

I concur with the draft from Part-15 in regards to the 3650-3700 Mhz Licensing proposed by Motorola. I believe Motorola's reasoning is unfounded and repressive to WISP's nationwide. We have filled a niche that big business wouldn't touch and now large corporate interests and their partners are trying to corner segments of the market by whatever means and manipulation necessary. E.g. Motorola and Sprint's WiMax. This playing field needs to be fairly leveled.

partnership.
