Abstract

This document describes the contents of the Version 2 Release 5A.00 delivery. Version 2 Release 5A.00 will be delivered to the Distributed Active Archive Centers (DAACs) as a part of the final pre-launch delivery. This document describes the configuration for Release 5A.00. This includes:

- Custom software released as of July 28, 1999
- Commercial off-the shelf (COTS) hardware and software
- Public domain software.

This document also provides a description of the product capabilities, inventory of the delivery, and any information pertinent to the installation and operations of this product.

Keywords: 4PX, 4PY, 5A, CCR, code, configuration, COTS, epsilon, gamma, hardware, mapping, inventory, listing, NCR, release, software, tar file, version,

1. Introduction

1.1 Identification

This is a Version Description Document (VDD) prepared using NASA-STD-2100 as a guide. It is submitted as part of the ECS Version 2.0 delivery for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS), contract number NAS5-60000.

1.2 Scope

This document describes the delivery contents of the ECS Version 2.0 Release 5A.00 components including commercial off-the shelf (COTS) hardware and software, custom software, and accompanying documentation.

1.3 Purpose

The purpose of this document is to describe the contents and summarize the capabilities developed as the ECS Version 2.0 Release 5A.00 (referred to as 5A) delivery. 5A will be deployed to the four Distributed Active Archive Centers (DAACs) and the System Monitoring and Coordination Center (SMC) as a part of the final pre-launch delivery.

1.4 Status and Schedule

This VDD is submitted as a final document.

1.5 Organization

Except as described below, the format and contents of this document comply with NASA-DID-M600 and NASA-DID-999 as defined in NASA-STD-2100-91. Additional paragraphs and subparagraphs have been added in sections as appropriate to their volume and contents.

- Introduction — Introduces the documents scope, purpose, objectives, status, schedule, and document organization.
- Related Documentation — Provides a bibliography of reference documents for the VDD organized by parent and binding subsections.
- Product Description — Describes the overall capabilities of the ECS Version 2.0 system with emphasis on the Release 5A software.
- Inventory — Tar file listings for Release 5A, documentation, and archive tape.

- Non-conformance Status — Discusses known problems with Release 5A and lists Non-conformance Reports (NCRs) with open status and NCRs closed with this release.
- Appendices — Contain supplemental information such as: adaptation data, installation notes, 5A limitations, and tar file listings.
- Abbreviations and Acronyms — Contains an alphabetized list of the definitions for abbreviations and acronyms.

2. Related Documentation

2.1 Parent Documents

The parent document is the document from which this Version 2.0 Release 5A.00 Version Description Document (VDD) for the ECS Project scope and content are derived.

CM-1-020 Version Description Document (VDD) Preparation Guidelines, ECS
Project Instruction

CM-1-031 Developed Application Versioning, ECS Project

3. Product Description

The following section describes the overall capabilities the ECS Version 2.0 system with emphasis on the Release 5A.00 ECS software. For a complete lists of the features and capabilities by iterations incorporated in the Release 5A see the ECS Verification database web site at:

<http://satc.gsfc.nasa.gov/ECSV/ecsvpage.html>

3.1 Version 2.0 General Capabilities

Version 2.0 is the initial formal version beyond the Testbed. Version 2.0 capabilities include all functions critical to mission success at launch and for initial science activities related to support of the AM-1 and Landsat-7 satellites and their instruments. The Release 5A.00 will be delivered to the DAACs as a part of the final pre-launch delivery. For a detailed description of Version 2.0 capabilities and component descriptions refer to *Release 5A Segment/Design Specification for the ECS Project* (305-CD-500.)

3.1.1 ECS Custom Software Components

The Version 2.0 custom software include:

- Client Subsystem (CLS)
- Communication Subsystem (CSS)
- Data Management Subsystem (DMS)
- Data Processing Subsystem (DPS)
- Data Server Subsystem (DSS)
- ESDT
- Ingest Subsystem (INS)
- Interoperability Subsystem (IOS)
- Management Support Subsystem (MSS)
- Planning Subsystem (PLS)
- Toolkit
- V0_Client
- COM

3.2 Overview of 5A Capabilities

Release 5A will be installed at the GSFC, LaRC, EDC, and NSIDC DAACs. It contains all the capabilities from previous iterations, plus the additional capabilities described in Table 3-1. In addition, the 5A delivery provides Y2K compliance capability.

The new capabilities provided with the Release 5A include:

Table 3-1. Summary of 5A Capability (1 of 2)			
Capability Key	Category	Subcategory	Capability Statement
121	Ingest	Data Type Preprocessing	ASTER L1A/L1B data types - GPOLYGON
171	Ingest	Internal	Orbit data from FDD
200	Ingest	Data Type Preprocessing	Sage III data types - MOC
201	Ingest	Data Type Preprocessing	Sage III data types - SCF
210	Ingest	Data Type Preprocessing	DAS data types for 5A
215	Ingest	Data Type Preprocessing	Standard ECS Product Ingest (LaTIS, MOPITT, SCF, cross-mode production)
216	Ingest	Internal	Distribution Ingest - LaTIS II
290	Ingest	Internal	ASTER DEM (interactive)
590	Planning	Production Planning Workbench	Production rule: Optional DPRs
1315 (pending)	Processing		DPREP Replacement Ephemeris Data
1954	Data Management	Data Dictionary	Mtool Collection to Info Mgr mapping and Insert/Delete Info Mgrs
1956	Data Management	Data Dictionary	Mtool Attribute Editing
2220	SDSRV	Search / Inspect	Truncate results message
2460	SDSRV	Internal	Handle variations on search areas and product-specific spatial representations

Table 3-1. Summary of 5A Capability (2 of 2)			
Capability Key	Category	Subcategory	Capability Statement
2604	SDSRV	Add ESDTs	Move EVT file to the database
2615	SDSRV	Internal	Out of Memory Condition
Not Available	SDSRV	Fault Recovery	Persistent Asynchronous Acquires
3486	Database Development Management	System Administration	SQL Monitor
3790	System Mgmt	SMC	Trouble ticket consolidation using Remedy
3881	System Mgmt	Mode Management	Recovery from faults identified in failure/recovery walkthrough - Mode Management
3913	System Mgmt	Manage Applications	HPOV - Allow for cross machine startup/shutdown.
4390	Infrastructure	Subscription Services	Encryption of FTP password

3.3 Detailed Objectives

Table 3-2. 5A Detailed Description (1 of 3)		
Functionality	Capability	Description
INGEST	Landsat 7 IGS Metadata 0 (Capability 0425)	The capability to ingest Landsat 7 IGS Metadata 0 data.
INGEST	MOPITT data types	The capability to ingest MOPITT data types via the SIPS interface.
INGEST	MODAPS data types	The capability to ingest MODAPS data types via the SIPS interface.
INGEST	Additional DAS data types (Capability 0211)	The capability to ingest DAS data types.

Table 3-2. 5A Detailed Description (2 of 3)

Functionality	Capability	Description
INGEST	EMOS (Capability 10004)	The capability to ingest the daily activity schedule from EMOS.
INGEST	Orbit data from FDD	The capability to ingest FDD orbit data via polling with DR.
INGEST	Sage III data types - MOC	Perform direct insert SAAGE_III MOC granules to SDSRV via Polling w/DR.
INGEST	Sage III data types - SCF	Perform direct insert of SAGE_III_SCF granules to SDSRV via Polling w/DR.
INGEST	DAS data types for 5A	The capability to ingest and process SIPS science granules together with a associated browse, and/or a QA, and/or PH.
INGEST	Standard ECS Product Ingest (LaTIS, MOPITT, SCF, cross-mode production)	Provide the capability to ingest standard ECS products, including LaTIS, via the SIPS interface.
INGEST	Distribution Ingest - LaTIS II	The capability for a user to ingest data already resident in the ECS system across a mode in the same DAAC or across DAACs .
INGEST	ASTER DEM (interactive)	The capability to ingest ASTER DEM 14K
PDPS	Production rule: Optional DPRs	TBS
PDPS	DPREP Replacement Ephemeris Data	The capability to processes orbit, attitude, and ephemeris data into toolkit native format and HDF
Data Management	Mtool Collection to Info Mgr mapping and Insert/Delete Info Mgrs	The capability for operators to insert and delete rows within the DmDdInfoMgrCollXref via the MaintenanceTool GUI.
Data Management	Mtool Attribute Editing	This enables the user to add a new ECS Attribute to the data dictionary database. Further, editing and deleting an existing ECS attribute is possible.
SDSRV	Truncate results message	SDSRV has a configuration file that limits the number of granules returned from a single search request. In the event this limit is reached, a message indicating search results truncation is included in the client's request results.
SDSRV	Delete from Archive	A new SDSRV service that deletes science granule data from the archive without deleting the corresponding metadata. This service belongs to the ESDT category (same as other delete services), its service name is "DELETEFROMARCHIVE" (DsCGeDeleteFromArchive).

