Kiel, Germany

Overview

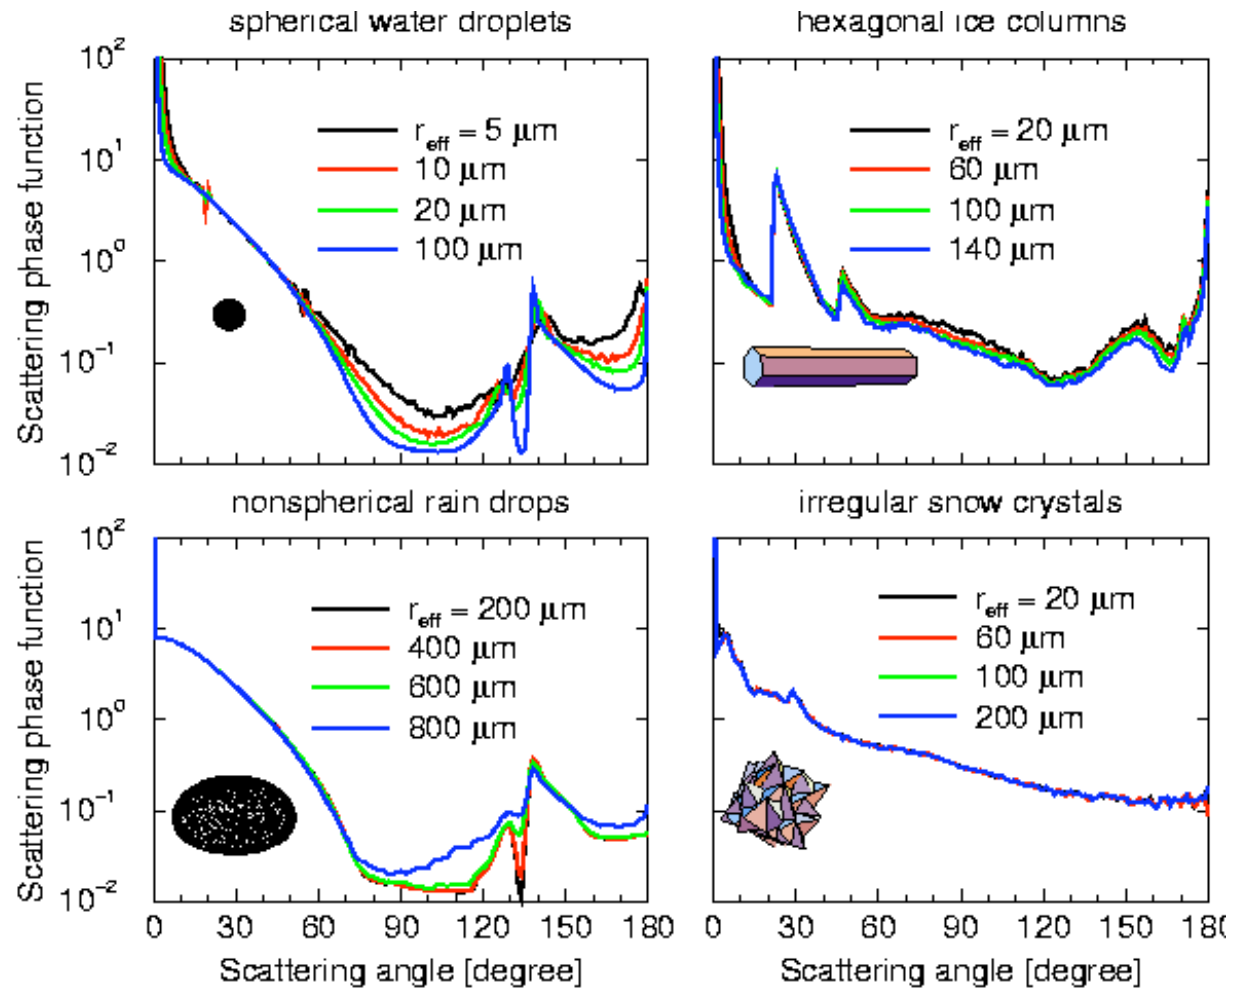

❑ **Single scattering codes (geometric optics)**

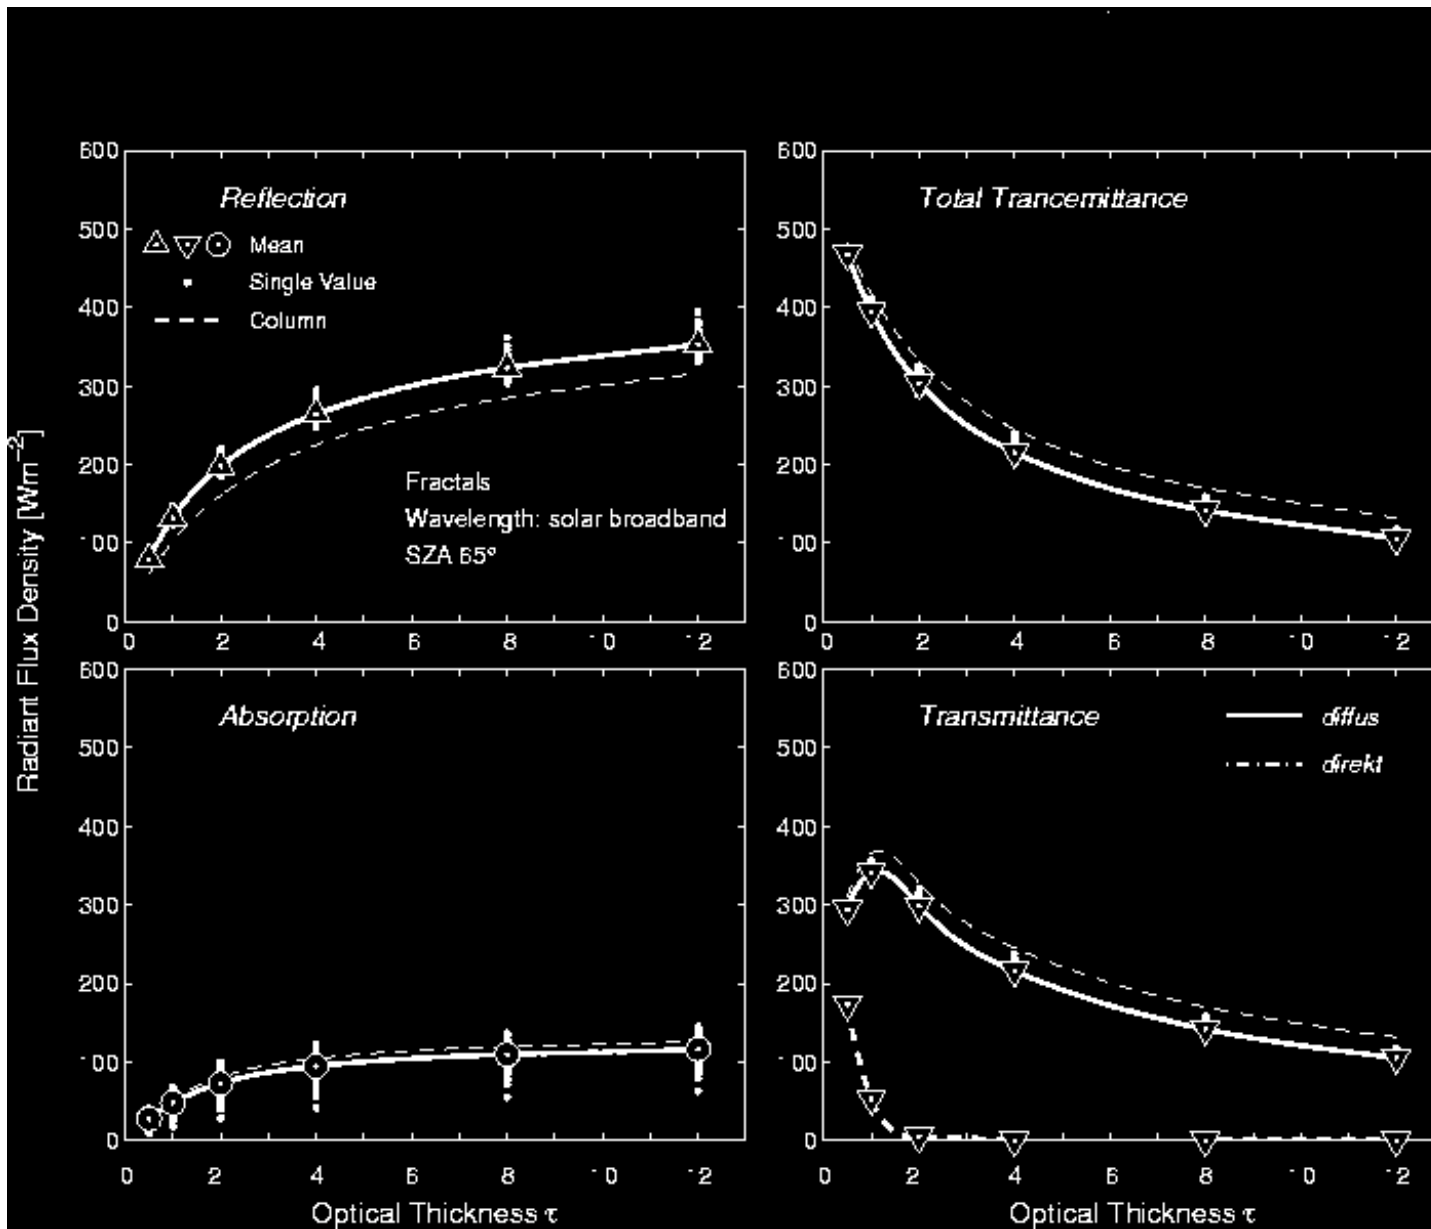

- ❑ **rt.f90**: ray-tracing at randomly oriented polyhedral particle
- ❑ **rt-2d.f90**: same for horizontal or partly tilted particle orientation
- ❑ **rt-mc.f90**: as rt.f90 with internal scattering/absorbing inclusions
- ❑ **rt-ellipsoid.f90**: ray-tracing at randomly oriented ellipsoid
- ❑ **rt-raindrop.f90**: ray-tracing at rotational symmetric particle defined by Chebychef polynomial expansion

❑ **Radiative transfer codes (Monte-Carlo)**

