

Of Cosmic Rays and Computer Chips

Roger Stoutenburgh

An open house was held at the Tandem Van de Graaff accelerator on July 21 to highlight the unique capabilities of the Single Event Upset Test Facility (SEUTF). E. G. Stassinopoulos (above, right), of the National Aeronautics and Space Administration (NASA), demonstrated the facility, which simulates the effects of cosmic rays on computer chips.

Space is permeated by high-energy, charged particles; when those cosmic rays hit computer chips, they tend to cause errors that could lead to catastrophic equipment failures.

To study such effects and to test new computer chip designs, a consortium of government agencies — NASA, the Naval Research Laboratory, the National Security Agency, and the U.S. Army Strategic Defense Command — worked with BNL to build the SEUTF, which is also available for use by other government agencies and private companies.

The facility uses the Tandem to create a low-flux beam of charged ions, which then bombards a group of computer chips. Meanwhile, test equipment exercises the chips and tests them for errors.

Although the SEUTF was built mainly to study effects in outer space, it is also becoming an important test facility for new ground-based computers.

"Even down here, there are cosmic rays, and some errors have been observed," said Peter Thieberger, who heads the Tandem. "As chips become more and more compact, this facility becomes more and more important."

— Kevin Eber

A Long-Lost City Found

With settlements that probably dated as far back as 5000 B.C., Mesopotamia has been known as the "cradle of civilization." One ancient Mesopotamian capital — Mashkan-shapir — had long been lost.

But lost was found in January 1989, when Anthropologist Elizabeth Stone and her collaborators discovered texts on the surface of a large, low mound in southern Mesopotamia, now known as Iraq, that definitively identified it with Mashkan-shapir.

Stone will discuss "The Discovery of Mashkan-shapir: Explorations of Ancient Mesopotamian Urbanism," on Thursday, August 24, when she gives the next Brookhaven Women in Science (BWIS) seminar. Her talk will begin at 3:30 p.m. in Berkner Hall; coffee and cookies will precede the lecture at 3 p.m.

An associate professor in the Department of Anthropology at the State University of New York at Stony Brook, Stone has directed the Tell Abu Duwari Project in Iraq since 1987, under grants from the National Geographic Society, the Fullbright Program and the American Schools of Oriental Research.

The discovery of Mashkan-shapir was a bonus for Stone's project, which was conceived in more general terms: to provide, for the first time, a full understanding of the organization of a Mesopotamian city, with special emphasis on the distribution of authority therein. During two preliminary seasons, a combination of survey, excavation and remote sensing have already contributed to

Elizabeth Stone

resolving some of these questions, and Stone will discuss these results in her talk.

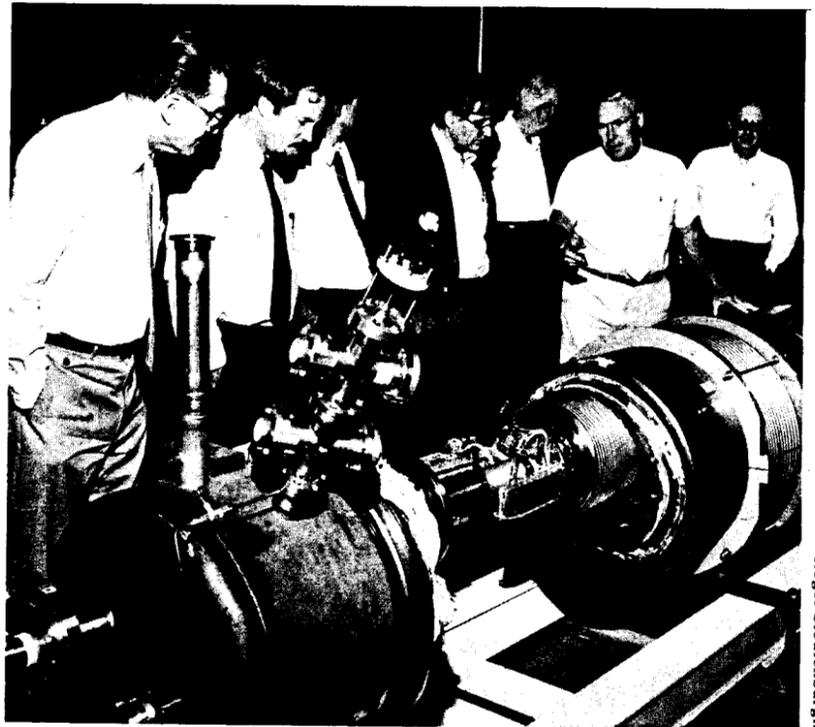

Stone received a B.A. in anthropology from the University of Pennsylvania, 1971; an M.A. in anthropology from Harvard University, 1973; and her Ph.D. in anthropology from the University of Chicago, 1979. In addition to Iraq, her field experience has included archaeological projects in England, Iran, West Germany, Afghanistan and Syria.

