

Statistics of Communications Common Carriers

2005/2006 Edition

**Federal Communications Commission
Washington, DC 20554**

Statistics of Communications Common Carriers

Introduction and Overview

The *Statistics of Communications Common Carriers (SOCC)*, which has been published since 1939, is one of the most widely used reference works in the field of telecommunications. It is the only permanent record of common carrier activity published by the Government Printing Office and sent to repository libraries. The most recent edition may be purchased by mail from the Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954, or by calling GPO's Order and Inquiry Desk at (866) 512-1800.

Sources of Information

Much of the material contained in this volume is available well before the *SOCC* is published by the Government Printing Office.

Internet

The Wireline Competition Bureau has a home page on the World Wide Web. This home page can be accessed directly at www.fcc.gov/wcb/ through a link from the main FCC home page at www.fcc.gov. The materials available include orders, notices of proposed rulemaking, statistical reports, public notices, news releases, fact sheets, and answers to frequently asked questions (FAQs). The Wireline Competition Bureau Statistical Reports web pages include all of the files contained in the *SOCC* and a variety of other reports that are used in the preparation of the *SOCC*. It can be reached directly at www.fcc.gov/wcb/stats/. The annual carrier submissions that are used in developing many of the tables in this publication can also be found at www.fcc.gov/wcb/armis/.

Duplicating Contractors and Reference Information Center

Several private firms specialize in locating, duplicating, and distributing FCC documents. The Commission's current duplicating contractor is Best Copy and Printing, Inc. Documents may be purchased by calling Best Copy and Printing, Inc., 1-800-378-3160, or via e-mail at FCC@bcpiweb.com. Reports and the summaries used in the preparation of the *SOCC* are also available in the FCC's Reference Information Center, located on the Courtyard Level, 445 12th Street S.W., Washington, D.C.

Coverage

Local Telephone Companies

There are approximately 1,300 companies that have historically provided local telephone service in the United States. These companies, often referred to as incumbent local exchange carriers (LECs), range in size from rural cooperatives serving fewer than 100 customers to large holding companies serving millions of telephone lines. In most cases, only larger companies (those with more than \$134 million in annual revenues in 2006) are required to file information with the FCC, and only telephone companies affiliated with the four largest holding companies are required to file the most extensive information. New telephone service providers, referred to as competitive local exchange carriers (CLECs), and providers of wireless telephone service are not required to file detailed statistical data with the Commission.

Statistics of Communications Common Carriers

In 2005 and 2006, as shown in the detailed statistics in Table 2.8, there were 27 reporting large incumbent LECs required to file the ARMIS USOA Report 43-02. In addition to these large carriers, 29 mid-sized incumbent LECs report less detailed data in the ARMIS Annual Summary Report 43-01, and the statistical tabulations based on this report are shown in Tables 2.9 through 2.17. While these 56 companies account for more than 90% of the local telephone lines served by incumbent LECs, they do not reflect a complete census of the industry.

Long Distance Companies

Over 1,100 companies provide long distance telephone service. A limited amount of summary information on the larger long distance companies is contained in various tables throughout the *SOCC*. Among long distance carriers, only AT&T and Alascom, which once were regarded as dominant carriers possessing market power, were ever required to file detailed reports. These data are contained in earlier editions of this publication. The reporting requirements, however, were eliminated when the FCC determined that AT&T was no longer a dominant carrier.

Accounting Standards

A new Uniform System of Accounts (USOA) for the telephone industry became effective at the beginning of 1988. The detailed tables in this report are based on that system. Full Class A reporting requirements are imposed only where the aggregate revenues of an incumbent LEC and its affiliates exceed \$7.950 billion, the inflation-adjusted 2006 revenue threshold. Only AT&T, Qwest, and Verizon remained subject to full Class A reporting requirements in 2006. The results for the 27 carriers affiliated with these firms appear in Table 2.8. The amount of state-by-state information varies from company to company. Ameritech, now a subsidiary of AT&T Inc., has historically maintained a separate operating company in each state served and consequently files information for each one. In contrast, Qwest, formerly U S WEST, has consolidated its operations into a single company servicing 14 states, for which it files aggregated information.

The FCC's Phase I Accounting Review Order, 14 FCC Rcd 11396 (1999), established streamlined reporting requirements for mid-sized incumbent LECs beginning in the 1999 reporting year. A mid-sized incumbent LEC is a carrier whose annual operating revenues, either individually or when aggregated with those of any incumbent LEC it controls, is controlled by, or is under common control with, were less than \$7.950 billion in 2006. Summary tabulations for these mid-sized companies are included in Tables 2.9 through 2.17.

The USOA applies to telephone operating companies. It is not designed to capture the activities of parent holding companies or subsidiaries. Where activities have been transferred from telephone companies to holding companies or subsidiaries, the revenues from those activities cease to be reported by the operating companies. For this reason, along with several other differences between financial and regulatory accounting systems, the results contained in reports to the FCC may differ markedly from reports to the Securities and Exchange Commission (SEC).

Timing of the SOCC

Most companies report information for the prior calendar year to stockholders and to the SEC by April 1. At the same time, they provide annual reports on their domestic operations to the FCC. The basic

Statistics of Communications Common Carriers

raw data are made available to the public as soon as they are received. This statistical summary is produced after the data have been checked, inquiries on questionable items sent to the carriers, corrected submissions received, and the industry tables compiled. Unlike data for domestic operations, corrected data for international services are typically not received until at least ten months after the end of the year being reported. Summaries of the international data are usually prepared and released by the end of the year.

Other Information Sources

The United States Telecom Association (USTA), at www.usta.org, represents most incumbent local telephone companies. Like many trade associations, it collects information from each of its members. Annually, it prepares, publishes and sells statistical publications such as *Phone Facts*.

The Cellular Telecommunications & Internet Association (CTIA), at www.ctia.org, represents the wireless industry. Since January 1985, it has conducted a semi-annual wireless survey, which consists of data on the wireless industry including the number of subscribers, revenues, employees, and average local monthly bill.

The Telecommunications Industry Association (TIA), at www.tiaonline.org, represents the information and communications technology industry. TIA publishes annually the *Telecommunications Market Review and Forecast*, which provides most comprehensive study of the industry.

N/A - Not available.

¹ Last consolidated financial statement filed by company is for 9 months ending September 30, 2005.

² Following the merger of SBC Communications Inc. (SBC) with AT&T Corporation (ATTC) on November 18, 2005, SBC changed its name from "SBC Communications Inc." to "AT&T Inc." and began marketing its services and products, and brand names, including Cingular Wireless (AT&T Mobility), as AT&T. Amounts in 2005 reflect results from AT&T Corp. for the 43 days following the November 18, 2005 acquisition. The 2006 figures include all of BellSouth and AT&T Mobility following acquisition of BellSouth in December 2006.

³ Network (switched) access lines.

⁴ Data for MCI Inc. is for 9 months ending September 30, 2005. On February 14, 2005, Verizon announced that it had agreed to acquire MCI for a combination of Verizon's common shares and cash (including MCI's dividends). The merger received the required state, federal and international regulatory approvals by year-end 2005, and on January 6, 2006, Verizon and MCI closed the merger.

⁵ On August 12, 2005, Sprint Corporation acquired Nextel and, as a result, the name of the Corporation was changed from "Sprint Corporation" to "Sprint Nextel Corporation." Consolidated financial statements included financial results of all acquisitions in 2005, particularly Nextel's.

⁶ As of February 28, 2006.

⁷ On October 28, 2005, McLeodUSA Inc. filed for bankruptcy relief under Chapter 11 and on January 6, 2006, it emerged from the bankruptcy. Upon emergence, McLeodUSA Inc. adopted fresh start accounting that had a material effect on its financial statements. As a result, the financial statements for periods after January 1, 2006, are not comparable with the financial statements for earlier periods.

