epa docket 2007-0262 frl 8300-9

attention aaron levy, nikhil mallampalli, colwell cook and eliza rim
alleged "protection" of ozone - methyl bromide poison continuing to be used by profiteers

this poisonous toxic chemical needs to be phased out. we need to ban its use totally and not allow these alleged "critical" exemptions for profiteers too lazy to move to less poisonous solutions.

these exemptions harm every person in this world.

epa has been allowing these exemptions for the past 20 years or more. it is time to get serious and take action. epa is so in the pocket of profiteers that they care

not about what is done to all people on earth, just the profiteers. how absolutely disgusting this is.

asking for this in 2007 for a 2009 use shows that these profiteers are too lazy and too stupid to make the changes necessary for mankind to continue to exist in this world. we dont need to encourage this kind of stupid, lazy use.
