it was just my confusion so, please, just clarify if I am  
2 confused. I had thought that you were kind of downbeat about  
3 our framework, not in love with it.

4 MR. POZEN: I don't know if we insist on that high  
5 a level of enthusiasm.

6 MR. JONAS: But I suspect that you  
7 would agree that bad judgments are at the heart of a lot of  
8 problems that CalPERS and other investors see and suffered  
9 through. And so our goal here is to raise the quality of  
10 judgment, so if we're missing the mark, how should we go  
11 about raising the quality of judgment?

12 MR. JOHNSON: We do support in principle the  
13 framework that you are endorsing. I would just reiterate  
14 what's in our written testimony as well as in my oral  
15 comments that input, for example, from the investment  
16 community in finalizing this framework and getting companies  
17 to adopt we believe would strengthen it, would not constrain  
18 it, reduce the flexibility that currently exists but would  
19 just add another important perspective that we think would  
20 reinforce the protection of investor assets.

21 MR. JONAS: Thank you for that comment.

22 MR. POZEN: Could I also -- I know this goes to the  
23 prior panel, but I did want to make sure that we understood  
24 this. You were against the sliding scale, if --

25 MR. JOHNSON: That is correct.

1           MR. POZEN:  If you could just give us a little  
2  explication on that, because we were trying to say that in  
3  all cases you need to consider quantitative and qualitative  
4  and that essentially the higher the quantitative then sort of  
5  qualitative would have to be much higher to overcome it if  
6  qualitative was lower.  So it was an attempt maybe not as  
7  articulate as we should have been, but it was an attempt to  
8  convey that.  I wanted to understand what was the concern.

9           MR. JOHNSON:  To the extent that the language could  
10 establish a stronger relationship between the quantitative  
11 and qualitative considerations that you'd mentioned, that  
12 would be of importance to us.  What we are concerned about is  
13 what, in our professional judgment, might be a very large  
14 quantitative adjustment that is not deemed to be material.  
15 But yet a series of subjectively chosen qualitative issues  
16 that could be material -- again, something that would just  
17 establish a closer relationship between those two to provide  
18 some guidance on when materiality can be defined -- we  
19 think that would be beneficial.

20           MR. POZEN:  Scott, did you want to say something?

21           MR. RICHARDSON:  Asking for precision on something  
22 that's inherently uncertain, I think, is impossible, so this  
23 is by its nature an unwieldy beast.

24           MR. POZEN:  I think you're absolutely right, but I  
25 guess we've internally debated.  We could have just said you

1 need to consider quantitative and qualitative factors in both  
2 directions. So some people have said sliding scale helps  
3 them think about it. Other people say, Well, it sort of  
4 conveys an image that doesn't work for them, so -- yeah, so  
5 maybe the argument is that, you know --

6 MR. RICHARDSON: You should look at both, for sure.  
7 I think a good example would be, like, how you vote on a  
8 restatement. So a company has had a restatement and it comes  
9 to the directors for a vote. What information should we look  
10 at to vote and have to meet our responsibilities? We look at  
11 both qualitative and quantitative information, for sure. Do  
12 we have anything in our proxy guidelines that says 50% vote  
13 on this, 25% vote on this? No, it's very much a case by case  
14 with some underlying structure. To the extent you've got  
15 reasonable quantitative metrix, it might be that the stock  
16 market will tell you the economic materiality of the  
17 restatement. You get the cleaner vent date around when it's  
18 announced. And then you might say, Should we automatically  
19 vote against members of the audit committee? Maybe not. It  
20 could be something that's reasonably beyond their expectations  
21 to report as part of the internal audit process.

22 MR. POZEN: Yes, Dennis?

23 MR. JOHNSON: If I could just also say that we  
24 would be very sensitive to a series of relatively small  
25 quantitative restatements leading over time to be a very

1 material quantitative restatement. And so, again, just being  
2 able to establish a stronger relationship between the  
3 quantitative and qualitative considerations, we believe,  
4 would protect the interests of investors.

5 MR. POZEN: Thank you. I don't know -- Ed?

6 MR. NUSBAUM: Randy made a comment earlier in your  
7 comments about the need for improvements and disclosure  
8 relative to the items that would be discussed or addressed by  
9 this judgment framework. I'm curious, Randy, if you want to  
10 maybe expand on what you had in mind or what you think we  
11 should say. And perhaps it would be useful if either Scott  
12 Richardson or John Huber or Dennis, from your perspective if  
13 you think there's anything we should do in terms of enhanced  
14 disclosure -- something we've struggled with as a  
15 subcommittee, I must admit.

16 MR. FLETCHALL: In other parts of the report, I  
17 certainly see that struggle; and I'm trying not to create a  
18 disclosure overload and, in fact, deal with what you  
19 currently are having to deal with. I mean things need to  
20 come out of there. If we're talking about something so  
21 important that these are the critical accounting  
22 calls -- these are the accounting --

23 MR. POZEN: But that's exactly the point that we've  
24 been debating. We thought for while we should say if it's a  
25 critical accounting policy and that's where you're making the

1 choice between Policy A and B that there should be  
2 disclosure, but that's pretty clear in the requirements, that  
3 the concern we had was that if you go sort of down to  
4 lower-level judgments and sort of how much public  
5 disclosure -- we are not asking people for  
6 documentation -- but how much disclosure outside of critical  
7 accounting policies do we really want to put in the 10-K's or  
8 10-Q's? So I think that's the nature of Ed's questions. And  
9 we struggled with that a lot.