⁸ Plus a special cash dividend of \$5.60 per common share paid by MCI on October 27, 2005 after the October 6, 2005 approval of the merger agreement by MCI shareholders.

⁹ On July 17, 2006, Alltel completed its spin-off of its wireline telecommunications business to its stockholders and the merger of that business with Valor Communications Group, Inc. ("Valor"). The new wireline company formed in the merger of Alltel's wireline operations and Valor is named Windstream Corporation ("Windstream"). After the spin-off, Alltel's continuing operations consist of a single reportable business segment, wireless communications services.

Sources: Company annual (Form 10-K) and quarterly (Form 10-Q, 10-Q/A) reports filed at the Securities and Exchange Commission.

1/ Toll revenues consist of carrier's carrier revenues reported on the FCC Form 499-A Lines 310 through 314; end user revenues reported on Lines 411 through 417, and a portion of USF pass-through revenue reported on Line 403.

2/ Filings of affiliated companies have been consolidated to create this table. The annual *Telecommunications Provider Locator* reports are one source of information showing which filers are treated as affiliates. For the purpose of this table, revenues for Cingular were divided between Bell South and SBC in proportion to their ownership interest. Revenues for CellCo Partnership were consolidated with Verizon.

Source: Data filed on FCC Form 499A and press reports. See also: Industry Analysis and Technology Division, Wireline Competition Bureau, *Telecommunications Provider Locator* (March 2006) available at <http://www.fcc.gov/wcb/stats>.

* In some cases, the headquarters listed is for the parent company. See Table 1.2 for the intercorporate relations of wireline affiliate of subject local exchange carriers.

@ Some of the companies included non-toll revenues in their annual filings pursuant to section 43.21(c) of the Commission's rules.

Includes plant under construction. Figures may also include plant used by some carriers to provide communications services other than long distance toll. See also footnotes to Table 1.2.

¹ Company is basically a reseller; therefore, it reported little or no communications plant.

² Company requested confidential treatment.

³ Revenues exclude \$105.3 million from non-communications operations; plant excludes \$80.1 million.

Statistics of Communications Common Carriers

Notes for Tables 2.2 through 2.5 (2005)

Data for Tables 2.2 through 2.5 were obtained from annual ARMIS (Automated Reporting Management Information System) operating data reports (FCC Report 43-08) of reporting incumbent local exchange carriers. ARMIS Report 43-08 definitions and carrier data can be accessed at www.fcc.gov/wcb/armis/

See Table 2.6 for data of individual carriers. Certain data pertaining to the carriers are unavailable.

Totals by state for some items may be understated because of incomplete data.

Detailed values may not match totals because of necessary rounding.

Changes to Companies during Year 2005

On May 2, 2005, Hawaiian Telecommunications, Inc. (Hawaiian Telcom) began operations when its parent, The Carlyle Group (a private investment firm), bought Verizon Hawaii, Inc. from Verizon Communications. Hawaiian Telcom will remain a holding company/operating company with one study area, Hawaii. In addition, Hawaiian Telcom is re-classified as a mid-sized elective price-cap incumbent LEC, which requires it to file the ARMIS Summary (43-01), Service Quality (43-05), and Operating (43-08) Reports. However, due to the time when the sale was finalized, Hawaiian Telcom began reporting ARMIS data for the calendar-year 2006.

On August 12, 2005, Sprint Corporation merged with Nextel and, as a result, the name of the Corporation was changed from "Sprint Corporation" to "Sprint Nextel Corporation." At the time of the merger, Sprint also announced that it intended to spin-off its local communication business into a local segment that will be known as Embarq Corporation. The new name "Embarq" was used to file the ARMIS 43-08 Report for a couple of local companies in 2005.

Following the merger of SBC Communications Inc. (SBC) and AT&T Corp. (ATTC) on November 18, 2005, SBC changed its name from "SBC Communications Inc." to "AT&T Inc." and began marketing its products, services and brand names, including Cingular Wireless (Cingular), as AT&T. Also, while the merger between AT&T Inc. and BellSouth Corp. was completed the following year, the ARMIS 43-08 (Operating Data) Report for BellSouth Corp. was filed as "AT&T/BellSouth Corporation" for the year 2005.

On December 9, 2005, Alltel announced that its board of directors had approved the spin-off of its wireline telecommunications business and the merger of that wireline business with Valor Communications Group, Inc. The new wireline company in the merger of Alltel's wireline operations and Valor was named Windstream Corporation in 2006. The latter name was used to file the ARMIS 43-08 Report for the wireline companies in 2005.

CenturyTel of Missouri filed the ARMIS 43-01 (Annual Summary) and the ARMIS 43-08 (Operating Data) Reports for four study areas and the operating company for the first time.

Citizens Telecommunications Company of California (CTCC) has reached the revenue threshold, again. (Note: This operating company fell below the threshold in 1995.) This requires Citizens to resume filing the ARMIS Summary Report (43-01) for Citizens Telecommunications of California/Shasta (CUCA), and the ARMIS Operating Data Report (43-08) for CTCC. Citizens will continue filing the ARMIS Service Quality (43-05) Report for CUCA.

Outside Plant Statistics

Unless otherwise stated, data include local loops and interoffice facilities. A cable containing only copper, coaxial, or other metallic conductors is classified as metallic, but a cable containing both fiber and copper, coaxial or other metallic conductors is classified as fiber.

Kilometers equal total miles multiplied by 1.6093 and then rounded to the nearest whole number. Non-zero entries in the ARMIS reports of less than 1 kilometer are reported as 1 kilometer.

Equivalent number of poles is the number of solely-owned poles plus the sum of the products of the numbers of jointly-owned poles times their ownership percentages.

Kilometers of telephone channel are the number of equivalent analog or digital telephone circuit kilometers that are equipped and on radio systems above 890 MHz.

Total equipped local loop circuit kilometers are the number of total equivalent voice-grade circuit kilometers in local plant.

Access Lines

Switched access lines connect end-user customers with their end office for switched services. They are classified as analog or digital depending on the type of service. Switched access lines include 800 and 800-like access lines, resold telephone exchange service lines, employee concession lines, but not official/company circuits. They do not include the closed end of WATS, FX, and special access lines. Main access lines include analog switched access lines provided over 4kHz or equivalent facilities, that connect to residential, single and multiline business telephones excluding PBX Trunks, Centrex-CO lines, Centrex-CU Trunks, and Hotel/Motel LD Trunks. Digital switched lines are switched access lines providing 64 kbps or equivalent, that terminate at the customer end as digital lines or be available for use by the customer as digital lines. Digital switched lines can transmit voice and data going into the customer location or PBX. Other switched access lines and total switched access lines include resold telephone exchange service lines. Special access lines connect an

Statistics of Communications Common Carriers

Notes for Tables 2.2 through 2.5 -- Continued

Access Lines - continued

end user's premises to an interexchange carrier or other access customer point of presence. Local private lines originate and terminate within the same LATA.

Central office switches are assemblies of equipment and software designed to establish connections among lines and between lines and trunks, including access tandems, local, class 5 switching machines and associated remote switching machines.

Figures for switched access lines reported in the ARMIS Report 43-08 for some companies are slightly different from figures for billable figures for billable access lines reported in the annual summary report (ARMIS Report 43-01) for a variety of reasons, including different reporting requirements, the interpretation of those requirements by the various companies, and the methods different companies use to calculate the number of lines. The majority of the differences come from the fact that derived ISDN channels are included in the count of derived ISDN channels are included in the count of switched access lines in the ARMIS Report 43-08, but are not treated as billable access lines in the ARMIS Report 43-01.

Telephone Calls and Minutes

Local calls are the number of originating calls completed or unanswered between points both of which are within the local service area of the calling telephone, or total originating calls minus total originating toll calls. The number of completed toll calls include calls directed to a point outside the local service area of the calling telephone. The number of toll calls is based on originating message volumes and includes outward calls, 800 and 800-like service, directory service, dial-it services (e.g., 900 service), and optional calling plans. IntraLATA toll calls are carried by the reporting local operating company within a given Local Access and Transport Area (LATA). InterLATA toll calls are directed to and carried by interexchange carriers. Billed access minutes are based on bills sent to interexchange carriers and include total originating and terminating minutes-of-use, including call set-up time, holding time, and conversation time.

