Correction to Methenamine Hippurate (Implement by 3/5/02)

The November 20, 2001 publication incorrectly listed the product Methenamine Hippurate 1 gm tablets as having a FUL when it should have listed Methenamine Mandelate 1 gm tablets. Methenamine Hippurate should be deleted from the FUL publication and Methenamine Mandelate should replace it with a FUL of 0.2923.

Timolol Maleate – CLARIFICATION (Published 9/28/04)

Timolol Maleate 0.5% Ophthalmic Solution currently has a FUL of 0.9000. It has recently come to our attention that Ista Pharmaceuticals has received FDA-approval for Istalol, which is their version of Timolol Maleate 0.5% Ophthalmic Solution. The FDA has determined that Istalol is not therapeutically equivalent to the other versions of Timolol Maleate 0.5% Ophthalmic Solution that are currently on the market. Therefore, the FUL of 0.9000 does not apply to Istalol. However, the FUL does continue to apply to all other versions of Timolol Maleate 0.5% Ophthalmic Solution.

Retraction of Hydrochlorothiazide; Quinapril Hydrochloride (Published 05/06/05)

In the memo of FUL changes that was released on 04/08/05, three strengths (12.5mg; 10 mg, 12.5 mg; 20 mg, and 25 mg; 20 mg) of Hydrochlorothiazide; Quinapril Hydrochloride were added to the FUL. Since then it has come to our attention that this FUL was established erroneously through a systems error and this drug, in all three strengths does not, at this time meet the criteria for a FUL. Therefore, CMS is retracting this drug from this FUL update. This drug listing can be found under the “Deleted Drugs” category at this time, effective immediately.