Summing up her interests, Stone said, "My research has been concentrated in the study of ancient Mesopotamian society and economy, using a mixture of archaeological and

The Attraction: SSC Magnets

Good news for the proposed Superconducting Super Collider (SSC) came at the end of July when construction funds for fiscal year 1990 were included in the appropriations bills passed by both houses of Congress. Visiting BNL at about that time was the Universities Research Association SSC Board of Overseers, the 15-member group that oversees the SSC Laboratory and which includes BNL Deputy Director Martin Blume in its membership.

At Brookhaven on July 27 and 28, the Board was most interested in the progress of the R&D going on at the Lab, particularly on magnets, of which 7,600 will be needed to guide and focus protons in the SSC's two intersecting rings. In Bldg. 902, where R&D magnets are being assembled and tested, Eugene Kelly (second from right), who heads the engineering and fabrication effort within the Magnet Division of the Accelerator Development Department, showed a fully assembled dipole to members of the SSC Board. Looking at the magnet, which is being prepared for cold testing, are: (from left) Martin Walt, Lockheed Research; Robert Hollebeck, University of Pennsylvania; Raphael Kasper, SSC Laboratory; George Trilling, Lawrence Berkeley Laboratory; George Wheeler, University of Tennessee; and Robert Frosch, General Motors Research Laboratory.

Roger Stoutenburgh

Patent Awarded

James Reilly, Department of Applied Science (DAS); Edward Grohse, formerly DAS; John Johnson, DAS; and the late Warren Winsche, Director's Office, have been awarded U.S. Patent No. 4,769,225 for inventing a process involving the storage of hydrogen in metal hydrides. These are hydrogen compounds formed by the direct and reversible reaction of hydrogen with many metals.

The process consists of the formation and decomposition of a metal hydride suspended as small particles in a liquid hydrocarbon such as octane. Such suspensions of solid particles in liquids are usually referred to as slurries and are widely used in industry.

The metal hydrides being used were

chosen because they can absorb or desorb large amounts of hydrogen at convenient temperatures and pressures. They can also undergo many cycles of absorption and desorption without a serious deterioration of their hydrogen-storage capacity.

Current or potential applications of such hydrides include hydrogen purification, energy storage, heat pumps and isotope separation.

Until now, all these applications involved the contact of hydrogen gas with a dry, immobile bed of metal and/or metal hydride particles. This design imposes severe problems in heat transport and transfer, separating the solids from the exiting gas stream, and vessel distortion due to the expansion and contraction of the reacting solid particles.

These problems would be eliminated or substantially reduced by using metal hydride slurries in place of conventional, dry-bed contactors. Additionally the liquid-like properties of slurries should greatly increase flexibility in process design.

Overall, these advantages should result in more cost effective and efficient use of these materials.

textual analyses. I have been especially interested in examining the organization of residential districts and their role in the administration of ancient cities."

Stone came to Stony Brook in 1977 as a lecturer, became assistant professor in 1978 and was named to her present position in 1985. Currently, she is also a research associate in the Department of Archaeology at Boston University.

BWIS will sponsor a luncheon in honor of the speaker at noon on the day of her talk, in Berkner Hall, Room A. The cost is \$8 per person. For reservations, contact Carmen Benkowitz, Ext. 4135.

Sculpture on View

The Standard Model (abandoned), a 40-foot-long, steel and glass sculptural installation by Stephen Rueckert, is being shown in the Collider Center, Bldg. 1005S, Wednesdays, Thursdays and Fridays through September 15, from 11 a.m. to 2 p.m.

Accidents Happen

... and when they do, a healthy blood supply is vital.