Name of Company	Code
AT&T Inc.	AT&T
Qwest Corporation	Q
Verizon Communications Inc.	VZ
Embarq Corporation	EQ
Windstream Corporation	WIN

Source: Annual ARMIS (Automated Reporting Management Information System) operating data reports (ARMIS Report 43-08) of reporting incumbent local exchange carriers (ILECs). ARMIS Report 43-08 definitions and carrier data can be accessed at www.fcc.gov/wcb/armis/.

Note -- Certain data pertaining to the carriers included in this table are unavailable.

- Detail may not match totals because of necessary rounding.
- Unless otherwise stated, outside plant statistics include local loop and interoffice facilities. A cable containing only copper, coaxial or other metallic conductors is classified as metallic, but a cable containing both fiber and copper, coaxial or other metallic conductors is classified as fiber.
- Kilometers equal total miles multiplied by 1.6093 and then rounded to the nearest whole number. Non-zero entries in the ARMIS reports of less than 1 kilometer are reported as 1 kilometer.
- Equivalent number of poles is the number of solely-owned poles plus the sum of the products of the numbers of jointly-owned poles times their ownership percentages.
- Access lines include 800 and 800-like access lines, resold telephone exchange service lines, and employee concession lines, but do not include official/company circuits. Analog access lines are shown in 4kHz equivalents and include access lines from digital switches if the access lines are not terminated at the customer's premises as digital lines. ISDN and other digital access lines are shown in 64 kbps equivalents. To be classified as digital, the access lines must be terminated at the customer end as digital lines or be available for use by the customer as digital lines.
- Other switched access lines and total switched access lines include resold telephone exchange service lines.
- Figures for switched access lines reported in the ARMIS Report 43-08 report differ slightly from figures reported for billable access in the ARMIS Report 43-01. There are several reasons for this, including different reporting requirements, the interpretation of these requirements by various companies, and the methods different companies use to calculate the lines. The majority of the differences come from the fact that 800 and 800-like lines and derived ISDN channels are included in the count of switched access lines in the ARMIS 43-08, but are not treated as billable access lines in the ARMIS Report 43-01.
- The number of toll calls is based on completed originating message volumes and includes outward calls, 800 and 800-like service, directory service, dial-it services (e.g., 900 service), and optional calling plans. Completed intraLATA toll calls are carried by the reporting local operating company within a given Local Access and Transport Area (LATA). Completed interLATA toll calls are directed to and carried by interexchange carriers. Billed access minutes are based on bills sent to interexchange carriers and include total originating and terminating access minutes of use, including call set-up time, holding time, and conversation time.

Statistics of Communications Common Carriers
Table 2.7 - Communications Plant of Reporting Large Incumbent Local Exchange Carriers
as of December 31, 2005
(Amounts Shown in Thousands)

Acct No.	Items	Reporting Large Incumbent Local Exchange Companies (RBOCs)

Statistics of Communications Common Carriers

Notes for Table 2.8. (2005)

Source: Annual ARMIS (Automated Reporting Management Information System) USOA Reports (FCC Report 43-02), Table B-1.

Note: Detail may not match totals because of necessary roundings.

-- In the account number column, four-digit numbers are used when there is a corresponding account number in the Uniform System of Accounts (USOA). Three-digit numbers correspond to items defined in the ARMIS USOA report (FCC Report 43-02). Information on the accounts can be found in 47 C.F.R. part 32 which can be accessed on the Internet at www.fcc.gov/wcb/iatd/47cfr.html.

-- Individual carrier ARMIS 43-02 filing instructions, forms, data as well as footnotes can be found on the Internet at www.fcc.gov/wcb/armis.

Code letters are shown above the name of each company owned or controlled by a holding company as of December 31, 2005.

Name of Company	Code
AT&T Inc.	AT&T
Qwest Communications International, Inc.	Q
Verizon Communications Inc.	VZ

Company Notes

Notes and footnotes submitted by individual carrier with the ARMIS 43-02 filing explaining any differences between the current and past data can be found in the "Preset Reports" on the Internet at www.fcc.gov/wcb/armis.

Statistics of Communications Common Carriers

Notes for Tables 2.9 through 2.17 (2005)

NA - Not Applicable.

Data for these tables were obtained from the ARMIS (Automated Reporting Management Information System) reports (ARMIS Report 43-01) filed by incumbent local exchange companies with operating revenues for the year 2005 equal to or in excess of \$129 million. The FCC's Phase 1 Accounting Review Order, 14 Rcd 11396 (1999), established streamlined reporting requirements for mid-sized incumbent local exchange carriers (ILECs) beginning in the 1999 reporting year. A mid-sized carrier is a carrier whose annual operating revenues either individually or when aggregated with those of any ILEC it controls, is controlled by, or which it is under common control, are less than \$7.668 billion.

Individual carrier ARMIS Report 43-01 filing instructions, forms, data as well as footnotes can be found on the Internet at www.fcc.gov/wcb/armis/.

The reports are filed on a study-area basis and include financial and operational data on revenues, expenses, investment, access lines and minutes of use.

Information presented in these tables was received from 13 companies for 196 study areas representing 48 states (excluding Alaska and Hawaii) plus the District of Columbia and the Commonwealth of Puerto Rico. Data for all tables are obtained from the 2005 calendar-year submissions by the companies.

Detail may not match totals because of necessary rounding.

Detail and totals shown may not match detail or totals shown elsewhere in this publication or from sources with similar data and element names for these reasons:

1. Some companies may interpret the Commission's instructions differently.
2. Some companies may use different internal databases to compile data for different ARMIS reports.
3. Some companies may discover discrepancies in their data and refile data for one ARMIS report but not for others.

Both the Commission's and company's personnel are working to detect and correct discrepancies in the data and to clarify the reporting requirements.

The thirteen companies or groups of companies that filed ARMIS 43-01 data from which these tables were derived are:

7. Commonwealth Telephone Company
8. Embarq Corporation (EQ)
9. SureWest Telephone
10. Windstream Corporation (WIN)

Statistics of Communications Common Carriers

Notes for Tables 2.9 through 2.17 (2005) - Continued

Financial Data

The total column reflects the operating results for each of the rows itemized in these tables, and it includes all regulated and non-regulated company operations for each row. These amounts are presented prior to separation between state and interstate jurisdictions.

Subtracting all non-regulated and adjustments from the total column gives the subject-to-separations column, which reflects that portion of each row that must be allocated between state and interstate jurisdictions pursuant to part 36 of the Commission's rules.

The state and interstate columns reflect the allocation of the amount in the subject-to-separations column into its state and interstate components pursuant to those rules. In some instances, the interstate column also reflects Commission-prescribed adjustments made after the separations process. These adjustments are made only at the interstate level; consequently, the state and interstate columns may not necessarily add up to the subject-to-separations column.

All the remaining columns concern the further sub-division of the interstate column's amount into its various components pursuant to part 69 of the Commission's rules.

The common access line columns reflect costs that are recovered through subscriber's common line charge and carrier's common line charge that are assessed on all inter-exchange carriers that use local exchange common line facilities for the provision of interstate or foreign telecommunications services.

The traffic-sensitive access columns reflect costs that are associated with the traffic-sensitive plant engineered to handle the anticipated volume of calls. The switching column reflects that portion of each row that is associated with the connection of toll lines to toll lines, or toll lines to local central offices, exclusive of separate equal access costs, if the exchange carrier has a separate equal access component. The transport column reflects that portion of each line item that is applicable to charges that are assessed on all inter-exchange carriers who use switching or transport facilities that are apportioned to the transport element or elements for purposes of apportioning net investment. The total traffic-sensitive column reflects those amounts that are assigned to the traffic-sensitive element and sub-elements pursuant to part 69 of the Commission's rules. (The total traffic-sensitive column equals the total of the switching column plus the transport column plus the traffic-sensitive information. The latter are charges that are assessed on all inter-exchange carriers who are connected to the assistance boards through the inter-exchange carriers' directory assistance trunks.)

