List of Tables

1 Selected key parameters of the CEBAF 12 GeV Upgrade 25

2 Comparison of the figure of merit for large x_{Bj} measurements of the A_1^n structure function at HERA, SLAC, and JLab. 59

3 The values of nuclear transparencies for ψ propagation 101

4 Experimental resolutions, σ, of important physics variables in the charm experiments possible at JLab 102

5 A comparison of the experimental options to study charm at JLab 103

6 Selected key parameters of the CEBAF 12 GeV Upgrade 126

7 Summary of major Upgrade items 130

8 Key parameters of the present CEBAF accelerator 132

9 CEBAF linac parameters: 4 GeV vs. 12 GeV 134

10 Components for an 8 kW rf power zone 144

11 Unnormalized rms transverse emittances and momentum spreads for a $5\frac{1}{2}$-pass, 12 GeV CEBAF. 146

12 Summary of magnet changes needed to upgrade existing beam lines. 152

13 Major box supplies required for 12 GeV 155

14 Increased LCW cooling requirements for magnets and power supplies 156

15 Upgraded CHL refrigeration capacities 160

16 Linac heat loads 160

17 LCW system parameters 162

18 Instrumentation requirements for experiments needing a large-acceptance detector. . 167

19 Major design specifications for the Hall A large-acceptance spectrometer 168

20 Performance parameters of the MAD spectrometer 169

21 Magnet properties 172

22 Large-aperture superconducting magnets 175

23 Comparison of Pb-glass, PbF_2, and $PbWO_4$ properties. 181

24 Some properties of tritium gas and liquid targets. 183

25 CLAS upgrade plans: design goals 193

26 CLAS upgrade plans: design choices 194

27 CLAS upgrade plans: new detector elements 199

28 CLAS upgrade plans: expected performance 201

29 The basic parameters of the SHMS; resolutions are quoted for 2.5 GeV/c electrons. . 212

30 Basic parameters of the combined-function dipole for the SHMS. 215

31 Main characteristics of the SHMS superconducting quadrupoles. 215

32 The SHMS detector elements and interested institutions. 218

33 Operating parameters for an experiment using the coherent bremsstrahlung beam. . 234

34 Rates, sizes, and processing requirements for the level 3 trigger 235