10 MR. FLETCHALL: And some could be just maybe fully  
11 dealing with the spirit of the current rules and making sure  
12 there's enough robust disclosure under those, as well as I  
13 think you could look at the list of -- the ITAC has been  
14 referenced and they had some ideas. Or you can go back as  
15 far as the 2000 rule proposals in critical accounting  
16 policies and accounting estimates for some additional  
17 elements, not for every accounting decision that's made,  
18 Chairman, but for those that are most critical and those  
19 estimates that are subject to the most uncertainty, you know;  
20 a little more perhaps on subjectivity, on the assumptions, on  
21 how they change over time. And, again, to borrow from  
22 Jonathan, many good companies, many good disclosures are  
23 getting probably almost that right now.

24 MR. POZEN: I think that would probably amount to  
25 our emphasizing -- remember, as you know, critical accounting

1 policies are ones that are both material and involve  
2 significant judgment, so we would be emphasizing to the  
3 registrants something that then Jonathan, obviously, already  
4 does, that they should give good explanations of their  
5 choices of critical accounting policy, which I don't think we  
6 have any problem. We just thought that that was sort  
7 of -- we basically said you should follow current disclosure  
8 requirements rather than select that. But we can easily give  
9 that as an example, since obviously that's the most  
10 important.

11 MR. FLETCHALL: That would be one that's the most  
12 important that comes to mind to me.

13 MR. CHADWICK: Perhaps there's one other thought as  
14 well, because I think we're going to -- I'm guessing, but I  
15 believe we're going to find there is less prescription in the  
16 form of our rules. I hope that's going to be the case at  
17 some point.

18 MR. POZEN: Well, I think at this table, we're  
19 not --

20 MR. CHADWICK: I know. I know.

21 MR. POZEN: -- so if we move to IFRS, it will  
22 surely be true.

23 MR. CHADWICK: But with that presumption perhaps in  
24 mind, I think one of the things I think we're likely to see  
25 without less prescription publicly, I think we're going to

1 require more prescription inside the company about what the  
2 actual application of a particular framework is going to be  
3 or a particular rule set is going to be. So my point here is  
4 to the extent that there is a known difference in practice  
5 but one that is perhaps not clear to the investor as you  
6 specifically disclose it, I think that would be -- if you  
7 know there's variations in practice and you don't have a  
8 clearly disclosed set of accounting practices with respect to  
9 that, I think the disclosure has failed in that regard.

10 MR. GRAZIANO: May I add something as well?

11 MR. POZEN: Sure.

12 MR. GRAZIANO: There was one question earlier that  
13 actually went unanswered, which is "Should there be an adverse  
14 inference if there isn't contemporaneous documentation  
15 internally?" And I think this plays well with what we just  
16 heard from Jonathan, because my response to that is, why not?  
17 Why shouldn't the SEC in looking at companies or civil  
18 litigants be able to argue for an adverse inference? Isn't  
19 that the best way to encourage contemporaneous documentation,  
20 that companies will know if they don't comply and they  
21 don't -- this is not about what they say publicly but what  
22 they record internally. Why not? Wouldn't that be a good  
23 thing?

24 MR. POZEN: Well, I guess, Salvatore, I believe if  
25 we made this what John would call a legislative rule, then if

1 you didn't have documentation, it could be used against you.  
2 But that means if you do follow all the procedures it can be  
3 used for you. So I don't think you would like that.

4 MR. GRAZIANO: But I think that's where this --

5 MR. POZEN: I'm not sure you could have it both  
6 ways.

7 MR. GRAZIANO: No. But I think that's where this  
8 page is going. Whether or not we call it a safe harbor, I  
9 think the effect of something like this is a sort of safe  
10 harbor that will be argued vigorously in the courts, not as  
11 a technical safe harbor, but it will be, "I  
12 complied, I followed the nine steps before I acted  
13 reasonably." I think --

14 MR. POZEN: We did try to preface that, also, with  
15 you had to act in good faith and, you know, we tried to put  
16 some considerable rubber in it. But I understand your point.

17 I want to make this -- Jonathan and then  
18 John -- Dennis, excuse me -- Dennis and then John.

19 MR. JOHNSON: I just wanted to call to the  
20 committee's attention language in our written testimony. And  
21 we would just encourage the committee to look at the time  
22 period in which an error is actually disclosed; and it is our  
23 position that that should be disclosed during the period in  
24 which the error was identified.

25 MR. POZEN: You mean, just so I'm clear, that if it

1 was in a quarter it means that in the next quarterly report?

2 You wouldn't ask for a special quarterly report?

3 MR. JOHNSON: That is correct.

4 MR. POZEN: At the next quarter.

5 MR. JOHNSON: That is correct.

6 MR. POZEN: I think that is our general view, too.

7 MR. RICHARDSON: I think the origination of the  
8 question was at the heart of disclosure. I think that's it.

9 A lot of the discussion has been about documentation  
10 internally, that the preparers and the auditors would have  
11 access to, but as an investor we don't get to see any of  
12 that. We're limited to what's in the externally prepared  
13 financial report -- general-purpose financial reports.

14 MR. POZEN: That is why we were -- that's why the  
15 discussion here focused on critical accounting policies,  
16 because by definition those are ones that are material and  
17 involve judgment.

