

# Food Commodity Intake Database (FCID)

## ● What is the FCID?

Available on CD-ROM, the FCID was developed using intake data from the [Continuing Survey of Food Intakes by Individuals \(CSFII\) 1994-96, 1998](#). It does not replace the CSFII 1994-96, 1998 CD-ROM. Instead, it serves as a companion data set in which intakes are presented in terms of food commodities rather than foods as consumed (for example, as wheat flour and whole egg rather than as noodles). Two days of food intake data plus a 2-day average intake are included in the FCID for approximately 21,700 individuals, including 11,800 children from birth through 19 years of age. Commodity intakes are expressed as grams consumed per kilogram of body weight per day. The commodities (over 500) are those listed by the [U.S. Environmental Protection Agency](#) (EPA) in their Food Commodity Master List of June 15, 2000.

The FCID was developed jointly by the Environmental Protection Agency and the Agricultural Research Service and was designed for assessment of dietary exposures to pesticide residues. In addition to commodity intake data, the CD-ROM includes documentation about development of the database and a "Food Code-to-Commodity Translation File," which maps each CSFII food code to one or more EPA food commodities.

## ● Availability

The FCID and CSFII 1994-96, 1998 CD-ROMs are available from the National Technical Information Service (NTIS).

- FCID -- **NTIS accession number PB2000-500101**
- CSFII 1994-96, 1998 -- **NTIS accession number PB2000-500027**

NTIS may be contacted at 5285 Port Royal Road, Springfield, VA 22161; phone 1-800-553-6847 or (703) 605-6000. On the [NTIS website](#), you may enter the accession number for a CD-ROM into the search window *without punctuation or spaces*. For example, the accession number for the FCID CD-ROM should be entered as follows:

PB2000500101

---

*Last modification date: January 15, 2004*