- ❑ **mc-unik.f90**: forward Monte-Carlo, estimate for radiance calc.
- ❑ **GRIMALDI**: MC package incl. documentation, gas abs., scattering library
- ❑ **3rad-unik**: MC package for 3d microwave and thermal radiative transfer

Scattering phase functions

Complete MC package (GRIMALDI)

- forward scheme to solve radiative transfer in 3d scattering and absorbing atmosphere with directed (solar) illumination
- **preprocessor for absorption properties of atmospheric gases**
- monochromatic and **spectral band fluxes** and radiances for finite sized angular bins
- photon path length pdf for finite sized angular bins
- data base for scattering phase functions and single scattering albedos for spherical and non-spherical cloud particles

Forward Local Estimate MC (MC-UNIK)

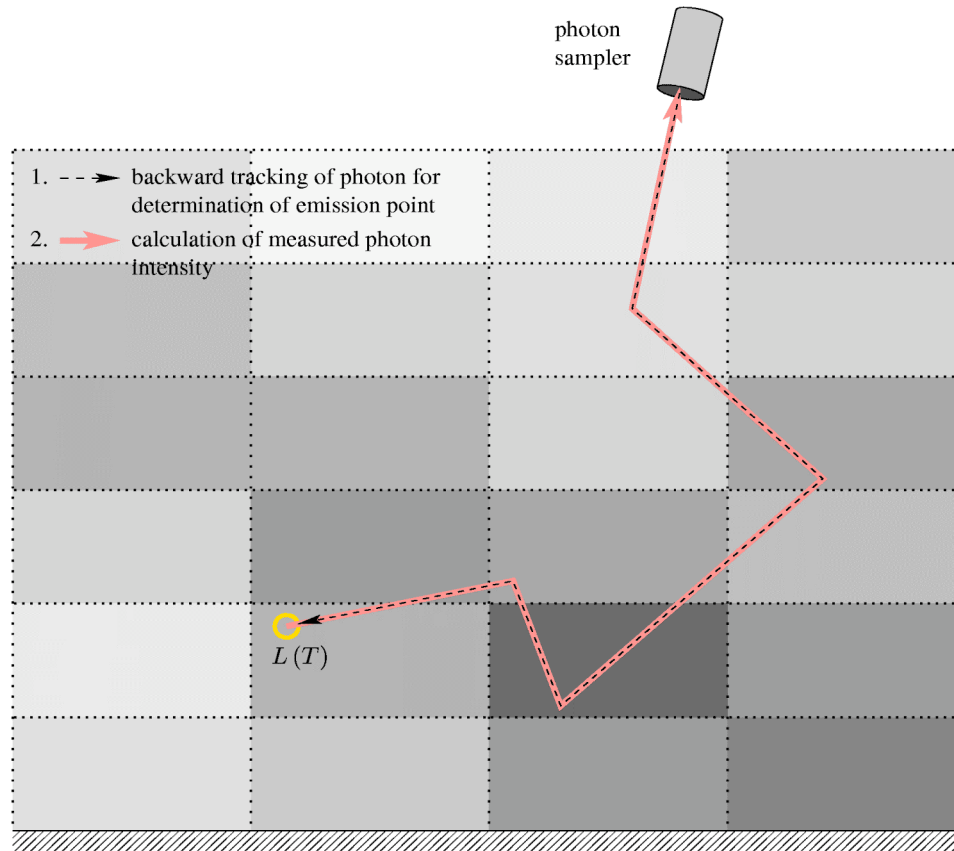

- forward scheme to solve radiative transfer in 3d scattering and absorbing atmosphere with directed (solar) illumination
- **monochromatic fluxes and radiances for discrete directions (Local Estimate scheme)**
- data base for scattering phase functions and single scattering albedos for spherical and non-spherical cloud particles