Help Long Island Blood Services meet the need for blood over the Labor Day weekend. Normally, this need is met by donors from the Communications Workers of America, but during their present strike, the Lab has agreed to run a special Blood Drive:

Date: Friday, September 1

Time: 9:30 a.m. to 3 p.m.

Place: Berkner Hall

For Appointment: Call Blood Drive Chair Susan Foster, Ext. 2888.

Note to frequent donors: As the waiting period between donations is eight weeks, those who last gave during BNL's June Blood Drive nine weeks ago can give again at this drive.

Art Trip Offers Flora and Fauna

On Saturday, September 23, the BERA Art Committee is sponsoring a trip to the Bronx Zoo and the nearby New York Botanical Gardens.

The bus will cost \$15, and entry to the gardens is free. Entry to the zoo is \$3.75, and \$1.50 for children under 13. Group-rate tickets for all zoo rides will be available at \$8, if at least 15 people want them.

The bus will leave the parking lot opposite Berkner Hall at 9 a.m., and leave the Bronx at 3:30 p.m. Tickets are available now from Bob Chrien, Ext. 3903; after August 24, from Liz Seubert, Ext. 2346.

Nursery School

The Upton Nursery School is enrolling three- and four-year-old children for the 1989-90 school year. This cooperative preschool offers three-hour classes three days a week in the Recreation Building on site. The school is open to families of BNL employees and their relatives. For more information, call Valerie Condemni, 399-1258, or Kathy Hershco-vitch, 331-3785.

Successful Harvest for Summer Apprentices

BNL's Summer Apprenticeship Research Program for Minorities, now in its ninth summer, has yielded two bumper crops — a crop of successful students and a crop of the vegetables they planted.

The apprenticeship program sponsors 32 ninth and tenth graders each summer — from Suffolk County high schools and one from each borough in New York City — to spend four weeks at BNL. The program is divided into two semesters, each with 16 students; during the four weeks, they learn about physics, biology, chemistry, engineering and medicine from BNL staff.

One of the highlights of the program is a hydroponic garden, built by previous students in the shell of an old greenhouse behind Biology, Bldg. 463. That garden, which uses nutrient-laden water to grow plants without soil, has become a big success.

"This was our first year of harvest, and it was great," said Renée Flack of the Affirmative Action Office, director of the apprenticeship program.

"We didn't know how well it would work, so we planted a lot of crops," said Flack. "We planted lettuce, tomatoes, cucumbers, peas, string beans, squash, corn and melons. Everything worked, except the corn and melons."

The bountiful crop was the culmination of a project that began three years ago, when the Biology Department gave the greenhouse — then slated to be demolished — to the program. The greenhouse was just an empty frame and was in shambles.

"Plant Engineering fixed the doors and did the electrical machinery work, but the kids did everything else," said Flack.

Through the hard work of the students, the greenhouse was slowly converted into a fully functional hydroponic facility. Flack gives a lot

Renée Flack (left) shows off the bountiful crop in the greenhouse behind Biology, Bldg. 463, as Arthur Pitschi (back, left) looks on with this year's first-semester group of student apprentices. The second-semester group is now on site and will be leaving August 25.

of the credit to Arthur Pitschi, a teacher at Patchogue-Medford High School, who has been with the program since its inception. Pitschi helped to rebuild the greenhouse and maintains it when the students aren't around.

This year's crop was so successful that the Program gave away 50 heads of lettuce to the students' parents. Those on site have also had a chance to sample the lettuce, because Flack sold about \$300 worth to the Marriott Corporation, which runs the Cafeteria.

"We're still trying to decide what we're going to do with the money," said Flack. "But we're hoping that the program will run itself, eventually." The program is currently funded by the U.S. Department of Energy.

But the crop has led to more than just the unexpected income — it has also inspired another gift from the Biology Department.

"Because of the success of the greenhouse, Biology has graciously offered to give us their second, neighboring greenhouse," said Flack. "It was just given to us in July, so we haven't gotten funding to fix it up yet, but we will be seeking funding soon."

Of course, the real goal of the program isn't the greenhouse, but rather the harvest of scientifically motivated young minds. According to Flack, the program has yielded a bumper crop of fine students, too.

"Our very first student just graduated from Princeton, plus there are two students at Harvard and one pre-med," Flack said. "We're doing really well."