Table 3-2. 5A Detailed Description (3 of 3)

Functionality	Capability	Description
SDSRV	Handle variations on search areas and product-specific spatial representations	This capability adds a new logical attribute name (SpatialCoverage) to the list of searchable Inventory Metadata. The ESDT Descriptor files contain a new Collection Level Metadata attribute named spatialSearchType, which identifies the spatial type used at the Inventory level
SDSRV	Move EVT file to the database	Currently, SDSRV stores event information in flat files. This capability will move that information to the SDSRV database.
SDSRV	Out of Memory Condition	SDSRV reserves a block of memory for its process during startup, and monitors the usage of this memory each time a request is received. If the percentage of free memory falls below the LOWMEMORY setpoint, all low priority requests are rejected. Once the VERYLOWMEMORY setpoint is reached, all requests are rejected.
SDSRV	Persistent Asynchronous Acquires	SDSRV is modified to persist Asynchronous Acquire Requests that don't include a callback function.
SYSTEM MANAGMENT	Trouble ticket consolidation using Remedy	This capability enables the Remedy Action Request System (ARS) (COTS) at the DAACs and the SMC to automatically forward a copy of a closed trouble ticket to the SMC's Remedy ARS ECS Closed Trouble Ticket database for ECS trouble tickets consolidation purposes.
SYSTEM MANAGMENT	Recovery from faults identified in failure/recovery walkthrough - Mode Management	This enables the user to add or remove a mode from the Active Mode file. The Subagent running on the ECS host will detect this change and notify OpenView which will update the submaps to reflect the change of status
SYSTEM MANAGMENT	HPOV - Allow for cross machine startup/shutdown.	The capability to startup and shutdown an entire mode via HPOV.
Infrastructure	Encryption of FTP password	Encryption of the SBSRV FTP password in the SDSRV database.

4.2 Physical Architecture

The Physical Architecture of a system is the allocation of the software components to the available hardware configuration. It should be noted that the Physical Architecture could vary from installation to installation. Indeed this will be the case for the ECS.

4.2.1 COTS Software Version Baseline

The data in Table 4-1 was extracted from the *COTS Software Version Baseline Report* (910-TDA-603 Rev 00). The date of configuration was July 13, 1999. Table 4-2 provides the Patch Baseline data.

PATCH NAME	CAT	RESP ORG	VARIANT	MFR/DEV NAME	VERSION	DESCRIPTION
PHCO_8935	C			Hewlett Packard Corp		Fix for vxfs volcopy with LFS disks.
PHCO_9508	C			Hewlett Packard Corp		Cumulative kermit(1) patch
PHCO_9533	C			Hewlett Packard Corp		gencat(1) cumulative patch
PHCO_9534	C			Hewlett Packard Corp		dumpmsg(1) cumulative patch.
PHCO_9535	C			Hewlett Packard Corp		findmsg(1) cumulative patch.
PHCO_9543	C			Hewlett Packard Corp		Allows umount to unmount a Stale NFS FS
PHCO_9597	C			Hewlett Packard Corp		chfn(1) cumulative patch
PHCO_9602	C			Hewlett Packard Corp		chsh(1) cumulative patch
PHKL_10163	C			Hewlett Packard Corp		fix EBUSY error if pgrp chg'd after async open
PHKL_10259	C			Hewlett Packard Corp		UFS disk space leak when mmap()'ing small files
PHKL_10460	C			Hewlett Packard Corp		Fix for pfdat page unlocking
PHKL_10759	C			Hewlett Packard Corp		hpux(1m) boot loader can not boot over PCI LAN
PHKL_10801	C			Hewlett Packard Corp		fuser(1M) misses processes blocked on fifo open
PHKL_11578	C			Hewlett Packard Corp		Fix "Audio hardware clock dead" panic
PHKL_12059	C			Hewlett Packard Corp		HFS (UFS) cumulative patch
PHKL_12339	C			Hewlett Packard Corp		VxFS (JFS) fsck fix and mount perf improvement
PHKL_12447	C			Hewlett Packard Corp		SystemV semaphores cumulative patch
PHKL_12513	C			Hewlett Packard Corp		Enable MP on systems faster than 214 MHz
PHKL_12763	C			Hewlett Packard Corp		HIL year > 2000, HIL hang, HIL bad packet patch
PHKL_12841	C			Hewlett Packard Corp		mouse synchronization fixed for 744/165L
PHKL_12951	C			Hewlett Packard Corp		kernel stack overflow panic patch
PHKL_12956	C			Hewlett Packard Corp		devswap_strategy not check B_ERROR flag in buf
PHKL_13011	C			Hewlett Packard Corp		Fix for panic in proc_close()
PHKL_13326	C			Hewlett Packard Corp		added support for PCI Mux on wsio cdio
PHKL_13611	C			Hewlett Packard Corp		Message queue hang
PHKL_13872	C			Hewlett Packard Corp		diag2 heavy I/O log, prevents diaglogd abort
PHKL_13967	C			Hewlett Packard Corp		vasusage, ACE 2 bundle cumulative patch
PHKL_14282	C			Hewlett Packard Corp		select() performance; process hang
PHKL_14288	C			Hewlett Packard Corp		Illegal vnode op, bad dir on CD_ROM cause panic
PHKL_14375	C			Hewlett Packard Corp		Data page fault from lpmc on PA 2.0 systems
PHKL_14435	C			Hewlett Packard Corp		New default NFS diskless client kernel
PHKL_14564	C			Hewlett Packard Corp		ITE Locking, VISUALIZE-FX support (MP), FX4 hang
PHKL_14852	C			Hewlett Packard Corp		PC floppy cumulative patch
PHKL_15240	C			Hewlett Packard Corp		Header file conformance for types.h and unistd.h
PHKL_16750	C			Hewlett Packard Corp		SIG_IGN/SIGCLD,LVM,JFS,PCI/SCSI cumulative patch
PHKL_8376	C			Hewlett Packard Corp		Fix vmtrace bug.
PHKL_8444	C			Hewlett Packard Corp		fix bad count of blocked processes in vmstat
PHKL_8693	A			Hewlett Packard Corp		sys/time.h fix for select(2)/C++ defects
PHKL_8779	C			Hewlett Packard Corp		panic on GSC/HSC MP machines on kernel semaphore
PHKL_9270	C			Hewlett Packard Corp		Fix for current path name in proc/thread
PHKL_9940	C			Hewlett Packard Corp		VxFS fsadm resize failure when growing >2Gb
PHNE_10010	C			Hewlett Packard Corp		ftpd patch
PHNE_10043	C			Hewlett Packard Corp		cumulative talk patch
PHNE_10494	C			Hewlett Packard Corp		BIND 4.9.6 components
PHNE_10761	C			Hewlett Packard Corp		asio0 serial port patch
PHNE_10770	C			Hewlett Packard Corp		dhcpcclient for 100BT lan

Patch Category: C = Core (installed on all machines) H = Hardware dependent (install where needed)
A = Application dependent (install where needed) O = Other (install where needed)

4.3 Tar File Listings

See Appendix D for the tar file listings. The content of the tar files are listed by Checksum, Blocksize (512 bytes per block), and the filename.