Backward Local Estimate MC (MC-UNIK-BW)

- backward scheme to solve radiative transfer in 3d scattering and absorbing atmosphere with directed (solar) illumination
- monochromatic radiances for discrete directions (Local Estimate scheme)
- **photon pathlength pdf for predefined viewing geometries and viewing locations**
- data base for scattering phase functions and single scattering albedos for spherical and non-spherical cloud particles

Backward MC (3RAD-UNIK)

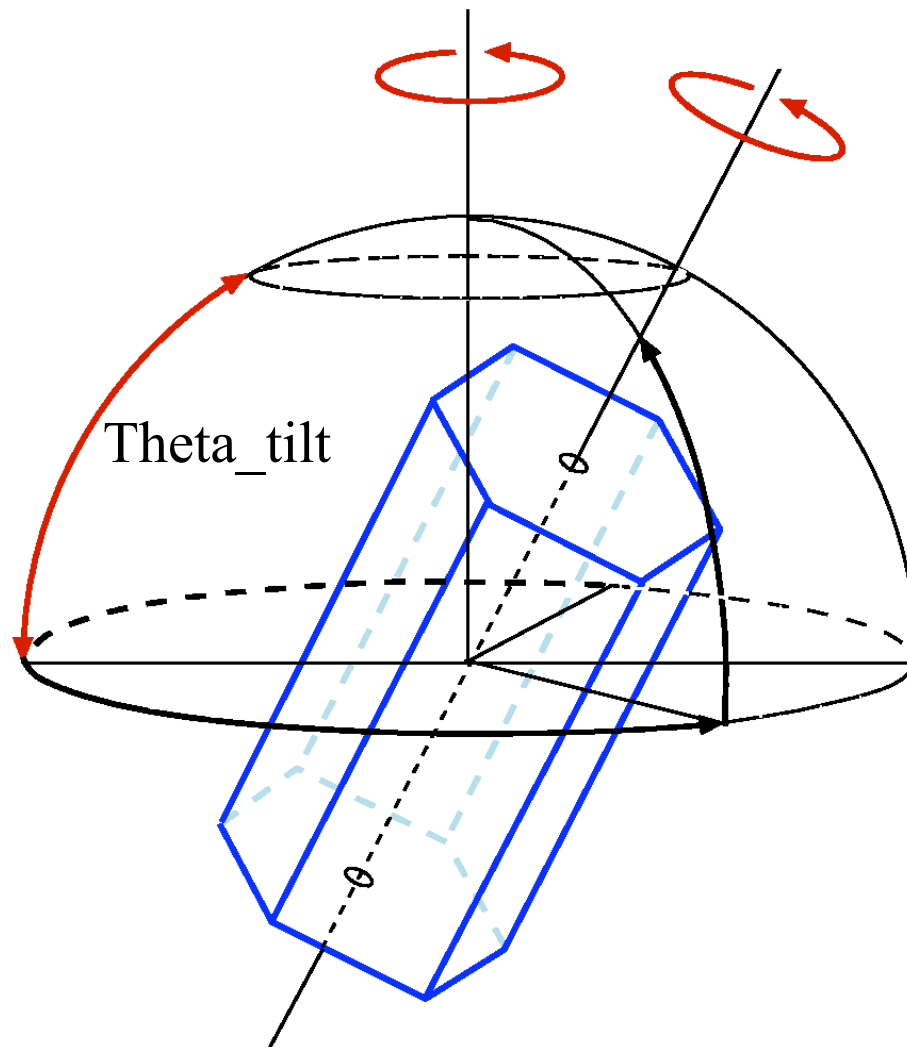

- backward scheme to solve radiative transfer in 3d scattering, absorbing and **emitting** atmosphere
- monochromatic radiances for discrete directions
- **preprocessor for gas absorption from the thermal to the microwave**
- data base for scattering phase functions and single scattering albedos for spherical cloud particles