18 MR. RICHARDSON: They get some disclosure, but to  
19 go to back my earlier point, there are first-moment  
20 disclosures and second-moment disclosures to get at the heart  
21 of the volatility. So, indeed, that would be something I  
22 think very important to a consumer.

23 MR. POZEN: That's a good point. We haven't really  
24 focused on the level of disclosure for those things.

25 MR. HUBER: I would respectfully submit that you

1 don't need a rule for everything and that sometimes what you  
2 need is to focus on an existing rule; and critical accounting  
3 policy started out as critical accounting policy, which was  
4 nothing more than a regurgitation --

5 MR. POZEN: Did you write that rule, John?

6 MR. HUBER: No, that's not mine. I like it. I like  
7 it, but it's not mine. Okay.

8 The fact of the matter is when it started out, it  
9 was nothing more than a regurgitation of what was in the  
10 footnotes to the financial statements. Through staff comment  
11 in the division and through rule-making proposal  
12 professionals it became critical accounting estimates. This  
13 is a relatively new rule; and the fact is that in terms of  
14 looking at the kind of process that companies go through to  
15 get used to that sort of a rule, the point that Randy made is  
16 an excellent point with respect to focusing in on it. The  
17 point that Jonathan made about having -- if there is a  
18 divergence of practice in a particular area, that is  
19 something that should be there because that's part of the  
20 judgment process with respect to it. And, if indeed, there  
21 was an alternative that the company could have picked -- for  
22 example in software revenue recognition, whether it's SOP  
23 97-2 or 104, to discuss that sort of a point is very  
24 important with respect to the idea of showing the judgments  
25 that are involved. I would submit, however, that you don't

1 need to have a new rule, because this one is already there.  
2 It has to be enhanced in terms of the disclosure and it has  
3 to be enhanced in terms of the review process. And, quite  
4 frankly, people like Scott and Dennis have got to insist that  
5 companies do that level of disclosure, because then you'll  
6 see people coming up to the level that Dennis wants.

7 MS. GRIGGS: John, the thing that the committee was  
8 struggling with was whether we should build into the  
9 framework just a reminder that there needs to be adequate  
10 disclosure, because I agree with you the rules are there.  
11 But is it something that should be built into the framework?  
12 It really is a reminder. The framework isn't a rule --

13 MR. POZEN: It sounds like John is saying maybe in  
14 the preface or something, just cross-reference that this is  
15 there and it's already there and it's to be taken seriously  
16 because it's an important disclosure.

17 MR. HUBER: My answer to you is just a reference to  
18 critical accounting estimates is not something that Salvatore  
19 would like, okay? Because from my standpoint it's  
20 everything. In other words, that's one place to put this,  
21 but you've got the rest of MD&A.

22 MR. POZEN: That was our problem, that if you  
23 mention just one thing, people would say, "Well, what about  
24 something else?"

25 MR. HUBER: Exactly; and I would submit that it's

1 the whole megillah with respect to that sort of thing,  
2 because I mean a year ago people wouldn't have focused on,  
3 you know, the idea of the third level of 157 with respect to  
4 liability, okay? And would they have put in the same quantum  
5 of disclosure a year ago in the 2006 10-K that they did for  
6 their 2007 10-K? The answer is no. Do you want to add a  
7 rule to do that? No. You want the markets to tell you how  
8 to do that and you want circumstances -- facts and  
9 circumstances to do that.

10 MR. GRAZIANO: Can I make a brief point on that?

11 MR. POZEN: Sure.

12 MR. GRAZIANO: I don't actually understand the  
13 concern that disclosure will lead to litigation. In fact,  
14 disclosure in my opinion is what prevents litigation. The  
15 more disclosure at the time of these initial financial  
16 statements coming out about what the judgments were and how  
17 they were made, the more difficult it is to bring a case.  
18 These cases happened because of lack of disclosure.

19 MR. POZEN: I think the concern is to try to focus  
20 the disclosure on material significant accounting policies  
21 that are the ones that really drive the financial statements  
22 and drive the litigation ultimately and that when we explore  
23 the issue of judgment, it's judgment at so many different  
24 levels, some of which is relatively trivial or just very  
25 mundane; and we didn't want to clutter up the 10-K's with

1 that sort of disclosure, so trying to focus on the important  
2 things. But I think your point is well taken.

3 MR. GRAZIANO: It's a difficult thing to prescribe.  
4 I think the individual issuer knows what the real issues are  
5 and there's just -- it's going to be up to them if they're  
6 going to comply or they're going to take the risk.

7 MR. POZEN: Susan, I think you wanted to --

8 MS. BIES: I'm a little confused over different  
9 people using at different times the words "risk,"  
10 "uncertainty," and "volatility." Let me tell you what's  
11 troubling me here. We're talking about a judgment  
12 framework around accounting policies. And to the extent you  
13 have emerging practices or transactions or lines of business  
14 or products or whatever, there is some uncertainty. That's  
15 what I think this rule will help lay framework on the  
16 judgment that needs to be used to how do you account for  
17 something that really hasn't existed before.

18 I would hope no one is confusing market volatility  
19 or change in the accuracy of an estimate with the terms  
20 "risk" and "uncertainty." Risk and uncertainty are two very  
21 different things. Clearly what we are going through now in  
22 subprime, there is a lot of volatility. If there was better  
23 disclosure, I think people shouldn't be surprised. Fair  
24 value isn't the answer. But there needs to be better  
25 disclosure about how volatile it is and people should say, "We

1 are only using a hundred days' back-look involved," knowing  
2 that that didn't include the housing-market shakeup would have  
3 told a user of statements that you are grossly  
4 underestimating volatility here.