This page intentionally left blank.

5. Non-Conformance Status

5.1 Known Problems

This section contains the list of problems closed (Section 5.2) and problems that remain unresolved (Section 5.3). The NCR list in sections 5.2 and 5.3 was last updated Wed Jul 28 17:37:47 EDT 1999. The lists of problems were found and recorded during the 5A Integration effort and captured in the formal problem tracking system, Distributed Defect Tracking System (DDTS).

Section 5.4 provides a text summary of the both Open and Close NCRs for Release 5A. The summary report include the NCR ID, Title (Description), Test Site, Severity, Status, Problem Description, and Resolution. To obtain a detailed description of the NCRs, the DDTS system can be accessed from the following WEB page:

<http://newsroom.gsfc.nasa.gov/ddts/>

DDTS Problem Severity Definitions, on a 1-5 scale, are defined as follows:

- 1 Catastrophic and unrecoverable!
Example: system crash or lost user data.
- 2 Severely broken and no workaround.
Example: can't use major product function.
- 3 A defect that needs to be fixed but there is a workaround.
Example: user data must be modified to work.
- 4 A defect that causes small impact. Easy to recover or workaround.
Example: error messages aren't very clear.
- 5 Trivial defect or enhancement request.
Example: bad layout or misuse of grammar in manual.

5.2 NCRs Closed in Release 5A

Section 5.2 contains a list of all NCRs that represent code or files that were merged during the 5A integration effort. This criteria used to generate this list of NCRs include:

1. State = T (Assigned-Test), V (Verified), C (Closed)
2. Subsystem leads review the list for completeness and accuracy.

The following list contains the Closed NCRs in numerical order by severity:

NCR	Subsystem	S	D	Site	NCR Title
17812	PLS	1	C	EDF	Missing if statement in PIPgeC, GenerateDprs(...)
19239	DPS	1	C	EDF	Incorrect Category Specified For DFA Command
19461	CSS	1	C	EDF	Login proxy return null session ID back
19846	DDIST	1	C	EDF	DDIST GUI will not run with new malloc functionality in Si library
20325	DDIST	1	C	Mini-DAAC	Pull Path name not included in the notification sent to the requestor
20356	INGEST	1	C	VATC	Copy of .meta file to staging disk error for D3 Ingest
20365	ESDT	1	C	EDC	Order stops during reformatting
20388	PLS	1	C	VATC	SubServer: Looses notifications and communication if Sub Mgr down
20490	INGEST	1	C	VATC	EcCsFtpScript problem concerning Drop 4PY AM1ANC Remote Ingest
20491	PLS	1	C	EDF	PRE: Core dumps on Spatial Query
20495	DPS	1	C	EDF	SSIT: Cannot insert Statics with Metadata Queries
20500	DMS	1	C	EDC	V0 GTWAY cannot both send cost and acquire
20516	INGEST	1	C	GSFC	Grib data type failed with multiple granules in PDR
20603	CSS	1	C	EDF	EcPISubMgr fails to start up with error ds_add_entry, error 10
20613	INGEST	1	C	VATC	The copy script for AM1ANC data was not delivered/installed in Drop 4PY
20628	STMGT	1	C	EDF	Pull Monitor leaks file descriptors on startup
20643	DPS	1	C	VATC	Destaging can fail but job completes w/ success in Autosys
20656	INGEST	1	C	LaRC	ICT3 - MOP00TBL is not support in the database
20735	DMS	1	C	EDC	V0ToEcsGateway core dumps during submitting orders
20751	DPS	1	C	Mini-DAAC	SSIT: Multiple Output Logical IDs can't use same MCF
20835	COTS	1	C	EDC	EcDsStArchiveServer not killing child EcUtCopyExec processes
20893	DTS	1	C	EDC	SDSRV to HDFServer queue handling
20894	INGEST	1	C	EDC	Ingest/SDSRV mcf thread seems to hang
20895	STMGT	1	C	EDC	staging disk allocation miscalculated
21140	PLS	1	C	EDF	PIDataGranule does not correctly initialize.
21340	INGEST	1	C	VATC	Ingest of AST_L1B data fails during Preprocessing
21387	ESDT	1	C	EDC	Ordered Landsat 7 scene has inconsistent MTP
21529	PLS	1	C	EDF	PRE- Takes too long to generate PR for MISR
21565	DPS	1	C	EDF	Currently delivered ODLs and Data for DPREP is bad
21583	PLS	1	C	EDF	PRE: MISR MISQA Granules are given same granule Id
21613	INGEST	1	C	GSFC	GSFC/SMC EcInCopyAM1ANC script fails

NCR	Subsystem	S	D	Site	NCR Title
21783	PLS	1	C	EDF	PRE: Multiple meta data granule query was broken for MISRLIKE
21878	INGEST	1	C	Mini-DAAC	Preprocessing error received for good NCEP04 data
21963	PLS	1	C	LaRC	Deadlock - Reduce duration of DPR create transaction
22629	ESDT	1	C	EDC	OPS: Scenes from subinterval over pole
22686	DPS	1	C	LaRC	Can't run DPREP
22755	IOS	1	C	VATC	ESDT failure for AP and QA ESDTs in the VATC TS1
22767	DTS	1	C	Mini-DAAC	Metadata validation fails when inserting granule
22782	DTS	1	C	VATC	SDSRV DB Missing correct ProcGetFileStorage
22783	PLS	1	C	EDF	PathNumber: Needs to be 3 digits when capairing with DSS value
22791	CSS	1	C	VATC	Static message "In EcMpMsgPsngrCtrl Constructor"
22822	DTS	1	C	EDF	SDSRV coredumps during cleanup after L7 acquire
22823	PLS	1	C	EDF	PRE: Fails to retrieve shifted data if multiple logids for one datatype
22836	STMGT	1	C	LaRC	Shared data in DB Connection Manager not protected properly
22883	INGEST	1	C	VATC	EMOS polling does not work in the VATC
23101	CSS	1	C	EDF	SBSRV posted event UR to IOS server with trash characters.
23124	INGEST	1	C	VATC	Can not verify time range of Definitive Orbit Data matches the time rang
23149	DMS	1	C	EDF	VOGW: When creating an order, null order id is sent to MSS
23157	MSS	1	C	EDF	OrderManager: server does not return orderid to V0ToECSSGateway
20036	PLS	1	T	Mini-DAAC	Extra entries for ESDT with "SingleDateTime" group were created when que
21238	ESDT	1	T	EDF	Insert failure for L70RWRS
20596	INGEST	1	V	EDF	5A Installation Problems for Ingest
20606	PLS	1	V	EDF	PRE fails to select time misaligned orbit based granules
21153	PLS	1	V	Mini-DAAC	GranuleMatching fails for L0 files < 1 orbit duration
11360	DPS	2	C	EDF	QA should get datatypes and science data server UR from Advertising
12311	IOS	2	C	LaRC	Tools and tarfiles needed for LARC Installation and Checkout
14779	SysBld	2	C	LaRC	OPS Default Mode Leakage in EcCoAssist
15900	DDIST	2	C	EDF	confusing messages in ALOG file.
16806	STMGT	2	C	GSFC	Stmgt install needs more definition
16820	STMGT	2	C	EDC	Email from system missing essential information
16858	MSS	2	C	EDC	MSS E-mail .iu's and .pkg's not correct
16863	SDSRV	2	C	VATC	No Notification if Subsetting/Reformatting Fails
16882	CSS	2	C	EDF	MOJO ECS Assist files do not exist