The special access column reflects that portion of each row applicable to the total of all sub-elements that have been established for the use of equipment or facilities assigned to the special access element for purposes of apportioning net investment pursuant to part 69 of the Commission's rules.

The total access column reflects the sum of the common line access column, the traffic-sensitive access column, and the special access column.

The billing and collection column reflects that portion of each row applicable to billing and collection services.

The interexchange column reflects that portion of each row applicable to interexchange services.

The mid-sized ILECs do not file rows 1410, 1420, 1490, and 1590 for taxes, but do file row 1595, federal, state, and other taxes. These are reflected in Tables 2.9, 2.10, and 2.13.

Statistics of Communications Common Carriers

Notes for Tables 2.9 through 2.17 (2005) - Continued

Billable Access Lines

Billable access lines are access lines that are billed either the end-user common line charge (EUCL) or the special access surcharge. Billable access lines as reported in the ARMIS Report 43-01 will differ slightly from switched access lines as reported in the ARMIS Report 43-08. There are several reasons for this, including different reporting requirements, the interpretation of those requirements by various companies, and the methods different companies use to calculate the number of lines. The majority of the differences come from the fact that 800 and "800 like" access lines and derived ISDN channels are not treated as billable access lines in the ARMIS Report 43-01, but are included in the count of access lines in the ARMIS Report 43-08.

For terms and definitions of the billable access lines' columns in the table, see 47 CFR § 54.401(a), and § 69.114, respectively, which can be found on the Internet at www.fcc.gov/wcb/iatd/47cfr.html.

Company Notes

Notes and footnotes submitted by individual carrier with the ARMIS 43-01 filing explaining any differences in the current data compared with the past can be found in the "Preset Reports" on the Internet at www.fcc.gov/wcb/eafs.

Traffic-Sensitive Minutes of Use

Total premium traffic-sensitive Minutes-of-Use (MOU) are calculated using premium local switching revenues and the appropriate rates. MOU are calculated pursuant to § 69.205. All resellers' minutes are included.

Total non-premium traffic-sensitive MOU are calculated using non-premium local switching revenues and the appropriate rates. MOU are calculated pursuant to § 69.113.

Statistics of Communications Common Carriers

Notes for Tables 2.2 through 2.5 (2006)

Data for Tables 2.2 through 2.5 were obtained from annual ARMIS (Automated Reporting Management Information System) operating data reports (FCC Report 43-08) of reporting incumbent local exchange carriers. ARMIS Report 43-08 definitions and carrier data can be accessed at www.fcc.gov/wcb/armis/.

See Table 2.6 for data of individual carriers. Certain data pertaining to the carriers are unavailable.

Totals by state for some items may be understated because of incomplete data.

Detailed values may not match totals because of necessary rounding.

Changes to Companies during Year 2006

On May 17, 2006, Sprint Nextel Corporation completed the spin-off of its local communications business to Embarq Corporation ("EQ").

On July 17, 2006, Alltel completed the spin-off of its wireline telecommunications business to its stockholders and the merger of that wireline business with Valor Communications Group, Inc. ("Valor"). The spin-off included the majority of Alltel's communications support services, including directory publishing, information technology outsourcing services, retail long-distance and the wireline sales portion of communications products. The new wireline company formed in the merger of Alltel's wireline operations and Valor is named Windstream Corporation ("Windstream").

On December 29, 2006, AT&T Inc. (formerly SBC Communications) acquired BellSouth Corporation and its 40 percent economic interest in AT&T Mobility LLC (formerly Cingular Wireless LLC).

Outside Plant Statistics

Unless otherwise stated, data include local loops and interoffice facilities. A cable containing only copper, coaxial, or other metallic conductors is classified as metallic, but a cable containing both fiber and copper, coaxial or other metallic conductors is classified as fiber.

Kilometers equal total miles multiplied by 1.6093 and then rounded to the nearest whole number. Non-zero entries in the ARMIS reports of less than 1 kilometer are reported as 1 kilometer.

Equivalent number of poles is the number of solely-owned poles plus the sum of the products of the numbers of jointly-owned poles times their ownership percentages.

Kilometers of telephone channel are the number of equivalent analog or digital telephone circuit kilometers that are equipped and on radio systems above 890 MHz.

Total equipped local loop circuit kilometers are the number of total equivalent voice-grade circuit kilometers in local plant.

Access Lines

Switched access lines connect end-user customers with their end office for switched services. They are classified as analog or digital depending on the type of service. Switched access lines include 800 and 800-like access lines, resold telephone exchange service lines, employee concession lines, but not official/company circuits. They do not include the closed end of WATS, FX, and special access lines. Main access lines include analog switched access lines provided over 4kHz or equivalent facilities, that connect to residential, single and multiline business telephones excluding PBX Trunks, Centrex-CO lines, Centrex-CU Trunks, and Hotel/Motel LD Trunks. Digital switched lines are switched access lines providing 64 kbps or equivalent, that terminate at the customer end as digital lines or be available for use by the customer as digital lines. Digital switched lines can transmit voice and data going into the customer location or PBX. Other switched access lines and total switched access lines include resold telephone exchange service lines. Special access lines connect an

Statistics of Communications Common Carriers

Notes for Tables 2.2 through 2.5 (2006) -- Continued

Access Lines - continued

end user's premises to an interexchange carrier or other access customer point of presence. Local private lines originate and terminate within the same LATA.

Central office switches are assemblies of equipment and software designed to establish connections among lines and between lines and trunks, including access tandems, local, class 5 switching machines and associated remote switching machines.

Figures for switched access lines reported in the ARMIS Report 43-08 for some companies are slightly different from figures for billable figures for billable access lines reported in the annual summary report (ARMIS Report 43-01) for a variety of reasons, including different reporting requirements, the interpretation of those requirements by the various companies, and the methods different companies use to calculate the number of lines. The majority of the differences come from the fact that derived ISDN channels are included in the count of derived ISDN channels are included in the count of switched access lines in the ARMIS Report 43-08, but are not treated as billable access lines in the ARMIS Report 43-01.

Telephone Calls and Minutes

Local calls are the number of originating calls completed or unanswered between points both of which are within the local service area of the calling telephone, or total originating calls minus total originating toll calls. The number of completed toll calls include calls directed to a point outside the local service area of the calling telephone. The number of toll calls is based on originating message volumes and includes outward calls, 800 and 800-like service, directory service, dial-it services (e.g., 900 service), and optional calling plans. IntraLATA toll calls are carried by the reporting local operating company within a given Local Access and Transport Area (LATA). InterLATA toll calls are directed to and carried by interexchange carriers. Billed access minutes are based on bills sent to interexchange carriers and include total originating and terminating minutes-of-use, including call set-up time, holding time, and conversation time.

Windstream Corporation	WIN

Source: Annual ARMIS (Automated Reporting Management Information System) operating data reports (ARMIS Report 43-08) of reporting incumbent local exchange carriers (ILECs). ARMIS Report 43-08 definitions and carrier data can be accessed at www.fcc.gov/wcb/armis/.

Note -- Certain data pertaining to the carriers included in this table are unavailable.