— Kevin Eber

BEFORE AND AFTER: The apprenticeship program's revamped greenhouse (left) contrasts strongly with the second greenhouse (right), which

was recently donated to the program by the Biology Department. Before refurbishment, both greenhouses looked very similar.

Health Physics Training — From Classroom To Catastrophe

The scene at left is not a typical day in graduate school. But it was part of the educational scene for nine graduate students who were at BNL this summer for a ten-week Health Physics Summer Training Program.

Today is the last day of the program, which takes advantage of the Lab's facilities to provide health physics education. The training is intended to supplement other graduate studies, which usually do not offer practical experience in health physics.

The program is coordinated by Stan Alter of the Safety & Environmental Protection Division (S&EP), with the help of Kathleen McIntyre and Mary Pat Takacs, both also of S&EP.

The rigorous program includes a series of lectures and specific training on various radiological techniques and instrumentation; seminars given by the students on a variety of research subjects; and program-long projects, in which the students work with S&EP staff members on a current research or practical problem. The program also features 21 seminars presented by BNL staff members.

In a drill held on August 4, students Erik Still (left), University of Washington, and Gerard Huppe (foreground), San Diego State University, carry Rugged-Ron-the-Dummy from Bldg. 835 as John Aloï, an S&EP Health Physics technician, steps out the door. The drill scenario was a smoke-filled room with radioactive contamination, and, despite a heroic effort, the dummy didn't make it.

Other 1989 Health Physics students, not shown, are: Heng-Gung Chen, University of Lowell; Bing Fang, Rutgers University; Leanne Meyer, Northwestern University; Richard Peros, Rutgers University; Antonio Quinones, University of Puerto Rico; Nick Shah, University of Illinois; and Rudolph Woode, New York University Medical Center.

Teachers Become Researchers

To keep ahead of their students' questions on the latest developments in science and technology, 13 high school science teachers from five states and the District of Columbia spent the last eight weeks at BNL as part of the first annual Teacher Research Associate Program.

Sponsored by the U.S. Department of Energy (DOE) at 14 of its laboratories, the program involves over 150 teachers from across the country in hands-on research to enhance their teaching skills. Its purpose is to help improve the quality of math and science education in the U.S. At BNL, the program was administered by the

Office of Educational Programs.

As DOE Secretary James Watkins said in announcing the program, "It offers a great return on DOE's investment because each teacher reaches 150 students every year."

As research associates, the 13 teachers at BNL conducted research into such topics as particle interactions at high energies, thin-film superconductors, radon and thoron in Long Island soil, carbon dioxide emissions and biodegradation of geothermal sludges. They will use the experience to develop demonstrations and experiments for their classes.

Roger Stoutenburgh

The first year's group of Teacher Research Associates at BNL: (top, from left) Michael Herzfeld, Reading High School, Reading, Pennsylvania; Patrick Blackburn, Beloit Junior-Senior High School, Beloit, Kansas; Monique Morton, Woodrow Wilson High School, Washington, D.C.; Harry Stuckey, Garden City High School, Garden City; Karen Maldonado, Memorial Junior High School, Valley Stream; (bottom, from left) Otto Phanstiel, Stanton College Preparatory School, Jacksonville, Florida; Joseph DiSpigno, Comsewogue High School, Port Jefferson Station; Ashton Uter, Woodrow Wilson High School, Washington, D.C.; Maryann Librizzi, Saint Anthony's High School, South Huntington; David Rettie, Olympus High School, Salt Lake City, Utah; and Jeanne Dyer, Gaither High School, Tampa, Florida. Missing from the picture: Stacey Prusiewicz, LaSalle Military Academy, Oakdale, and Glenn Williams, Saint John the Baptist High School, West Islip.

New Radiation Signs in Stock

Inserting a message into one of the five pockets on the Lab's new "Caution - Radiation Area" signs is Norman Rohrig, Safety & Environmental Protection Division, who is spearheading BNL's effort to comply with Department of Energy (DOE) order 5480.11.

That order mandates stricter regulations for all DOE contractors regarding radiation safety. One of these concerns the new radiation signs — yellow with magenta lettering — which have already begun to appear around the Lab. Up to five of 25 different inserts may be slipped in the plastic pockets so that each sign can carry a message tailored for a specific area. As soon as possible, these new signs should replace all the old ones on site. The signs and the inserts are now stock items, available in the Stationary Warehouse, Bldg. T-86, and listed in the Safety catalog under "Safety Signs."