NCR	Subsystem	S	D	Site	NCR Title
16883	CSS	2	C	EDF	MOJO Code not being built by Nightly Build
16908	CSS	2	C	EDF	Mojo: .cfg file has incorrect name for keyfile
17039	CSS	2	C	EDF	MOJO AdsrvProxy crashed when a malformed adver search was received
17041	DMS	2	C	EDF	DDICT DB Initialization need to add CLIENT info manager
17195	CSS	2	C	EDF	MOJO Search proxy should not expect serverUR from JESS
17363	INGEST	2	C	VATC	EcInGran core dumps when Preprocessing a bad NCEP04 data file
17388	CSS	2	C	EDF	MOJO core dump in Inspect
17470	MSS	2	C	EDC	HPOV inconsistent in bringing up/down servers via Mode
17493	CSS	2	C	EDF	MOJO: The search inspect proxy fails on a regular inspect
17721	CSS	2	C	EDF	encrypt directory missing in the top level Makefile
17766	CSS	2	C	EDF	ACQUIRE_PRIORITY has to be defined for EcSbSubServer in its CFG file
17775	CSS	2	C	EDF	MOJO Order/Request Proxy message protocol needs to be changed
18050	CSS	2	C	EDF	MOJO Order Proxy message protocol has a typo in Home
18262	ESDT	2	C	EDF	ESDT descriptors need SpatialSearchType attribute
18264	ESDT	2	C	EDF	ESDT descriptors need DeleteFromArchive service
18406	DPS	2	C	Mini-DAAC	Install/Toolkit: Sym links missing on science processor
18464	CSS	2	C	Mini-DAAC	ContributionDriver : Removal of Adverts by LIKE may give wrong results
18979	PLS	2	C	EDF	Makefiles do not use make.option Macros for RW or OODCE paths/libraries
19017	CSS	2	C	EDF	MOJO search via LIM can not get granules back
19034	MSS	2	C	NSIDC	HP OPENVIEW : Problem with Server Icon State
19035	MSS	2	C	NSIDC	HP Openview : Server Status is not reliable
19057	ESDT	2	C	EDF	Contact time needs to be in the constraint in L7 format search
19057	ESDT	2	C	EDF	Contact time needs to be in the constraint in L7 format search
19067	CSS	2	C	EDF	MOJO multi-side inspection can't retrieve the inspected results back
19099	CSS	2	C	EDF	MOJO Login Proxy error message doesn't comply the message protocol
19190	PLS	2	C	LaRC	EcPISubMgr Not Releasing Database Tables
19218	CSS	2	C	EDF	Mojo can't handle if number of granules for inspection exceeds
19329	DPS	2	C	EDF	AM-1 DPREP needs to initialize QA summary counts.
19339	DTS	2	C	EDF	Metadata produced on acquire cannot be used to reingest data

NCR	Subsystem	S	D	Site	NCR Title
19370	DPS	2	C	EDF	AM-1 DPREP utility EcDpPrAm1FddAttitudeDPREP QA summary error.
19474	IOS	2	C	VATC	IOS Server searches gives inconsistent responses
19507	MSS	2	C	EDF	HPOV:Shutdown via mode icon erroneously shutdown servers in other modes
19512	CSS	2	C	EDF	Mojo failed to handle the value with the spaces in the message from JESS
19549	INGEST	2	C	Mini-DAAC	GUI needs to update Request State when a Media Ingest request fails
19580	CSS	2	C	EDF	Y2K: EcTiTime does not always provide simulated time.
19619	Toolkit	2	C	GSFC	MODIS PGE03 fails when shared mem is on
19674	ESDT	2	C	EDC	Invalid directory paths appear in IAS order L7 data
19703	DDIST	2	C	EDF	Default database name should be changed for DDIST
19743	PLS	2	C	EDF	Metadata Query and Most Recent Granule combination
19821	MSS	2	C	Mini-DAAC	File Ownership problem with Install Setup Scripts
19915	DTS	2	C	EDF	Automatic restart of HDF EOS Server
19922	DPS	2	C	EDF	AM-1 DPREP utilities saves obsolete QA parameters.
19952	DMS	2	C	EDF	V0GW intermittently shows Product Request FAILED when acquire succeeds
20000	DPS	2	C	EDF	SSIT: Need to fix delivery warnings
20012	PLS	2	C	EDF	PRE: Not producing MODIS DPRs
20038	CSS	2	C	EDF	SBSRV GUI should use a different program ID from its server.
20068	INGEST	2	C	EDF	Ingest Short DDN time stamp differs from Long DDN when null
20096	DMS	2	C	EDC	VOSOT: Two Datatype Search with Time Limit Failed
20100	INGEST	2	C	EDF	Default values for directories in mkcfg not correct
20123	MSS	2	C	Mini-DAAC	Files overridden during EcCoAssist install with mkcfg set to default.
20129	CSS	2	C	EDF	.iu files are being installed multiple times
20147	MSS	2	C	EDC	Multiple servers running
20182	EMOS_MM_TEST	2	C	EOC	Graphical Timeline Plot of Mission Schedule Failing
20201	CSS	2	C	EDF	EcTiTime:improper directory name passed to 'cdscp show object'
20248	ESDT	2	C	EDF	Add PGEVersion to all MISR ESDTs
20338	DPS	2	C	EDF	AM-1 DPREP angle limits check applied to wrong angles.
20348	DPS	2	C	GSFC	SubMgr: Core dump during testing
20355	STMGT	2	C	GSFC	Anonymous FTP or not anonymous FTP?
20359	PLS	2	C	EDF	PWB window core dump, when the first plan is deleted...

NCR	Subsystem	S	D	Site	NCR Title
20366	STMGT	2	C	EDC	InsertFileFailed message from DistributionServerDebug.log--GUI says
20380	DPS	2	C	EDF	AM-1 DPREP needs corrections to PCF run-time parameters.
20385	MSS	2	C	GSFC	EcCoLogViewer and EcCoMonitorGui being CPU hogs.
20387	STMGT	2	C	EDF	ARCHRESCONFIG file not correct for FTP Dis Server
20402	STMGT	2	C	VATC	DDIST resumes oversized granule request when FTP directory is full.
20430	MSS	2	C	EDC	The EcCoDbSyb_CkErrorLog script is failing due to permission problems
20459	STMGT	2	C	EDF	Manual configuration of logical volume groups overwhelming
20464	DDIST	2	C	EDC	Partial DDIST warm start failure.
20469	PLS	2	C	EDF	PRE: Core dumps when deleting a chain of DPRs
20478	DPS	2	C	EDF	AM-1 DPREP reports the presense of gaps that do not get repaired.
20489	STMGT	2	C	EDF	Invocation of stored procedures which return no values corrupts memory
20496	DTS	2	C	EDF	SDSRV MOC CCA process should exclude partial scenes
20509	DPS	2	C	EDF	AM-1 DPREP utility EcDpPrAm1AncillaryDPREP counts data gaps twice.
20514	MSS	2	C	LaRC	Install Errors Not Reflected In EcCoAssist Install Status
20523	STMGT	2	C	EDC	STMGT : Victims of deadlocks from SQL server do not get retried
20529	PLS	2	C	EDC	PLS : PWB reported a good status even with failures.
20530	DPS	2	C	EDC	DPS : PRONMG deadlock in staging
20557	STMGT	2	C	EDF	Logged errors can overrun buffer, corrupting memory
20566	STMGT	2	C	EDF	ESDT Map contains errors
20575	STMGT	2	C	VATC	Recovery Connect fails between Granule Srvr and Staging Disk Srvr
20584	DTS	2	C	EDF	SDSRV DB database deadlocks during concurrent granule inserts and L7
20590	DPS	2	C	EDF	PRONG Resource Locking Severely Degrades Performance
20591	DPS	2	C	EDF	Job Mgmt. doesn't remove cancelled jobs from jobs-to-be-deleted queue
20592	DPS	2	C	EDF	Failed PGE and jobs with JIL_FAILUR unnecessarily hold job slots
20593	DPS	2	C	EDF	Job Management assigns JIL_FAILUR to wrong DPR
20594	MSS	2	C	VATC	ECS Assist truncating URL's
20600	PLS	2	C	EDF	PRE locks the PDPS database while running MISRLIKE scenario
20610	DTS	2	C	EDF	SDSRV CleanGranules scripts not handling L70R and WRS granules correctly