- Detail may not match totals because of necessary rounding.
- Unless otherwise stated, outside plant statistics include local loop and interoffice facilities. A cable containing only copper, coaxial or other metallic conductors is classified as metallic, but a cable containing both fiber and copper, coaxial or other metallic conductors is classified as fiber.
- Kilometers equal total miles multiplied by 1.6093 and then rounded to the nearest whole number. Non-zero entries in the ARMIS reports of less than 1 kilometer are reported as 1 kilometer.
- Equivalent number of poles is the number of solely-owned poles plus the sum of the products of the numbers of jointly-owned poles times their ownership percentages.
- Access lines include 800 and 800-like access lines, resold telephone exchange service lines, and employee concession lines, but do not include official/company circuits. Analog access lines are shown in 4kHz equivalents and include access lines from digital switches if the access lines are not terminated at the customer's premises as digital lines. ISDN and other digital access lines are shown in 64 kbps equivalents. To be classified as digital, the access lines must be terminated at the customer end as digital lines or be available for use by the customer as digital lines.
- Other switched access lines and total switched access lines include resold telephone exchange service lines.
- Figures for switched access lines reported in the ARMIS Report 43-08 report differ slightly from figures reported for billable access in the ARMIS Report 43-01. There are several reasons for this, including different reporting requirements, the interpretation of these requirements by various companies, and the methods different companies use to calculate the lines. The majority of the differences come from the fact that 800 and 800-like lines and derived ISDN channels are included in the count of switched access lines in the ARMIS 43-08, but are not treated as billable access lines in the ARMIS Report 43-01.
- The number of toll calls is based on completed originating message volumes and includes outward calls, 800 and 800-like service, directory service, dial-it services (e.g., 900 service), and optional calling plans. Completed intraLATA toll calls are carried by the reporting local operating company within a given Local Access and Transport Area (LATA). Completed interLATA toll calls are directed to and carried by interexchange carriers. Billed access minutes are based on bills sent to interexchange carriers and include total originating and terminating access minutes of use, including call set-up time, holding time, and conversation time.

Statistics of Communications Common Carriers

Notes for Table 2.8 (2006)

Source: Annual ARMIS (Automated Reporting Management Information System) USOA Reports (FCC Report 43-02), Table B-1.

Note: Detail may not match totals because of necessary roundings.

-- In the account number column, four-digit numbers are used when there is a corresponding account number in the Uniform System of Accounts (USOA). Three-digit numbers correspond to items defined in the ARMIS USOA report (FCC Report 43-02). Information on the accounts can be found in 47 C.F.R. part 32 which can be accessed on the Internet at www.fcc.gov/wcb/iatd/47cfr.html.

-- Individual carrier ARMIS 43-02 filing instructions, forms, data as well as footnotes can be found on the Internet at www.fcc.gov/wcb/armis.

Code letters are shown above the name of each company owned or controlled by a holding company as of December 31, 2005.

Name of Company	Code
AT&T Inc.	AT&T
Qwest Communications International, Inc.	Q
Verizon Communications Inc.	VZ

Company Notes

Notes and footnotes submitted by individual carrier with the ARMIS 43-02 filing explaining any differences between the current and past data can be found in the "Preset Reports" on the Internet at www.fcc.gov/wcb/armis.

See notes following this table.

Statistics of Communications Common Carriers

Notes for Tables 2.9 through 2.17 (2006)

NA - Not Applicable.

Data for these tables were obtained from the ARMIS (Automated Reporting Management Information System) reports (ARMIS Report 43-01) filed by incumbent local exchange companies with operating revenues for the year 2006 equal to or in excess of **\$134 million**. The FCC's Phase 1 Accounting Review Order, 14 Rcd 11396 (1999), established streamlined reporting requirements for mid-sized incumbent local exchange carriers (ILECs) beginning in the 1999 reporting year. A mid-sized carrier is a carrier whose annual operating revenues either individually or when aggregated with those of any ILEC it controls, is controlled by, or which it is under common control, are less than **\$7.950 billion**.

Individual carrier ARMIS Report 43-01 filing instructions, forms, data as well as footnotes can be found on the Internet at www.fcc.gov/wcb/armis/.

The reports are filed on a study-area basis and include financial and operational data on revenues, expenses, investment, access lines and minutes of use.

Information presented in these tables was received from 12 companies for 196 study areas representing 48 states (excluding Alaska and Hawaii) plus the District of Columbia and the Commonwealth of Puerto Rico. Data for all tables are obtained from the 2006 calendar-year submissions by the companies.

Detail may not match totals because of necessary rounding.

Detail and totals shown may not match detail or totals shown elsewhere in this publication or from sources with similar data and element names for these reasons:

1. Some companies may interpret the Commission's instructions differently.
2. Some companies may use different internal databases to compile data for different ARMIS reports.
3. Some companies may discover discrepancies in their data and refile data for one ARMIS report but not for others.

Both the Commission's and company's personnel are working to detect and correct discrepancies in the data and to clarify the reporting requirements.

The twelve companies or groups of companies that filed ARMIS 43-01 data from which these tables were derived are:

11. Windstream Corporation (WIN)

Statistics of Communications Common Carriers

Notes for Tables 2.9 through 2.17 (2006) - Continued

Financial Data

The total column reflects the operating results for each of the rows itemized in these tables, and it includes all regulated and non-regulated company operations for each row. These amounts are presented prior to separation between state and interstate jurisdictions.

Subtracting all non-regulated and adjustments from the total column gives the subject-to-separations column, which reflects that portion of each row that must be allocated between state and interstate jurisdictions pursuant to part 36 of the Commission's rules.

The state and interstate columns reflect the allocation of the amount in the subject-to-separations column into its state and interstate components pursuant to those rules. In some instances, the interstate column also reflects Commission-prescribed adjustments made after the separations process. These adjustments are made only at the interstate level; consequently, the state and interstate columns may not necessarily add up to the subject-to-separations column.

All the remaining columns concern the further sub-division of the interstate column's amount into its various components pursuant to part 69 of the Commission's rules.

The common access line columns reflect costs that are recovered through subscriber's common line charge and carrier's common line charge that are assessed on all inter-exchange carriers that use local exchange common line facilities for the provision of interstate or foreign telecommunications services.

The traffic-sensitive access columns reflect costs that are associated with the traffic-sensitive plant engineered to handle the anticipated volume of calls. The switching column reflects that portion of each row that is associated with the connection of toll lines to toll lines, or toll lines to local central offices, exclusive of separate equal access costs, if the exchange carrier has a separate equal access component. The transport column reflects that portion of each line item that is applicable to charges that are assessed on all inter-exchange carriers who use switching or transport facilities that are apportioned to the transport element or elements for purposes of apportioning net investment. The total traffic-sensitive column reflects those amounts that are assigned to the traffic-sensitive element and sub-elements pursuant to part 69 of the Commission's rules. (The total traffic-sensitive column equals the total of the switching column plus the transport column plus the traffic-sensitive information. The latter are charges that are assessed on all inter-exchange carriers who are connected to the assistance boards through the inter-exchange carriers' directory assistance trunks.)

The special access column reflects that portion of each row applicable to the total of all sub-elements that have been established for the use of equipment or facilities assigned to the special access element for purposes of apportioning net investment pursuant to part 69 of the Commission's rules.

The total access column reflects the sum of the common line access column, the traffic-sensitive access column, and the special access column.

The billing and collection column reflects that portion of each row applicable to billing and collection services.

The interexchange column reflects that portion of each row applicable to interexchange services.

The mid-sized ILECs do not file rows 1410, 1420, 1490, and 1590 for taxes, but do file row 1595, federal, state, and other taxes. These are reflected in Tables 2.9, 2.10, and 2.13.

Statistics of Communications Common Carriers

Notes for Tables 2.9 through 2.17 (2006) - Continued

Billable Access Lines

Billable access lines are access lines that are billed either the end-user common line charge (EUCL) or the special access surcharge. Billable access lines as reported in the ARMIS Report 43-01 will differ slightly from switched access lines as reported in the ARMIS Report 43-08. There are several reasons for this, including different reporting requirements, the interpretation of those requirements by various companies, and the methods different companies use to calculate the number of lines. The majority of the differences come from the fact that 800 and "800 like" access lines and derived ISDN channels are not treated as billable access lines in the ARMIS Report 43-01, but are included in the count of access lines in the ARMIS Report 43-08.