5           On the other hand, the lack, as we have learned in  
6 hindsight -- I wasn't this smart when I was on the fed  
7 board -- the fact that banks changed and other mortgage  
8 lenders changed from underwriting first the ability to repay  
9 and secondarily looking at the asset value to see if the home  
10 would be the second source of repayment to just looking at  
11 the asset value grossly made all of the measurement models  
12 for risk off-base and in an asset bubble on housing made it  
13 even more problematic. That wasn't disclosed at all. That's  
14 uncertainty -- how you apply a risk model in a new world.

15           And I think one of the things that we need to be  
16 clear about here is the better this disclosure is around  
17 risk measurement periods and when uncertainty is  
18 created -- because models don't work -- is a moment of  
19 measurement. I think it's different than the principle we  
20 are trying to get at here for a framework of how you choose  
21 appropriate accounting policy. And I just -- I get troubled  
22 that we seem to be using them interchangeably in some of  
23 these comments; and I see them as very different issues  
24 between risk and uncertainty over measurement and uncertainty  
25 over the appropriate accounting policy.

1           MR. POZEN: Scott. You can see why Susan was a  
2 very effective bank regulator.

3           MR. TAUB: Believe me, I met with her in her role;  
4 and I agree.

5           I agreed with 90 percent of what you said, Sue.

6           MS. BIES: That's a record for us.

7           MR. TAUB: I agree. The one thing I did want to  
8 point out is that the framework -- the progress report does  
9 indicate estimating the actual amount to record as one of the  
10 items of judgment. So when you get to measurement, I think  
11 we do need to acknowledge that this framework is intended to  
12 apply to judgments about measurements.

13          MS. BIES: Right. The only point I was trying to  
14 make is any measurement, when you have the dynamics of  
15 measuring losses or risk, is brand-new. You have no historic  
16 data. By definition, your confidence interval is going to have  
17 a fat tail. It's not reliable.

18          MR. TAUB: Well, that's a bigger indictment of  
19 accounting.

20          MR. RICHARDSON: You can disclose that information.  
21 So it's a level for which there is no reliable market. If  
22 you're off the spreads a few points, no one's in play. Do  
23 you use a model? Which model? Do you use distributional  
24 assumptions?

25          MR. POZEN: We have Greg and then David.

1           MR. JONAS: The reason I wanted to butt in is I  
2 wanted to particularly follow up with Scott on this point,  
3 because you made in your comments, appropriately, a big deal of  
4 the uncertainty, the ranges around key judgments. That was in  
5 our mind when we were thinking about this stuff. Let me ask  
6 you -- let me posit what I think to be a fairly common scenario  
7 in a tough judgment and then ask you what ideas you might  
8 have for the type of disclosure that would be most useful to  
9 you in getting around this range around the stuff.

10           So I make a judgment and in the running I had three  
11 choices: A, B, and C. I picked C and I followed the  
12 framework to pick it. What would you ask the company to say?  
13 What would be most useful to you about the three choices?

14           MR. RICHARDSON: Some measure of the relative  
15 dispersion across those choices. Now, is it at -- if it's  
16 only three, it may be difficult to get a good measure of that  
17 dispersion. But I guess in most instances there's a lot more  
18 than three choices. There's a lot of statistical measures  
19 that could be put here, but in terms of your sentiment from  
20 earlier, currently there's nothing.

21           MR. POZEN: It looks in many cases if there are  
22 just two or three. But when you say "dispersion," do you  
23 mean what would be the dispersion of results?

24           (Simultaneous discussion.)

25           MR. JONAS: In my example, there were three in the

1 running but the truth is there's actually 500 possible  
2 outcomes but three were seriously considered. In my  
3 experience, the typical scenario of a tough judgment. The  
4 mind can't deal with 500 scenarios. You need to do something  
5 to kind of narrow it. Three are in the running. But your  
6 point is -- talk about the three; and then I hear Susan  
7 saying -- a point that I agree with -- that if there were 500  
8 in the running, tell me how -- tell me the tales. Give me  
9 some rough feel about the tail. Is that what you're --

10 MR. RICHARDSON: You are not going to be precise  
11 with measuring second moment of some of these point estimates  
12 that are in the financial statements. But currently there's  
13 nothing guarding that. Stock option expense would be a good  
14 example.

15 Four key parameters: volatility, discount rate,  
16 dividend yield, and time of maturity. The volatility and  
17 time of maturity -- there's huge estimation error around  
18 that. People in the company may be in the best position to  
19 guide investors with respect to those point estimates, but  
20 we're still looking at one number. 35 percent's devolved.  
21 Well, was 35 percent coming from 33 to 37 or 20 to 40? That  
22 would help a lot.

23 MR. JONAS: So what I hear John Huber then  
24 reminding us is that if we're going to go this extra  
25 distance, which makes a world of sense to me, we can't do

1 that for 500 judgments. We got to narrow this down to the  
2 vital few; and if the guidance of the commission thought  
3 about in critical accounting estimates was a way that we  
4 should look to narrow the field.

5 MR. HUBER: What you really want to avoid is a  
6 blizzard of information that just inundates the reader. And  
7 if you look at the TSC vs. Northway case where the Supreme  
8 Court adopted the "would" test, it was looking at the  
9 "might" test -- what might a reasonable investor look at,  
10 what may a reasonable investor look at? And in TSC vs.  
11 Northway in 1976, the Supreme Court said, we really don't  
12 want to inundate investors. So the fact is that's a  
13 principle, if you will, that the Supreme Court is laying down  
14 with respect to the concepts here.

