

I live in Jonesboro, AR and believe the FSS vital to safety at that airport. Although they do not have radar, they help with traffic advisories. Without a control tower, it is my opinion that shutting down this FSS will result in a mid-air collision. The airport has an active flight school and gets very busy at times. I always use the FSS for weather advisories and traffic advisories when leaving and approaching the area. I cannot state my concerns strongly enough. Should this FSS be shut down and no operating tower installed, I believe it will result in injury or death due to collision.