NCR	Subsystem	S	D	Site	NCR Title
20625	DMS	2	C	EDC	GranulesPerChunk must be > V0 Client Ma of data granules per data set
20634	DMS	2	C	EDC	Reached max concurrent threads in V0ToEcsGateway
20638	DDIST	2	C	EDF	DDist should save "Suspend All" flag in DB.
20662	SDSRV	2	C	EDF	SDSRV DB Dump and restore should be delivered to SDSRV Sybase machine
20674	MSS	2	C	EDF	EcPIDbPatch won't work on 4PY
20676	MSS	2	C	EDF	Sybase Update Statistics needs to be run during nightly dumps
20678	MSS	2	C	EDF	EclnEMAILSVR.pkg should be added to .sitemap for all sites
20689	MSS	2	C	EDF	Error in build of 5A Delivery Tar File
20690	DDIST	2	C	EDC	Out of swap space on e0dis02 due to DDIST GUI
20691	CSS	2	C	EDC	SBSRV GUI require DCE login prior to activating GUI.
20700	Toolkit	2	C	EDF	Bianary files produced by EDC has changed. Requires changes to DEM tools
20709	STMGT	2	C	EDF	Need indexes on DsStBackup to improve performance
20710	STMGT	2	C	EDF	Modify DsStBDelete to include transaction management
20724	DPS	2	C	EDF	PRONG: Missing config parameter prevents programs from running
20726	DPS	2	C	EDF	DPREP: IU file does not deliver renamed DPREP executables
20732	STMGT	2	C	VATC	Staging disk appears full to IngestFTP but is not
20736	PLS	2	C	EDF	PRE: MISR PGE can't get static input
20742	DTS	2	C	VATC	Hdf Server Hangs When SDSRV Terminates
20752	DPS	2	C	LaRC	EcDpAtCheckPCF Cannot Find File pctcheck
20767	DPS	2	C	EDF	AM-1 DPREP must use latest PGS_EPH.h attitude record definition.
20786	INGEST	2	C	VATC	Can't update InExternalDataProviderInfo db table using Ingest GUI
20787	INGEST	2	C	VATC	MOD000 and MOD000X not found in Ingest database tables
20788	DMS	2	C	EDF	V0 Gtway needs to allow global search to proceed
20789	MSS	2	C	VATC	The EclnAppStart Script will not the start the EclnServers
20792	PLS	2	C	EDF	SubsMgr: Can't pick up receiver uuid from config file for OPS mode
20809	CSS	2	C	EDF	Mojo DarSubmitProxy misses parsing the ImplementationUrgency field
20831	ESDT	2	C	EDC	FtpDis Server can ftp only one scene at a time
20834	MSS	2	C	VATC	Install of Valids info from StagingArea not working
20836	STMGT	2	C	EDC	Error creating directory in PullMonitor
20837	PLS	2	C	EDF	PRE/SSIT: Browse scenario is not working properly
20881	DDIST	2	C	EDF	datbase data integrity problem in DDIST Server

NCR	Subsystem	S	D	Site	NCR Title
20882	MSS	2	C	Mini-DAAC	Bug in EcDpAtMgrStart
20885	DPS	2	C	EDF	SSIT: Check HDF IDL Tool failure
20909	DTS	2	C	EDC	MOC script failed to Ftp results to MOC
20914	DMS	2	C	EDC	Field length too long for V0ToEcs Gateway to handle
20922	CSS	2	C	GSFC	SBSRV Lost Notifications
20924	DPS	2	C	EDF	PRONG: Duplicate records in database due to concurrent staging
20935	STMGT	2	C	EDF	Persistent Async Acquire functionality not sending metadata file on rest
20943	CSS	2	C	EDF	In MOJO Retrieve User Proxy, the field DAREXPEDITEDDATA loses a tab
20952	DPS	2	C	EDF	SSIT: Cannot overwrite differentiated Static Granules
20980	CSS	2	C	EDF	Mojo Subscription Proxy failed to construct the qualifier
21039	ESDT	2	C	EDF	ECS Data Model - add Attribute Valids for VerticalSpatialDomainType/Valu
21040	INGEST	2	C	EDF	InFileTypeTemplate table contains redundant FileTypeTemplateKey for GRIB
21072	DPS	2	C	EDF	PRONG: Failed to delete DPR when staging fails
21087	CLS	2	C	EDF	User Profile Gateway looking for AUTHENTICATOR instead of ECS_AUTH...
21092	HDFEOS	2	C	EDF	Ingest has problem with strcpy and memcpy in GDapi.c
21095	DTS	2	C	EDF	HDF EOS Server Imakefile broken for Persist Async Acquire code in STMGT
21108	PLS	2	C	EDF	SubMgr releases DPRs with unsatisfied inputs
21116	CSS	2	C	EDF	Subscription client side constructor do not check expiration date.
21121	MSS	2	C	EDF	SDSRV DB Dump and restore should be delivered to SDSRV Sybase machine
21142	DPS	2	C	LaRC	Job Managment Startup Fails- Error In Consistency Check
21151	ESDT	2	C	EDF	Add ASTERs missing PSAs and correct their QA PSAs names.
21154	ESDT	2	C	EDF	L7 acquires use StagingDiskCopy instead of StagingDiskLink

22725	ESDT	5	T	EDC	4PX26 OPS: Subsetting Fails when Full scene
22726	ESDT	5	T	EDC	4PX26 OPS: SDSRV can not distinguish between LPS
22777	STMGT	5	T	EDF	No way to obtain detailed information about error codes

5.3 Open NCRs

The following list of NCRs was found during the 5A integration and remain unresolved. This list was not totally derived from DDTs. The criteria used to generated this list of NCRs include:

1. State = N (New), A (Review-Assign), or R (ToBeResolved)
2. Finally, Lab Leads and Subsystem personnel review the list for completeness and accuracy

The following list contains the Open NCRs in numerical order by severity

NCR	Subsystem	S	D	Site	NCR Title
19953	PLS	3	R	VATC	PLS: Does not update PGE run time after redefinition via SSIT
20332	DDIST	3	A	EDF	Missing required DDIST ALOG messages.
20429	IOS	3	A	VATC	Display stalled when no moderation group was selected
21419	DTS	3	M	LaRC	SDSRV scripts for install 95k granules for End to End test
21511	PLS	3	M	LaRC	PRE- Takes too long to load orbit based PGE into form

This page intentionally left blank.

Appendix A. Site Specific Data (Adaptation Data)

The ECS Architect's Office maintains the current CCB approved (baselined) site-host map. The document provides a guide as to which ECS functions are deployed and on which specific hardware platforms within the DAAC. The site-host mapping also addresses those test strings located within the Landover EDF, namely the Mini-DAAC and VATC. The data in Table A-1 was extracted from the *Site-Host Map Report* (910-TDA-005 Rev 07) dated 07/12/99.

The site-host mapping is available on the WWW at:

<http://pete.hitc.com>

Outside the Landover EDF, the URL for the ECS Baseline Information System is:

<http://cmdm.east.hitc.com/>

Click on "EBIS" from this page to get to the ECS Baseline Information System page. On this page, click on the "Technical Docs List" button beneath the ECS Technical Documents heading. This page will give a list of technical documents. The document entitled "Site-Host Map" will give a listing of functional servers across the sites. The document entitled "Baseline Install Matrix" will provide a custom code wiring diagram that associates functions across site machines. The .sitemap file will provide mappings of package files and installable units to functional areas.

For more information on the site unique configurations refer to the 920- series documents.

RELEASE NOTES (continued)

1 RELEASE NOTES

This section provides information on operational changes for the <RELEASE> baseline.