15 MR. GRAZIANO: May I say something here?

16 MR. POZEN: Sure. And then we'll get to David.

17 MR. GRAZIANO: Going back to the subprime example,  
18 nearly all of these subprime issuers did include in their  
19 critical accounting policies specific disclosure about how  
20 they recorded residual interest and how they recorded  
21 loan-loss reserves. However, uniformly those statements were  
22 generic in nature and there were no commentary about the  
23 decreasing standards being used for underwriting, because the  
24 real estate markets were going up, the pressure was there to  
25 keep pumping out the loans. So we have to be careful. How

1 do we make that happen? There was absolutely a discussion  
2 about the GAAP rules that applied but nothing about the  
3 specific circumstances affecting these particular companies.

4 MR. POZEN: David.

5 MR. SIDWELL: I'd like to talk just a little bit  
6 about the connection that Jonathan and a number of people  
7 have talked about. While we've been very company-specific in  
8 the way we've talked about this, I think now we're in an  
9 environment where there is more principle-based standards;  
10 and you end up with companies' individual registrants  
11 following this framework documenting. And let's assume that  
12 you do have an increased range of alternatives, all of which  
13 would be valid by this documentation standard --  
14 contemporaneous, signed off by whoever -- audit committee,  
15 auditors, et cetera.

16 What do you see as the market reaction to that?  
17 And at what point do you see and what forces should try and  
18 close that range of outcomes, because I think we're going  
19 to hear a lot of -- as this principle-based discussion  
20 continues -- a lot of concern about range of alternatives.  
21 Have any of you given any thought to how you would  
22 like to see that happen?

23 MR. JOHNSON: There has been a longstanding  
24 discussion on the quality of earnings driven by the quality  
25 of accounting. And companies are compared based on the

1 quality of accounting that they use. And to the extent that  
2 a company using more aggressive accounting and more  
3 aggressive assumptions, if you will, to make their financial  
4 position look more attractive relative to its peers, then  
5 that has historically led to engagement by investors with the  
6 management and with the board members on this difference,  
7 with the expectation of some type of movement toward market  
8 standards, if you will; or at least some acknowledgment that  
9 maybe how that company is valued would not be a significant  
10 or would not be as high as a company who is using a more  
11 reasonable or conservative accounting approach. So I think  
12 the forces that are at work will continue to be at work; and  
13 I think this disclosure could only foster more discussion  
14 around that.

15 MR. SIDWELL: So it's sort of market-based. The  
16 market will react. How do you see, let's say, if there  
17 emerge five or six different interpretations which are all  
18 considered -- you know, these are all fine? Is that  
19 something that you'd expect to either have the SEC or the  
20 standards-setter narrow that range of alternatives? And over  
21 what time frame?

22 MR. JOHNSON: I don't have a position on the  
23 response to your question.

24 MR. RICHARDSON: Can I ask a question back? Why is  
25 it a desirable thing to narrow the range of alternatives?

1           MR. POZEN: I think the argument is that to the  
2 extent that you're trying to have comparable analysis and if  
3 people are using different sets of ground rules, then that's  
4 a problem. And, second of all, that it's unlikely if there  
5 are six alternatives, all six are conceptually equal in  
6 soundness, that it may be the case that two, for instance,  
7 might be stronger, conceptually, than the others.

8           MR. SIDWELL: I was actually trying to tease out  
9 this conflict between consistency and your judgment of what's  
10 appropriate in the circumstances for an individual  
11 registrant.

12           MR. RICHARDSON: Consistency's important. But I  
13 want to come back to disclosure. If there's sufficient  
14 information there, you can reverse-engineer the choices that  
15 were made and then redo it.

16           MR. POZEN: Yes, Scott?

17           MR. TAUB: I think the consistency-versus-diversity  
18 thing needs to be looked at a little bit deeper in a  
19 particular situation. Let's take, for example, depreciation  
20 methodologies. We all learned in accounting class that you  
21 could do straight-line, double-declining balances,  
22 sum-of-the-years' digits, consumption-based methodologies.  
23 There was no principle behind any of them. You just picked.  
24 That's bad diversity.

25           Now, we can disclose. We make disclosures about it

1 so that investors can evaluate and make some high-level  
2 adjustments, if they want to get consistency. But in that  
3 kind of situation you're talking about diversity with no  
4 principle. On the other hand, if the principle for  
5 depreciation was choose the depreciation method that most  
6 accurately portrays the benefit you achieve from the use of  
7 this asset, well, then we might get some choosing  
8 straight-line, some choosing double-declining balance, some  
9 choosing accelerating, some choosing the decelerating method.

10 But that would all be fine if they were all  
11 adhering to the principle of choose the method that best  
12 reflects your consumption. So sometimes I think diversity in  
13 outcome is good, because it reflects that people use things  
14 in different way. Other times, the diversity is just simply  
15 a matter of, "Well, I picked A and he picked C; and we're  
16 allowed to do whatever we want."

17 MR. SIDWELL: Because I wondered if you -- somebody  
18 was going to make the comment that because, I think in the  
19 factors that are laid out here -- critical and good faith  
20 thought process, consideration of diversity of practice was  
21 one of the items laid out here. And when we think about  
22 disclosure, is that an area that you'd expect to see greater  
23 emphasis on the need to disclose something where it's  
24 apparent there is a lot of diversity in practice.