For terms and definitions of the billable access lines' columns in the table, see 47 CFR § 54.401(a), and § 69.114, respectively, which can be found on the Internet at www.fcc.gov/wcb/iatd/47cfr.html.

Company Notes

Notes and footnotes submitted by individual carrier with the ARMIS 43-01 filing explaining any differences in the current data compared with the past can be found in the "Preset Reports" on the Internet at www.fcc.gov/wcb/eafs.

Traffic-Sensitive Minutes of Use

Total premium traffic-sensitive Minutes-of-Use (MOU) are calculated using premium local switching revenues and the appropriate rates. MOU are calculated pursuant to § 69.205. All resellers' minutes are included.

Total non-premium traffic-sensitive MOU are calculated using non-premium local switching revenues and the appropriate rates. MOU are calculated pursuant to § 69.113.

Total for All U.S. Points **	7,400,098	627,694	110,458	8,138,250

* U.S. billed revenues represent the amount billed to customers by U.S. carriers.

** Total for All U.S. points, "International Telephone", includes \$2.6 billion billed revenues for carriers requesting confidential treatment for international telephone services. Total for All U.S. Points, "Total All International Services", includes \$460 million billed revenues for carriers requesting confidential treatment for international private line and miscellaneous services. In total, twenty-three carriers requested confidential treatment in the above categories.

Statistics of Communications Common Carriers

Notes for Tables 3.1 through 3.3.

Data shown in these tables were obtained from reports submitted to the FCC by the international carriers pursuant to section 43.61(a) of the Commission's rules. Detail may not match totals because of necessary rounding.

The data are for all U.S. points. The total for U.S. points shown in the tables represents not only the total traffic between the domestic United States (the conterminous U.S., Alaska, Hawaii and Puerto Rico) and other U.S. points (American Samoa, Guam, the Northern Mariana Islands, Wake Island, and the U.S. Virgin Islands), but also, the total traffic between other U.S. points.

In Table 3.1, an * denotes values resulting in zero due to the necessary rounding.

Data for individual United States' points (including small points such as American Samoa, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands), data for individual carriers, and data for prior years are included in the *Section 43.61 International Telecommunications Data* report, published annually by the Federal Communications Commission, International Bureau.

Carriers have requested confidential treatment for transiting minutes by country.

Carriers report the number of leased circuits as of year-end and the number of 64 kilobits per second (64 Kbps) equivalent bearer circuits.

* Beginning in 1984, excludes AT&T Communications and Alascom, each of which reported small amounts of local service revenues for some of the years prior to 1989.

[#] Beginning in 1999, the figures in italics are totals for the large local exchange carriers for which detailed individual company data are presented in Table 2.8. The figures in roman type, which include revenues reported by the mid-sized carriers, are from Table 2.9.

[®] For changes in row/account numbers and names implemented by FCC accounting order released Dec. 17, 2003 (18 FCC Rcd 25759), see listing of accounts in Table 2.8.

See additional notes following Table 4.9.

* Access revenues were first reported in 1984 following the AT&T divestiture.

[#] Beginning in 2001, the figures in italics are for the large local exchange carriers for which detailed individual company data are presented in Table 2.8, whereas the figures in roman type are from Table 2.9 and include revenues reported by the mid-sized carriers.

^x Beginning in 2003, included in accounts 5081-5083.

See additional notes following Table 4.9.

* Beginning in 1984, excludes AT&T Communications and Alascom.

Beginning in 1999, the figures in italics are for the large local exchange carriers for which detailed individual company data are presented in Table 2.8. The figures in roman type, which include revenues reported by the mid-sized carriers, are from Table 2.9.

^x The breakdown of long distance revenues by class of service was eliminated by FCC accounting order released Dec. 17, 2003 (18 FCC Rcd 25759).

See additional notes following Table 4.9.

* Beginning in 1984, excludes AT&T Communications and Alascom.

[#] Beginning in 1999, the figures in italics are for the large local exchange carriers for which detailed individual company data are presented in Table 2.8. The figures in roman type, which include revenues reported by the mid-sized carriers, are from Table 2.9.

[@] For changes in row/account numbers and names implemented by FCC accounting order released Dec. 17, 2003 (18 FCC Rcd 25759), see listing of accounts in Table 2.8.

See additional notes following Table 4.9.

Statistics of Communications Common Carriers

Table 4.5 - Total Operating Revenues of Reporting Incumbent Local Exchange Carriers, 1965-2006 *

(In Thousands of Dollars)

Year	Number of Carriers	Local Service Revenues (500)	Access Revenues (508)	Toll Service Revenues (510)	Miscellaneous Revenues (520)	Uncollectible Operating Revenues (530)	Total Operating Revenues
1965	70	6,758,792	-	5,091,582	592,021	58,994	12,383,400
1966	73	7,229,168	-	5,843,105	638,239	72,087	13,638,426

* Beginning in 1984, excludes AT&T Communications and Alascom.

[#] Beginning in 1999, the figures in italics are for the large local exchange carriers for which detailed individual company data are presented in Table 2.8. The figures in roman type, which include plant data reported by the mid-sized carriers, are from Table 2.9.

^x In 2003, account 2425 was deleted; data are now included in account 2424.

See additional notes following this table.

Statistics of Communications Common Carriers

Notes to Tables 4.1 through 4.9

The historical data presented in these tables were compiled from previous editions of *Statistics of Communications Common Carriers* (SOCC), with updates and revisions contained in the ARMIS database for the most recent five years. For the most part, the original data were gathered from the annual reports of Class A telephone carriers and, beginning in 1957, include the voluntary submissions of selected large telephone companies not subject to the Commission's reporting requirements.

Over the years, the number of carriers reporting to the Commission has varied because of mergers, carrier reclassification, and changes in the reporting criteria. In 1985, the annual operating revenue requirement for telephone carrier reporting was changed from \$1 million to \$100 million. As a result, twenty-one companies that had filed a report for 1984 were relieved of this requirement the following year. These carriers accounted for about \$440 million in total operating revenues in 1984, with two-thirds of them reporting less than \$20 million.

On Jan. 1, 1988, a revised Uniform System of Accounts (USOA) went into effect. As a result of these revisions, data submitted under the new rules may not be comparable on a one-to-one basis with data filed for previous years. In these tables, USOA account numbers are given for each column heading (where applicable). The three-digit numbers refer to Part 31 of the Commission's rules, whereas those with four digits refer to Part 32, the revised USOA that superseded Part 31.

In the 1995/96 edition of this publication, the 1995 data did not include AT&T Communications or Alascom (which had been acquired by AT&T Corp.) because the detailed reporting requirements for these carriers were eliminated after the Commission had decided that AT&T would no longer be considered a dominant carrier. In the 1996/1997 book, these tables were revised to exclude data for the aforementioned carriers for 1984 and subsequent years--the period since AT&T's divestiture of the Bell operating companies. (The double line in the year column of each table marks the time of divestiture, which was effective Jan. 1, 1984.) Therefore, the data for 1984 to the present are not comparable to the data for 1960-83. Historical data that include AT&T Communications and Alascom appear in the 1994/1995 and earlier editions of this publication.

Beginning with the reports filed for 1999, the Commission streamlined the reporting requirements for certain mid-sized incumbent local exchange carriers in Phase 1 of its Accounting Review Report and Order, 14 FCC Rcd 11396 (1999). Further streamlining was undertaken by the FCC's Phase 2 Report and Order, 16 FCC Rcd 19911 (2001), which included the elimination of certain reporting requirements for mid-sized carriers. As a result of these changes, only the large carriers included in Table 2.8 of this publication continue to report much of the financial data that are presented in these historical tables. Such items are indicated by the figures in italics. Because of different data sources for 2001-2003 and prior years (1988-2000), the figures for all reporting carriers for these two periods are not strictly comparable; the differences, however, are for the most part relatively minor.