1.1 ECS Assistant

The following changes have been made to the ECS Assistant:

- There is a new option on the *Mode and Mode Installation* window which appears after you click the **install** button. At the bottom of the window is a section titled *Use current site specific configuration values*. If you wish to retain your existing site-specific configurable parameters, select the **YES** radio button. If you wish to use the default parameter settings, and completely re-enter your site-specific values, select the **NO** radio button.

NOTE: If **YES** is selected, the installation process assumes that all changes to xxx.CFG files have been mirrored in the appropriate subsystem .cfgparms file. This allows the software to patch the .cfgparms file to update it for the current release. Refer to the SETUP instructions for more information on synchronizing the xxx.CFG and .cfgparms files.

- Mode Preparation: EcCoDeleteMode script
This release introduces the use of the EcCoDeleteMode scrip to clean out a mode prior to starting the installation.

If all hosts are not up and running when this script is executed, you will have to perform the cleanout manually for the unprocessed hosts.

This script does **NOT** delete files and directories in the following locations:

- /usr/ecs/<MODE>/CUSTOM/data
- /usr/ecs/<MODE>/<mount_points>

1.1 SETUP

The following changes have been made to the SETUP procedures:

- Use of the mode cleanout script EcCoDeleteMode has been added.
- Synchronization of the xxx.CFG and .cfgparms files has been added.

1.1 CLS

The Java DAR Tool is not delivered with 5A_Epsilon. It will be included in a later release.

1.1 CSS

N/A

1.1 DMS

N/A

1.1 DPS

The following file changes have occurred at this release:

- /usr/ecs/<MODE>/CUSTOM/bin/DPS/EcDpPrSMFLink has been changed to EcDpPrSMFCopy
- /usr/ecs/<MODE>/CUSTOM/bin/DPS/EcDpPrEMGetAncHeaders has been added

RELEASE NOTES (continued)

1.7 DSS

1.7.1 DSS-DDIST

N/A

1.7.2 DSS-STMGT

The following changes have been made in STMGT:

- It is no longer necessary to save the /usr/ecs/<MODE>/CUSTOM/data/DSS/ARCHRESCONFIG files. These files are re-generated through the install and mkcfg process.
- This release adds support for multi-threaded operation of the EcDsStPullMonitorServer. Refer to the Make Configuration section of the STMGT installation instructions for details on configuring this option.
- The ESDT mapping for logical volume groups has changed to include corrected names for some MODIS ESDTs and to add the AIRS ESDTs

1.7.3 DSS-SDSRV

N/A

1.8 INS

The following changes have occurred at this release:

- A new server, EcInEmailGWServer, has been added.
- A version number must now be included in all PDRs. For this release, the parameter DATA_VERSION must be set to 01.

1.9 IOS

The following changes have been made at this release:

- The EcIoAdSiteSpecific and EcIoAdReplaceHtml scripts should be run **EVERY** time IOS is installed, even if mkcfg is not performed. The instructions have been changed to reflect this.
- Script EcIoAdCGIProgs should be run whenever a mkcfg is performed.

1.10 MSS

N/A

1.11 PLS

N/A

1.12 TOOLKIT

N/A

1.13 V0C

N/A

SETUP – Installation and Configuration (continued)

2 SETUP

This document provides installation instructions for the <RELEASE> baseline. The **SETUP** section describes the activities which must be performed prior to starting the individual subsystem installations.

INITIAL SETUP:

- ___ a) **Review any Workarounds for the Initial Setup phase.**
- ___ b) Using the information provided at PSR, verify/create adequate disk resources on staging server (see Table A)
- ___ c) Create the staging directory for this drop:

```
/net/<server_name>/<distribution_directory>/<stage_directory>/<platform_type>
```

where:

<server_name> is the host name of the staging server (see Table A)

<distribution_directory> is the name of the top-level distribution directory (currently dist at all DAACs)

<stage_directory> is the name of the staging directory for this drop, such as DROP5A_EPSILON

<platform_type> is the architecture-specific directory name (such as SUN, SGI, HP, SGI_TOOLKIT, and SUN_TOOLKIT)

Table A – Staging Servers

PARAMETER	VALUE
EDC	e0mss01
GSFC	g0mss10
LaRC	l0mss10
NSIDC	n0mss01
Mini-DAAC	Fallen
VATC	t1code1

- ___ c) Notify SMC to deliver the drop
- ___ d) Verify drop receipt & file sizes. For **each** <platform_type>:

```
cd /<distribution_directory>/<stage_directory>/<platform_type>  
... verify the <drop_name>_Pkg.tar.gz file is present  
... verify the <drop_name>_Setup.ksh file is present
```

- ___ e) Check disk resources on each installation host.

SETUP – Installation and Configuration (continued)

STAGING (FULL DELIVERY):

Unpack the delivery tar files (this step must be performed under a user account with write permission to <stage_directory> and /tools/common) on the staging server.

The full delivery of the initial 5A release to the DAACs consists of a total of **eight** tar files, as follows:

- Four standard tar files (5A_EPSILON_TOOLKIT_sgi6n32_19990702_074823_Pkg.tar.gz, 5A_EPSILON_hp10_19990701_085948_Pkg.tar.gz, 5A_EPSILON_sgi6n32_19990701_090434_Pkg.tar.gz, 5A_EPSILON_sun5.5_19990701_150223_Pkg.tar.gz)
- One tar file containing the re-delivery of the EcEsdt.pkg package (5A_EPSILON_EcEsdt_sun5.5_19990709_130930_Pkg.tar.gz; see CCR 99-0619). This tar file is **ONLY** required for EDC (for Landsat-7 IGS DLLs) and should be ignored by other sites.
- Three supplemental tar files, one each for the Sun, SGI, and HP, containing fixes for some of the installation problems identified in the test installation of 5A at Goddard (DROP5A_EPSILON_FINAL_PATCH_hp10.tar.gz, DROP5A_EPSILON_FINAL_PATCH_sgi6n32.tar.gz, DROP5A_EPSILON_FINAL_PATCH_sun5.5.tar.gz)

___ a) **Review any workarounds for the Staging (Full Delivery) phase.**

For each <platform_type>:

___ d) Change to the platform staging directory:

```
cd /<distribution_directory>/<staging_directory>/<platform_type>
```

___ e) Execute the setup script:

```
./<drop_name>_Setup.ksh
```

___ f) At the prompt “Press ^C to Cancel, Any Other Key to Continue:”, enter any key **except** ^C.

___ g) At the “Continue? (Y/N):” prompt, enter **Y**

___ h) At the “Update ECS Assist Common Files? (Y/N):” prompt, enter **Y** for all platforms **except** TOOLKIT

___ i) Verify that the staging area location is correct on the line “Install ECS Staging area to:
<distribution_directory>/<staging_directory>/<platform_type>”

___ j) If correct, enter **Y** at the prompt “Enter ^C to Cancel, ‘N’ to change, ‘Y’ to continue:”

___ k) Verify that the following messages are received for each <platform_type>:

```
Cleaning up ... done.
```

```
Delivery setup is complete, you may now install ECS from staging area.
```

___ l) At the prompt “Update ECS Assist Common Files? (Root only)(Y/N)”, enter **Y** for all platforms **except** TOOLKIT.

STAGING (PARTIAL DELIVERY):

___ a) N/A

SETUP – Installation and Configuration (continued)

MODE PREPARATION:

- ___ a) **Review any Workarounds for the Mode Preparation phase.**
- ___ b) Using information provided at PSR, verify that the CUSTOM code partitions for the mode on each host have adequate space for the new installation.
- ___ c) Obtain a full backup of the system and/or mode for all hosts.
- ___ d) Shut down all servers for the mode.
- ___ e) Optional: Save the .cfgparms file(s) for each subsystem on each **primary** host.
- ___ f) Synchronize your xxx.CFG and .cfgparms files on each host. For detailed instructions on this process, refer to the section “*To synchronize the xxx.CFG and .cfgparms files*” in **Setup Notes**.
- ___ g) For full system installations, execute the EcCoDeleteMode script to clean out the CUSTOM code directories for this mode. For detailed instructions on installing and running this script, refer to the section “*To install and run the EcCoDeleteMode script*” in **Setup Notes**.