25 MR. POZEN: Scott, did you want to?

1           Jeff?

2           MR. DIERMIER: Couple of comments. Susan, it's  
3 good to know that fair value is not the villain here.

4           And, Scott, I appreciate your comments on economic  
5 substance, a non-debatable point, I'm sure.

6           But I think one of the important things in  
7 the -- I'm glad you brought that up, David, because there is  
8 an element of market discipline that comes out of this  
9 discussion, particularly from Scott and Dennis. You know,  
10 investors aren't just looking at financial reporting in terms  
11 of X's and O's and the numbers and things like that. They  
12 may be using them for getting a sense of what we used to call  
13 quality of management, which quality of earnings connects  
14 with, so it might affect your proxy voting, might affect the  
15 assumptions you use in terms of potential outcomes in our old  
16 shop. If the company is rated as D, in terms of quality of  
17 management, we wouldn't touch this company -- and quality of  
18 earnings in the way they went about their processes were a  
19 critical element in that.

20           This disclosure -- this PJF -- may actually help  
21 the market in a lot of ways understand more clearly how  
22 companies are thinking about the principles by which they  
23 communicate and the trust relationship in financial reporting  
24 with their investors and may actually turn out to be a very  
25 salutary effect in terms of the ability of the investment

1 marketplace to tease out this notion of what is the quality  
2 of management that I'm working with and how do they perceive  
3 communicating with their investors at a very nice level.

4 MR. POZEN: I didn't realize that professional  
5 judgment framework had gotten its own acronym -- PJF. I've  
6 got to think about that one.

7 Bill, do you have any questions?

8 MR. MANN: Yeah, I wanted to ask Scott Taub about  
9 one of the points that you made in your document that was  
10 well taken was the fact that there's risk that best-practice  
11 framework would be treated like a rule, that we'd end up sort  
12 of in the same place.

13 Just in your professional experience, how do you  
14 suggest we counteract this?

15 MR. TAUB: Well, one way I think is to make it more  
16 of a working policy than a legal safe harbor and  
17 interpretive -- a piece of interpretive guidance rather than  
18 something that rises to the level of a formal legal safe  
19 harbor.

20 Beyond that, I have a hard time evaluating, because  
21 I take some of Salvatore's remarks very seriously, that no  
22 matter how we phrase this, it's going to wind up being  
23 brought up in court. And it will wind up, I believe,  
24 brought up in two ways: Those that have done it will say,  
25 "I've done it, can't touch it." And when a company hasn't

1 done it, the other side will say, "See, they didn't do it, so  
2 you got to assume that they were not acting in good faith."  
3 And I think it's beyond my ability to predict how the courts  
4 will really deal with those kinds of things. My hope is that  
5 however this is put out, if it's put out, it will have so  
6 many descriptors and so much explanation that it's very clear  
7 what it should be used for, what it shouldn't, but, you know,  
8 at that point, we're at the mercy --

9 MR. MANN: That sounds like rules.

10 MR. JONAS: But how do the courts have the  
11 jurisdiction to deal with this question? Because in  
12 countless places in the literature, there are lists that  
13 people -- that the standard-setter has said, "Thou shalt think  
14 about the following five areas;" and has this already played  
15 out in other areas where standard-setters have introduced a  
16 framework?

17 MR. TAUB: To me, sometimes it's worked well and  
18 sometimes it hasn't worked well. And I can't figure out what  
19 the factors are that make it work well the times it does and  
20 make it not work well the times it doesn't.

21 MR. GRAZIANO: I think the answer to that is yes  
22 and no. I think the difference is this proposal takes things  
23 to a level that they haven't been before. Maybe an example,  
24 in response to your question, is the standard of field work  
25 that requires you to gather competent evidentiary matter that

1 is clearly used by the courts to evaluate whether or not an  
2 auditor was acting recklessly or reasonably in situations.  
3 But here we're talking about a framework that is so  
4 overarching that I think we're well beyond the example I just  
5 made.

6 MR. POZEN: Ed?

7 MR. MCCLAMMY: An observation: We talked earlier  
8 about costs related to this; and I think we should  
9 acknowledge that for some companies there will be a cost to  
10 implement this. I'm not surprised that all that are here  
11 have very large companies that are very well documented. I  
12 think, even in this case, midsized companies you'll find have  
13 things very well documented. I think where the additional  
14 cost is going to come in is related to non-accelerated filers  
15 that just don't have the technical staff -- and they probably  
16 have some documentation. It's just not going to be at a  
17 level that you find in midsized and large-cap companies.

18 Having said that, I think this is the one area  
19 where it's well worth the cost to head in this direction,  
20 because I do think it's critical if we're going to a more  
21 principles based, that we just have to have this framework and  
22 we have to have the documentation behind it. So I  
23 think -- I'm not sure what Tom's thoughts are. He's  
24 representing a small company, but I think this is a case  
25 where the small companies are just going to have to incur the

1 costs.

2 MR. POZEN: I would say even if we don't go to a  
3 principles based, there are more and more judgments in  
4 accounting. There's so many complex transactions -- fair  
5 value -- just the whole thrust of it. So even whether we go  
6 to IFRS or not, you can't just get away from it. And if  
7 small companies don't develop this discipline at some point,  
8 it will hurt them.