The annual ARMIS Order that was released on Dec. 17, 2003 (18 FCC Rcd 25759) implemented the revisions to FCC Report 43-01, the Annual Summary Report, and FCC Report 43-02, the USOA Report, that were approved by the Commission in its Phase 2 Report and Order, 16 FCC Rcd 19911 (2001). The two ARMIS reports are the source of the post-1987 data for incumbent local exchange carriers that are presented in these historical tables.

Revenues

In Table 4.3, the toll private line revenue categories used for the 1960-87 period were introduced in the 1981 annual reports, and are not completely comparable to the categories listed in the reports for 1980 and prior years. The revenue breakdown before 1981 was as follows: telephone, teletypewriter, other telegraph, Telpak (beginning in 1961), program transmission - audio, program transmission - video, and other private line services.

¹ Effective Nov. 15, 1999, account 5010, public telephone revenues, was eliminated.

² In the 1957 through 1973 SOCC books, details of private line revenues were not totaled for carriers that had filed reports on a voluntary basis. In this tabulation, aggregate data for those carriers are included in the other services category of toll private line service revenues.

³ In 1982 through 1987, some of the non-Bell companies did not provide a breakdown of their toll private line revenues. These revenues were reported as either voice-grade service revenues or other private line service revenues.

⁴ Wide area toll service (WATS) began in 1961. During the 1961-75 period, some of the non-Bell companies included WATS revenues in their message toll service revenues. The WATS figures for 1961-65 include revenues for wide area data service, which was offered on a limited developmental basis during that period.

⁵ Beginning in 1961, includes earth station revenues.

⁶ For 2002, includes reserves recorded for MCI WorldCom.

⁷ Includes revenue settlements (row 1050 of ARMIS 43-01 report).

Statistics of Communications Common Carriers

Notes to Tables 4.1 through 4.9 -- Continued

Expenses

- ¹ The plant specific operations expense accounts are used to record the expenses associated with particular kinds of telecommunications plant. For details, see expense accounts in Table 2.8.
- ² Beginning in 2001, other property, plant and equipment expenses (account 6510) are included with network operations expenses (account 6530).

Earnings

- ¹ Net operating income for 1960-87 is after the addition and subtraction of rents from and for the lease of operating property from net operating revenues. Beginning in 1988, these rents are included in operating revenues and expenses.
- ² Beginning in 1970, net income is after extraordinary and delayed items. In earlier years, these items were charged or credited to retained earnings.
- ³ The significant change in nonoperating income and expense and nonoperating taxes that occurred in 1993 is primarily attributable to business restructuring and the adoption of new accounting standards.

Assets and Liabilities

- ¹ Includes prepaid accounts.
- ² Includes miscellaneous physical property (account 103), which is reported as nonoperating plant (account 2006) under the revised USOA.
- ³ Includes other jurisdictional assets (account 1500), which were not reported before 1988.
- ⁴ In 1983, AT&T changed the par value of its common stock from \$16.67 to \$1 per share.

Plant

- ¹ During the 1960-84 period, detailed plant account data for those carriers that reported to the Commission on a voluntary basis were not included in the *SOCC* tabulations. Accordingly, the number of carriers included in this table for that period differs from the number included in Tables 4.1 through 4.8.
- ² In 1999, accounts 2114, 2115, and 2116 (special purpose vehicles, garage work equipment, and other work equipment, respectively) were combined into a single new account 2114, tools and other work equipment.
- ³ Includes operator systems (account 2220).
- ⁴ Includes satellite and earth station facilities (account 2231.1).
- ⁵ Drop and block wires, formerly included in this column, are included in aerial wire (account 242.1), or buried cable (account 242.3), as appropriate.
- ⁶ Prior to 1984, public telephone equipment was included in account 231, station apparatus.
- ⁷ Account 262 includes PBX and station equipment installed for official company use. Under the new rules, such plant is included in account 2123, office equipment.
- ⁸ Intra-building network cable was called "house cable" under the old rules and was included in the aerial cable account (242.1).
- ⁹ Includes account 207, right-of-way, which was eliminated as a separate account effective Jan. 1, 1960. From 1960 through 1987, right-of-way was included primarily in the appropriate outside plant account.
- ¹⁰ Includes unclassified plant (reported in 1969, 1974, 1975, and 1984).
- ¹¹ Consists of capital leases (account 2681) and leasehold improvements (account 2682). Beginning in 2001, includes intangibles (account 2690).
- ¹² Beginning in 2001, included with amortizable tangible assets (account 2680).
- ¹³ Under the revised USOA, satellite earth stations are included in central office transmission facilities.
- ¹⁴ Beginning in 1995, the distinction between short-term and long-term plant under construction was eliminated. Account 2003 now comprises total plant under construction; account 2004 was deleted.

Source: These historical statistics were compiled from previous editions of *Statistics of Communications Common Carriers*, with updates and revisions contained in the ARMIS database for the most recent five years. Totals may be understated because certain data pertaining to the carriers included in this table are not available.

Note: Between 1987 and 1988, there were significant changes in the definitions of many of the items in this table. With the implementation of a new Uniform System of Accounts (USOA) in 1988, as indicated in the notes to Tables 4.1 - 4.9, new categories of reporting units of physical plant and network usage were created and defined. In 1992, some of these definitions were further refined when the reporting mechanism of the carriers was changed for the filing of 1991 data. For these reasons, there may be inconsistencies in the data reported for 1984-1987 compared to what was reported for 1988, and also between 1988 and subsequent years, as the carriers were adapting to the new USOA and automated reporting requirements.

In 2003, the analog/digital breakdown of business and residential switched access lines was replaced by a single-line/multiline division of business lines and a lifeline/non-lifeline separation of residential lines.

¹ Beginning in 2003, payphone lines are included with total business lines.

² For 1988-1990, miles were converted to kilometers by multiplying the number of miles by 1.6093 and rounding to the nearest whole number.

³ Beginning in 2001, employee and compensation figures (shown in italics) are for the Bell operating companies only.

⁴ Before 1997, referred to as sheath kilometers of copper cable.

¹ Includes end-user switched access lines for competitive local exchange carriers (CLECs) and incumbent local exchange carriers (ILECs) as reported in FCC Form 477. Prior to 2005, carriers with greater than 10,000 lines in a state were required to report. Beginning in 2005, all carriers in a state were required to report.

² Includes end-user switched access lines, resold lines, and UNE-P lines.

³ Beginning in 2001, a substantial number of ILEC lines provided to CLECs as UNE-P lines are not included in this total.

Source: CLEC and ILEC access lines: Industry Analysis and Technology Division, Wireline Competition Bureau, *Local Telephone Competition: Status as of December 31, 2006* (December 2007).

Local loops: National Exchange Carrier Association, Universal Service Fund filings.

Table 4.10, after inflating access lines of reporting carriers to represent the total industry.

The 1996 adjustment factor was used for the years prior to 1996.

Note: Prior to 2005, providers with 250 or more lines in a state were required to report. Beginning in 2005, all providers in a state were required to report.

¹ A high-speed line is a connection to an end-user customer that is faster than 200 kbps in at least one direction. Advanced services lines, which are a subset of high-speed lines, are connections to end-user customers that are faster than 200 kbps in both directions. The speed of the purchased service varies among end-user customers. For example, a high-speed service delivered to the end-user customer over other traditional wireline technology, such as DS1 or DS3 service, or over optical fiber to the end user's premises may be much faster than the ADSL or cable modem service purchased by a different, or by the same, end user. Numbers of lines reported here are not adjusted for the speed of the service delivered over the line or the number of end users able to utilize the lines.

² The mutually exclusive types of technology are, respectively: Asymmetric Digital Subscriber Line (ADSL) technologies, which provide speeds in one direction greater than speeds in the other direction; wireline technologies "other" than ADSL include traditional telephone company high-speed services and Symmetric Digital Subscriber Line (SDSL) services that provide equivalent functionality; coaxial cable includes the typical hybrid fiber-coax (HFC) architecture of upgraded cable TV systems; optical fiber to the subscriber's premises (e.g., Fiber-to-the-Home, or FTTH); and satellite and terrestrial wireless systems, which use radio spectrum to communicate with a radio transmitter at the subscriber's premises.