SETUP NOTES:

To synchronize the xxx.CFG and .cfgparms files:

- ___ a) The install assumes that the .cfgparms files for all subsystems are up-to-date with respect to the corresponding server and GUI xxx.CFG files. If you have manually edited your xxx.CFG files **without** also editing your .cfgparms file, **your .cfgparms file is not up-to-date**. You will need to synchronize **each** subsystem .cfgparms file with your current xxx.CFG files.

For **each** host on which a *mkecfg* is to be performed:

- 1) Determine which subsystems and CSCIs are installed.
 - 2) Change directory to each <subsystem>/<CSCI> directory under /usr/ecs/<install mode>/CUSTOM/.installed.
 - 3) Open the .cfgparms file for <subsystem>/<CSCI>.
 - 4) In a second window, open the xxx.CFG file which corresponds to the first tag in the .cfgparms file.
 - 5) Update the values in the .cfgparms file with the values in the xxx.CFG file if they are different.
 - 6) Save the .cfgparms file.
 - 7) Repeat steps 4 -5 for each tag in the .cfgparms file and its corresponding xxx.CFG file.
 - 8) Repeat steps 2 - 6 for each subsystem.
- ___ d) Optional: re-run any DAAC-specific configuration parameter save scripts.

To install and run the EcCoDeleteMode script:

- 1) Unpack the delivered tar file in its separate directory on the staging server.
- 2) Create the directory /tools/common/ea_temp.
- 3) Copy files as follows:

```
cp <stagingpath>/EcCoScriptlib /tools/common/ea_temp
cp <stagingpath>/EcCoDeleteMode /tools/common/ea_temp
cp <stagingpath>/sitehostlist /tools/common/data/ea
```
- 4) Edit line 49 of the EcCoDeleteMode script to read:

```
EA_LOC=/tools/common/ea_temp
```
- 5) Ensure that all hosts containing CUSTOM code are up and running.

SETUP – Installation and Configuration (continued)

- 6) Login to a server visible to the automounted /tools/common/ea_temp directory, and using the cm<MODE> account, type
EcCoDeleteMode <MODE>
- 7) Respond to the prompts as they appear. You will be prompted twice to verify that you want to continue running the script. The script will automatically open a window to display progress.
- 8) When the script is done, examine the log for out-of- baseline directories and permission problems which prevented the EcCoDeleteMode script from completely cleaning up the host directories. A clean host should contain only the following CUSTOM directories, all owned by cm<MODE>:
 - cfg.<timestamp>
 - .installed
 - data
 - mount points as appropriate
- 9) Login to servers that have not been completely cleaned up and cleanup as needed.
- 10) Remove the /tools/common/ea_temp directory.

WORKAROUNDS:

SETUP:

- ___ a) N/A

STAGING (FULL DELIVERY):

- ___ a) Stage the tar files in the sequence that they are named above – the standard set of platform tar files, followed by the tar file containing the ESDT package (EDC only), followed by the supplemental tar files. Files contained in the supplemental tar files will overwrite files delivered in the standard (original set). The supplemental tar files contain only a very small set of files – they **do not** provide a complete system delivery.
- ___ b) ECSed21462: Copy the EndPoint Manager files for each architecture to their corresponding architecture-dependent common tools directory. (This procedure must be performed using the user account which is the owner of the /automnt/tools/bin/<architecture> directory.)

From the staging server (see Table 1), for **each** <platform_type> and corresponding <architecture> (hpux10, irix6.2, or sun5.5):

```
cd /<distribution_directory>/<stage_directory>/<platform_type>/common/bin
cp EcCoCdsMgr /automnt/tools/bin/<architecture>
cp EcCoEpMgr /automnt/tools/bin/<architecture>
```

- ___ c) ECSed20099: Change file permissions to allow staged installation. This action must be performed as the user account used to stage the delivery.

From the staging server (see Table 1):

```
cd /<distribution_directory>/<stage_directory>/SUN/CUSTOM/dbms
chmod 0744 CSS/EcSbSybaseLogin.sql
chmod 0744 CSS/EcCsSbDbLogins
```

SETUP – Installation and Configuration (continued)

```
chmod 0744 DMS/EcDmSybaseLogins.sql
chmod 0744 DSS/DsDbSybaseLogins
chmod 0744 IOS/EcIoSybaseLogins.sql
chmod 0744 MSS/ddm_mss_support/users/EcMsActDbLogins
chmod 0744 PLS/EcPIDbLogins
```

```
cd /<distribution_directory>/<stage_directory>/SGI/CUSTOM/dbms
chmod 0744 DSS/EcDsStDbLogin
chmod 0744 INS/EcInDbLogin
```

STAGING (PARTIAL DELIVERY):

___ a) N/A

MODE PREPARATION:

___ a) ECSed23520, ECSed23521: EcCoDeleteMode does not delete the TOOLKIT directories /usr/ecs/<MODE>/CUSTOM/daac_toolkit_f77 and /usr/ecs/<MODE>/CUSTOM/AAdata.

You must delete these directories manually on each of your science processor hosts. Deletion of the AAdata directory is optional; AAdata has not changed with this release.

CLS – Installation and Configuration (continued)

3 CLS

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION PREPARATION:

- ___ a) If your site is using the DAAC Desktop (currently EDC and VATC), save the current role file, and restore it after the installation and any required mkcfg are complete. The role file is:
/usr/ecs/<MODE>/CUSTOM/data/MSS/EcTvRolefile.dat
- ___ b) For patch installations where no mkcfg is to be performed, you may save your current site-specific configuration settings by saving the configuration parameters file (/usr/ecs/<MODE>/CUSTOM/.installed/CLS/.cfgparms), and restoring it after the installation is complete:

NOTE: The .cfgparms files must be saved before any other subsystems which include CLS components (such as IOS) are installed on a particular host. The first installation involving a CLS component will overwrite the .cfgparms file.

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Verify that the CLS stageinstall phase has been completed.

CLS – Installation and Configuration (continued)

- ___ g) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcCl

SPECIAL INSTRUCTIONS FOR THE INSTALL PHASE:

- ___ a) All sites should install the following package on the primary and secondary (backup) servers:

.EcCIINTFCSVR.pkg

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each primary host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

<u>Parameter</u>	<u>Server</u>	<u>Recommended Value</u>
V0DataCenterID	UserProfileGateway	...same value as DATA_CENTER_ID in archive.odl file

SPECIAL INSTRUCTIONS FOR CONFIGURING CLS:

- ___ a) Verify that the Netscape Server has been installed and configured for this <MODE>:

```
cd /usr/ecs/OPS/COTS/ns-home/https-<SERVER_NAME>_IOS_<MODE>/config
grep ecs obj.conf
```

- ___ b) If the *obj.conf* file contains ECS- and mode-specific information, the Netscape Server has already been installed and delivered. If not, execute the following instructions (these steps must be performed as the UNIX superuser):

Move the *obj.conf* file to the location needed by the Netscape Server:

```
cd /usr/ecs/<MODE>/CUSTOM/WWW/CLS/config
cp obj.conf /usr/ecs/OPS/COTS/nshome/https-<SERVER_NAME>_CLS_<MODE>/config/obj.conf
```

where:

CLS – Installation and Configuration (continued)

<MODE> is the current mode (OPS, TS1, or TS2)

<SERVER_NAME> is the host name of the primary CLS server

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION

- ___ d) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ e) Verify that keytab files were created for all CLS servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) N/A

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_manager> to start servers.
- ___ c) Click **start** at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIs:

- ___ a) Before starting the Science User GUI, remove any existing ECS preferences files from the user account’s home directory:
cd
unalias rm
rm -rf .ecs
- ___ b) To start the Science User desktop GUI:
cd /usr/ecs/<MODE>/CUSTOM/bin/CLS
source runrc_cls
desktop
...login as user ECSGuest (no password required)
...verify that each icon launches
- ___ c) If EOSView was installed on this host, start the EOSView GUI:

CLS – Installation and Configuration (continued)

```
cd /usr/ecs/<MODE>/CUSTOM/eosview
EOSView
```

COMPLETE SETUP:

- ___ a) Restore any files which were saved prior to, or in, the Installation phase.