9 But I don't know. Tom, you're the --

10 MR. WEATHERFORD: Just one observation as well is  
11 what I'm seeing here, especially with -- in this day of  
12 Sarbanes-Oxley, especially the young auditors, the young  
13 CFOs, I'm seeing basically they're walking away from making a  
14 judgment. Being a former CFO, when I made a judgment,  
15 whether it was right or wrong, I tried to make the best  
16 judgment possible. And I was comfortable with that; and the  
17 audit partner was. But in this day of Sarbanes-Oxley,  
18 everyone walks away from a judgment. And it makes the job of  
19 the audit committee very difficult, because I think in the  
20 end it hurts investors by not having this framework.

21 So I think this framework -- whether these nine  
22 points are the right points, Salvatore, or there's nine  
23 others -- this starts us on the process of trying to get  
24 judgment back at the field level. And we'll make mistakes,  
25 but I think it's the right way to go and it's the best thing

1 for investors, in my opinion.

2 MR. POZEN: Mike.

3 MR. COOK: Tom said something kind of along the  
4 lines of what I was going to say as well,  
5 we've had good input and good discussion. We welcome  
6 more input and more discussion, but I think we ought to keep  
7 this framework in context as well. We're here to make  
8 recommendations to improve financial reporting. They may  
9 have implications for the judicial system and litigation and  
10 so on, but this isn't writing recommendations to make it  
11 easier or harder to sue people. That's not what we were  
12 charged with doing; and that's not what this was intended to  
13 do. I think the same point -- the very engaging discussion  
14 about disclosure -- but it reminds me of something we  
15 specifically said in here is one of the things this framework  
16 is not going to do is to improve GAAP or GAAP needs  
17 improvement. It is dealing with GAAP as GAAP is today.

18 I think some of the same concept applies to the  
19 issue of disclosure. To say that everything that is subject  
20 to the judgment framework should be disclosed in the  
21 financial statements, including all of the alternatives that  
22 might have been considered, is going beyond the capabilities  
23 of financial reporting in this process. Now, maybe there are  
24 other things which show flow from that.

25 I think a reminder of disclosure obligations and

1 the fact that a lot of things are going to be talked about  
2 and dealt with in this framework are the same items that you  
3 would expect to find disclosed, but certainly there are going  
4 to be things subjected to this framework that are not going  
5 to be disclosed in MD&A as critical accounting policies. It  
6 will have to do with measuring a particular item. It will  
7 have to do with what date a particular transaction is  
8 recognized. It's not going to be gone -- you know, every  
9 alternative that was considered is discussed in this.

10 I think we could do some things that get people  
11 thinking about the linkage between disclosure and the  
12 framework. I think to try and draw that linkage in any  
13 specific way would be, one, putting us in a role that we  
14 shouldn't be trying to play and probably beyond the  
15 capability of what this is about. But I think the notion of  
16 kind of keeping them in your thought process as you think  
17 about one and think about the other is a very sensible thing  
18 that we ought to try and accomplish.

19 MR. POZEN: I think we're nearing the end here. If  
20 there are any more questions or comments that anybody wants  
21 to make -- yes, Randy?

22 MR. FLETCHALL: If there's time available, I would  
23 want to go back. I didn't want to disrupt the flow of the  
24 introduction. But in the opening remarks when you asked me  
25 about specifics on kind of this -- I guess I'm passionate

1 about that auditor/client relationship, I just wanted to go  
2 back, because I have heard a little bit here, I've seen some  
3 of it in the written submissions and in other forums this  
4 concern that some people read this, they feel that auditors  
5 are going to be handicapped in doing their job. I want to  
6 make sure that is not the case.

7 MR. POZEN: That is definitely something we've  
8 discussed and we in no way want to impair that relationship.  
9 So to the extent that you can give us language that would  
10 give people comfort and suggest edits, we very much welcome  
11 that.

12 MR. FLETCHALL: And in part I think it's in many  
13 cases -- many spots -- I don't know whether it's 8 or 9,  
14 where it talks about the one making the judgments and then  
15 the other people who evaluate. When you talk about a  
16 preparer, it's always included the evaluator as auditor,  
17 regulator, third-party litigant; and it gives the feeling  
18 perhaps that you're kind of separating the preparer from  
19 auditor in this framework, as opposed to keeping them  
20 together. So I think that's one of the things that I would  
21 suggest -- eight or nine places in here when you're  
22 talking -- it's a natural flow that those are all the people  
23 that evaluate. But given that special relationship, I think  
24 if that word "auditor" is not in there every time you talk  
25 about who evaluates the preparer's judgment, you'd be better

1 off.

2 MR. JONAS: I thought a cornerstone of the auditing  
3 literature was management asserts, the auditor attests.  
4 Isn't that separation?

5 MR. FLETCHALL: Yes, it is.

6 MR. JONAS: Isn't the auditor supposed to be in a  
7 second-guessing position? We can't kind of put the auditor  
8 and manager in the same bucket and say together they come up  
9 with the management view, right? You're not suggesting that?

10 MR. FLETCHALL: I'm not at all suggesting that.

11 MR. POZEN: You can see that we've discussed this  
12 point at great -- so you can help us on that. And then  
13 there's an institutional issue where I think Dan Goelzer  
14 would say that PCAOB -- they have a bigger role vis-à-vis the  
15 auditor, so who has to adopt the framework for the auditor.  
16 So I think there a number of sort of subtleties here that we  
17 were trying to do, but we probably didn't get it quite right;  
18 and we'd love to have your help.