¹ See Industry Analysis and Technology Division, Wireline Competition Bureau, *Local Telephone Competition: Status as of December 31, 2006* (January 2007). Carriers with under 10,000 lines in a state were not required to report prior to June 2005 so FCC Form 477 data for the earlier time periods undercount the total number of wireless lines in service.

² See current and previous editions of Industry Analysis and Technology Division, Wireline Competition Bureau, *Numbering Resource Utilization in the United States*. Numbers have been adjusted for porting between wireless and wireline carriers beginning with the December 2003 data.

Source: Cellular Telecommunications & Internet Association (CTIA) and FCC Forms 477 and 502. FCC Form 502 contains assigned wireless numbers.

¹ Includes loops formerly owned by Verizon/GTE and SBC Communications, Inc./ Southern New England Telephone Co. Woodbury Telephone of Connecticut, a subsidiary of SBC, has 24,451 loops and Verizon of the Northern Mariana Islands has 24,480 loops that are not included in the total. These loops are included in the category "All Other Local Exchange Companies."

Note: Universal Service Fund (USF) loops are subscriber or common lines that are jointly used for local exchange service and exchange access for state and interstate interexchange services.

Source: Data filed annually by the National Exchange Carrier Association pursuant to Part 36 of the Commission Rules.

¹ Includes loops formerly owned by Verizon/GTE and SBC Communications, Inc./ Southern New England Telephone Co. Woodbury Telephone of Connecticut, a subsidiary of SBC, has 23,476 loops and Verizon of the Northern Mariana Islands has 22,770 loops that are not included in the total. These loops are included in the category "All Other Local Exchange Companies."

Note: Universal Service Fund (USF) loops are subscriber or common lines that are jointly used for local exchange service and exchange access for state and interstate interexchange services.

Source: Data filed annually by the National Exchange Carrier Association pursuant to Part 36 of the Commission Rules.

2006	2.5	1.7	2.2	5.1	3.3	2.7	0.9	4.5

Note: Data reflect the percent change from December of the previous year through December of the year shown. The CPI for all items measures the impact of inflation on consumers. The CPI index of all telephone services is based on a "market basket" intended to represent the telephone related expenditures of a typical urban household based on monthly service charges, message unit charges, leased equipment, installation, enhanced services (such as tone dialing and call waiting), taxes, subscriber line charges, and all other consumer expenditures associated with telephone services except long distance charges. In contrast, the PPI index of local residential services is based only on service charges for residential service, optional touch-tone service, and subscriber line charges. The PPI telephone indices were revised in June 1995. Index values after July 1995 are not comparable to index values published from 1972 through July 1995.

* The CPI telephone service index was revised in December of 1997.

¹ Due to month-to-month variation in the new PPI index, PPI price levels are determined using a five-month weighted average.

¹ Revised figures.

² Subject to revision.

³ Rates are based on flat-rate service where available, and measured/message service with 100 five-minute, same-zone, business-day calls elsewhere. As of 2001, all 95 cities' rates reflect flat rate service, which made measuring the cost of such calls unnecessary.

⁴ Beginning in 2002, rates include additional monthly charges for touch-tone service.

Statistics of Communications Common Carriers

**Table 5.14 -- Telephone Numbers Assigned for Toll-Free Service (800, 888, 877, 866)
(Summary December 1993 - December 2006)**

Year	Month	Working Toll-Free Numbers	Miscellaneous Toll-Free Numbers ¹	Total Toll-Free Numbers Assigned	Spare Toll-Free Numbers Still Available
1993	December	3,155,955	731,438	3,887,393	3,822,607
1994	December	4,948,605	763,235	5,711,840	1,998,160
1995	December	6,700,576	286,487	6,987,063	722,937
1996	December	9,527,982	945,671	10,473,653	5,216,347
1997	December	12,980,714	996,449	13,977,163	1,712,837
1998	December	16,200,883	965,466	17,166,349	6,503,651
1999	December	19,677,001	1,101,964	20,778,965	2,891,035
2000	December	23,022,015	1,178,096	24,200,111	7,449,889
2001	December	23,453,029	1,027,973	24,481,002	7,168,998
2002	December	22,496,215	1,051,232	23,547,447	8,102,553
2003	December	21,108,662	941,520	22,050,182	9,599,818
2004	December	22,159,440	1,145,661	23,305,101	8,344,899
2005	December	22,474,643	957,835	23,432,478	8,217,522
2006	December	22,709,753	756,808	23,466,561	8,183,439

Note: For individual month assignments through June 2003, see Industry Analysis and Technology Division, Wireline Competition Bureau, *Trends in Telephone Service* (August 2003).

* Toll-free (800) service was initially offered by AT&T in 1967. On May 1, 1993, procedures for routing toll-free calls were changed and 800 numbers were made "portable" so customers who switched service providers could retain their numbers. Due to the growth in toll-free numbers, a new toll-free calling code, 888, was added in March 1996, which made it possible to assign about 8 million new toll-free numbers. A third toll-free calling code, 877, was added in April 1998; and a fourth toll-free code, 866, was added in July 2000.

¹ Miscellaneous numbers include those in the 800, 888, 877, and 866 service management systems maintained by Database Service Management, Inc., and categorized as reserved, assigned but not yet activated, recently disconnected, or suspended.

Note: Detail may not add to totals due to rounding. Some data for prior years have been revised.

¹ TRS filers generally reported pay telephone revenues as local service revenues, access revenues or operator toll revenues. The Universal Service and FCC Form 499-A worksheets contain a separate category for payphone coin revenues. Starting in 1997, payphone revenues include payphone compensation received from toll carriers.

² TRS Worksheet filers generally reported special access revenues as access revenues. Reporting changes implemented with the Universal Service Worksheet explain the increase in local private line revenues and the fall in access revenues shown for 1997. TRS Worksheet filers included subscriber line charges with other access charges. Through 1996, these revenues have been disaggregated by assuming that the end-user access revenues in Table 4.2 of *Statistics of Communications Common Carriers* represents 93% of industry total subscriber line charge revenues. Universal Service Worksheet filers report subscriber line charges in a separate category. The increase from 1997 to 1998 represents PICC charges levied by ILECs as well as \$1.2 billion of PICC pass-through charges levied by toll carriers.

³ Significant amounts of enhanced services, billing and collection, CPE and other non-telecommunications revenues were reported in the TRS mobile and other local service categories through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenues reported as mobile and other local revenues were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (then reported as account 5200 and account 5280, respectively) and 10% of amounts reported as mobile service revenue. These amounts have been removed from Other Local and moved to the Non-Telecommunications category.

⁴ Charges on end-user bills identified as recovering state or federal universal service contributions are reported separately from local, wireless and toll revenues. Reported amounts are apportioned between local, wireless and toll service based on the proportions of local, wireless and toll intrastate and interstate revenues by type of carrier.

¹ Filers are asked to select for themselves a service provider category that best describes their operations. The choices have changed over the years. For example, most satellite service providers identified themselves as other toll carriers in their 1997 FCC Form 431 TRS worksheets because there was no separate category for satellite service providers. For 2003 through 2005, some filers identified themselves as all distance carriers. These filers have been reclassified to be consistent with prior classifications.

² Significant amounts of enhanced services, billing and collection, CPE and other non-telecommunications revenues were reported in the TRS mobile and other local service categories through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenues reported as mobile and other local revenues were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (then reported as account 5200 and account 5280, respectively) and 10% of amounts reported as mobile service revenue. These amounts have been removed from Other Local and moved to the Non-Telecommunications category.

³ Adjustments include some amounts withheld to preserve confidentiality and revisions made after the initial publication of the data.