Roger Stoutenburgh

Another new sign with the same color scheme will shortly be seen designating a site as a "Controlled Area," and defining it as an "Area controlled for radiation protection purposes. For entry you must have General Employee Training and appropriate Radiation Worker Training or be escorted by a trained individual."

This sign addresses another aspect of the DOE order, which requires detailed training, specialized to their tasks, for radiation workers, as well as general training for other Lab employees. Another DOE requirement is that instruments be available at each radiation area to check outgoing items to make sure they are free of contamination or activation.

The radiation safety program must be in full compliance with the DOE order by January 1990.

Amateur Radio Club

The Amateur Radio Club will meet in the Management Information Systems conference room, Bldg. 459, on Thursday, August 24, at noon.

The agenda includes the progress of the conversion of the UHF repeater and upcoming club activities.

All licensed radio amateurs employed at the Lab are invited to attend, and those interested in becoming licensed amateur radio operators are also welcome.

For more information, please contact Andy Feldman, Ext. 3264, or Bob Bacharach, Ext. 7790.

No Safety Shoes Next Two Weeks

The on-site safety shoe representative will be on vacation August 21 through September 1. Normal hours will resume Tuesday, September 5.

Outdoor Volleyball

The final outdoor, mixed-league volleyball tournament will be held on Wednesday, August 30. Participation is limited to 36 players on a first-come, first-served basis. A \$22 entrance fee is payable on the evening of the tournament. In the event of bad weather, the tournament will be held in the gym.

Contact Kathi Barkigia, Ext. 7661, or Terry Sullivan, Ext. 2840, by Monday, August 28, for further information.

Bowlers Needed

Women bowlers are needed this September for the Pink League on Tuesday nights in Port Jefferson. Anyone interested should call Donna Cunningham, Ext. 4599.

Cafeteria Menu

Monday, August 21	
Soup: Tomato rice	(cup) .75 (bowl) .95
BBQ chicken w/pot. or veg.	3.10
Beef teriyaki w/pot. or veg.	3.10
Lite-line: Broiled chicken w/pot. or veg.	3.10
Hot deli: Pastrami	2.85
Tuesday, August 22	
Soup: Chicken noodle	(cup) .75 (bowl) .95
Salisbury steak w/pot. or veg.	3.10
Broiled turkey breast w/pot. or veg.	3.10
Lite-line: Chicken salad primavera	2.95
Hot deli: Hero by the inch	(inch) 1.25
Wednesday, August 23	
Soup: Vegetable	(cup) .75 (bowl) .95
Hungarian goulash	3.10
Chicken Parmesan w/spaghetti	3.10
Lite-line: Ham roll-up plate	2.95
Hot deli: Fish on a bun	2.85
Thursday, August 24	
Soup: Split pea	(cup) .75 (bowl) .95
Broiled pork chops w/pot. or veg.	3.10
Spaghetti & meatballs w/garlic bread	3.10
Lite-line: Tuna salad plate	2.95
Hot deli: Open roast beef	2.85
Friday, August 25	
Soup: Seafood bisque	(cup) .75 (bowl) .95
Beef chow mein	3.10
Fish Buena Vista w/pot. or veg.	3.10
Lite-line: Broiled fish w/pot. or veg.	3.10
Hot deli: Turkey melt	2.85

a.m. to 1 p.m. in the Cafeteria. Only 350 tickets are available, and they will be sold on a first-come, first-served basis, Thursdays and Fridays at the Cafeteria, until they are gone.

Your ticket to this Special Event entitles you to enjoy the following:

- **Fashion show** — 6:30 p.m., featuring the fashions of Sophisticated Ladies, a Patchogue shop.
- **Dinner** — 7:30 p.m., your choice of chicken cordon bleu or prime rib.
- **Theater** — 9 p.m., musical numbers, skits and variety acts performed by BNL's Theater Group and others.
- **Viennese table** — and coffee or tea, after the theater.
- **Dancing** — until 2 a.m., to an "oldies" band in the Cafeteria or deejay-played music in Rooms A & B.

The festivities will be accompanied by a cash bar.

For more information, contact BERA Special Events Committee chair Rosalie Piccione, Ext. 3160, or member Betty Pergan, Ext. 2937