19 MR. FLETCHALL: Thank you.

20 MR. COOK: But I would say, Bob, in response to  
21 Randy, agreeing fully with what you said, I think it's very  
22 important in the other organizations where you can influence  
23 things like this, just don't lose sight of the other side of  
24 this. This does not grant any protection to the auditor from  
25 doing what the auditors are responsible for doing just

1 because somebody did or did not have a framework. It's  
2 challenges that need to be brought -- the challenge of the  
3 judgments that have been made have not been diminished by the  
4 existence of a framework; and it perhaps in some cases is  
5 even enhanced.

6 MR. POZEN: Okay. Well, again, I thank all of the  
7 panel for coming and thank the committee members for joining  
8 us and everyone have a good evening. Thank you.

9 (Meeting adjourned at 6:48 p.m.)

I hereby certify the accuracy of this record of the proceedings of the SEC Advisory Committee on Improvements to Financial Reporting.

Robert C. Pozen  
Committee Chair

Date

Exhibit A

# **Open Meeting of the SEC Advisory Committee on Improvements to Financial Reporting**

**Laurel Heights Conference Center, Sublevel 1  
Auditorium University of California – San Francisco San  
Francisco, CA**

## **AGENDA**

**Thursday March 13, 2008, Beginning at 3:00 P.M. Pacific Time**

I. Introductory Remarks – Robert Pozen, Committee Chairman

II. Panel One – Restatements and Discussion of Developed Proposals 3.1, 3.2 and 3.3

Participants:

Jack L. Acosta – Sumtotal Systems, Inc. Steven E. Bochner, Wilson Sonsini  
Goodrich & Rosati LLP Manish Goyal – TIAA-CREF John J. Huber – Latham &  
Watkins LLP Steve Meisel – PriceWaterhouseCoopers LLP Elizabeth Mooney –  
The Capital Group Companies Barbara Roper – Consumer Federation of America

III. Panel Two – Professional Judgment and Discussion of Developed Proposal 3.4

Participants:

Jonathan Chadwick – Cisco Randy Fletchall – Ernst and Young LLP Salvatore J.  
Graziano – Bernstein Litowitz Berger & Grossmann LLP John J. Huber – Latham  
& Watkins LLP Dennis Johnson – CALPERS Scott Richardson – Barclay's  
Global Investors Scott Taub – Financial Reporting Advisors

**Friday March 14, 2008, Beginning at 8:00 A.M. Pacific Time**

IV. Panel Three – XBRL and Discussion of Developed Proposal 4.1

Participants:

Steven E. Bochner, Wilson Sonsini Goodrich & Rosati Jeff M. Bodner, Intel Corporation  
Mark Bolgiano, XBRL US Randy G. Fletchall, Ernst & Young LLP Gregory P. Hanson,  
ADVENTRX Pharmaceuticals Christopher Montano, Gridstone Research John Turner,  
CoreFiling

V. Review of Comments Letters Received

VI. Reports from Subcommittees and Discussion:

- 1 Scope
- 2 Deliberations
- 3 Working Hypotheses
- 4 Current Status and Further Work
- 5 Coordination with Other Subcommittees

VII. Next Steps and Future Timetable

VIII. Adjournment (expected no later than 11:00 am)

**Exhibit B**

## **Index of Written Statements Received**

Listed below are the written statements received by the Advisory Committee between its fourth meeting on February 11, 2008 and its fifth meeting on March 13-14, 2008 and the dates of receipt.

Mar. 14, 2008	Gregory P. Hanson, CMA, Senior Vice President and CFO, ADVENTRX Pharmaceuticals, Inc.
Mar. 13, 2008	Henry Siegel, Chairperson of the Financial Reporting Committee, American Academy of Actuaries
Mar. 13, 2008	Scott A. Taub, CPA, Managing Director, Financial Reporting Advisors, LLC
Mar. 13, 2008	Steven E. Bochner, Partner, Wilson Sonsini Goodrich & Rosati
Mar. 13, 2008	Steven E. Bochner, Partner, Wilson Sonsini Goodrich & Rosati
Mar. 13, 2008	Mark Bolgiano, President and CEO, XBRL US, Inc.
Mar. 13, 2008	Jonathan Chadwick, Senior Vice President, Corporate Controller & Principal Accounting Officer, Cisco Systems
Mar. 13, 2008	Dennis A. Johnson, CFA, Senior Portfolio Manager-Corporate Governance, Investment Office
Mar. 13, 2008	Elizabeth F. Mooney, Analyst, The Capital Group Companies
Mar. 13, 2008	H. Stephen Meisel, Partner, PricewaterhouseCoopers
Mar. 12, 2008	John J. Huber, Latham and Watkins LLP
Mar. 11, 2008	Gilbert F. Viets, Indianapolis, Indiana
Mar. 10, 2008	Salvatore J. Graziano, Bernstein Litowitz Berger & Grossmann LLP
Mar. 3, 2008	Paul Snijders, CEO, Zoetermeer, Netherlands
Mar. 2, 2008	Lawrence A. Cunningham, Professor, George Washington University, Washington, District of Columbia
Feb. 19, 2008	Ilia D. Dichev, Associate Professor of Accounting, Ross School of Business at the University of Michigan
Feb. 19, 2008	John S. Ferguson

Feb. 13, 2008

Ad Hoc Materiality Task Force