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) ECSed16495: Verify that the value of the **ECS_BROWSER** variable is correct in the *runrc_cls* file located in directory */usr/ecs/<MODE>/CUSTOM/bin/CLS*. The correct value is:
 - ___ b) `setenv ECS_BROWSER /tools/bin/netcape/netcape`
- ___ c) ECSed23328: Do not install the *EcCIDAAC.pkg*. This package is no longer delivered and will be removed from the *sitempa* in future releases.

MAKE CONFIGURATION

- ___ a) N/A

DATABASES

- ___ a) N/A

COMPLETE SETUP

- ___ a) N/A

CONFIGURATION NOTES:

The CLS component may require a make configuration phase, even for a patch installation. To determine if a *mkcfg* is required, check the contents of the file:

```
/usr/ecs/<MODE>/CUSTOM/data/CLS/ecs_preferences/actions
```

If you are using the B0SOT test tool, the path names defined in this file should contain the **\$ECS_MODE** variable in the appropriate location. For example, for the B0 search & order tool (B0SOT), the path name should be:

```
$ECS_HOME/$ECS_MODE/CUSTOM/bin/V0_Client/run_bosot.sh $ECS_HOME $ECS_MODE
```

If the **\$ECS_MODE** variable is missing, you must execute the *mkcfg* function of the ECS Assistant to generate correct configuration files.

CSS – Installation and Configuration (continued)

4 CSS

4.1 CSS – Servers and GUIs

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcCs

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

CSS – Installation and Configuration (continued)

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each **primary** host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

N/A

Special Instructions for the Subscription Server GUI Make Configuration

- ___ a) From EcCoAssist Subsystem Manager select **Extensions** and then **CSSGUI**. The Extension Parameter Screen pop-up is displayed.
- ___ b) Enter a value (usually 1) for NoReqArgs and a value (the mode being installed) for MODE. When all parameters have been entered, select **OK**

VERIFICATION:

- ___ a) Check that all CSS CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all CSS servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Obtain the required database parameters:

CSS – Installation and Configuration (continued)

Table A - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	css_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	SubServer[_<MODE>]

Where **SubServer** is the database name in OPS mode, and **SubServer_<MODE>** is the database name in TS1 and TS2.

- ___(a) Obtain the current version of the database:
- ```
> isql -S <server_name> -U <db_user_name> -P <db_user_password> □
> use SubServer[_<MODE>] □
> go □
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y" □
> go □
... note the database version name
> quit
```
- \_\_\_(b) Using EcCoAssist on the primary server, execute the DbBuild function to create the CSS database
- \_\_\_(c) Select file .dbparms within the select a file box, then select Ok in the Database Config box.
- \_\_\_(d) Enter the required parameters in the Database Script Parameters dialogue box.
- \_\_\_(e) Select Ok to start the database build.

### VERIFICATION:

- \_\_\_ a) Review the file EcCsDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- \_\_\_ b) Verify that the current database version is “**Drop 5A**”:
- ```
> isql -S <server_name> -U <db_user_name> -P <db_user_password> □  
> use SubServer[_<MODE>] □  
> go □  
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y" □  
> go □  
... note the database version name  
> quit
```
- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_manager> to start servers.
- ___ c) Click **start** at the Component level; all servers should start.

CSS – Installation and Configuration (continued)

- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIs:

- ___ a) From the command line, start the GUIs which are a part of your component on the appropriate host(s):

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
dce_login <dce-user> <dce-password>
EcSbSubServerGUIStart <MODE>
```

COMPLETE SETUP:

- ___ a) N/A

POST-INSTALLATION:

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.** □
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host (the Common code is installed on all hosts in all modes):

EcCs

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

CSS – Installation and Configuration (continued)

DMS – Installation and Configuration (continued)

5 DMS

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcDm

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

DMS – Installation and Configuration (continued)

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each primary host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

N/A

VERIFICATION:

- ___ a) Check that all DMS CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier.

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all DMS servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Obtain the required database parameters:

Table A - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	dms_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	EcDmDictService[_<MODE>]

Where **EcDmDictService** is the database name in OPS mode, and **EcDmDictService_<MODE>** is the database name in TS1 and TS2.

- ___ c) Obtain the current version of the database:

DMS – Installation and Configuration (continued)

```
> isql -S <server_name> -U <db_user_name> -P <db_user_password>□  
> use EcDmDictService[_<MODE>]□  
> go□  
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"□  
> go□  
... note the database version name  
> quit
```

VERIFICATION:

- ___ a) Review the file EcDmDdDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- ___ b) Verify that the current database version is “4PY.05.Elmira”:

```
> isql -S <server_name> -U <db_user_name> -P <db_user_password>□  
> use EcDmDictService[_<MODE>]□  
> go□  
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"□  
> go□  
... note the database version name  
> quit
```
- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_manager> to start servers.
- ___ c) Click **start** at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIs:

- ___ a) From the command line, start the GUIs which are a part of your component on the appropriate host(s).
To start the Maintenance Tool GUI:

```
cd /usr/ecs/<MODE>/CUSTOM/utilities  
EcDmDdMaintenanceToolStart <MODE>
```

DMS – Installation and Configuration (continued)

COMPLETE SETUP:

- ___ a) If you are using the B0SOT test tool, and if you are configuring the system as your ECS DAAC Data Center (such as ECS-XYZ, instead of ECS-TEST), you should obtain and install the latest B0SOT support files (see Installation Notes for procedures on obtaining and installing the support files).

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) N/A

MAKE CONFIGURATION

- ___ a) ECSEd?????: “no data available” for package options or granule options on EOS Data Gateway search & order.
The EcDmGwPackage.CFG file must be renamed Package.CFG:

```
cd /usr/ecs/<MODE>/CUSTOM/cfg
mv EcDmGwPackage.CFG Package.CFG
```

DATABASES

- ___ a) ECSEd23395: When you install the DMS database there will be errors in the DbBuild log. These errors only reference the version table and do not effect the functionality of the DMS database. To correct the errors you can subsequently apply the 5A database Patch to the just-built DB. To patch the database do the following:
 - ___1 Select EcDmDdDbPatch5A.sql within the select a file box, then select Ok in the Database Config box.
 - ___2 Enter the following parameters in the Database Script Parameters dialogue box:

Table B - Database Parameters

PARAMETER	VALUE
DBO ID	dms_role
Password	<DBO password>
SQL Server Name	xxXXXnm_srvr
Database Name	EcDmDictService[_<MODE>]

Where **EcDmDictService** is the database name in OPS mode, and **EcDmDictService_<MODE>** is the database name in TS1 and TS2.

- ___3 Select Ok to start the database patch.

DMS – Installation and Configuration (continued)

VERIFICATION of the PATCH:

- ___4 Review the file EcDmDdDbPatch.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- ___5 Have the DBA verify the database changes through the DbDesc script for this subsystem.

COMPLETE SETUP

- ___ a) N/A

INSTALLATION NOTES:

Updating Support Files

You must update the B0SOT support files if you are using the B0SOT test tool. The support files must be updated on the **primary** DMS server.

These procedures are for release 5A_Epsilon, and use the version bv139 support files. **Check with your V0 administrator to determine if a newer set of files has been made available since the time these installation instructions were generated.**

- ___ a) Verify that the V0 Client installation and configuration is complete.
- ___ b) Obtain the most recent support files for the V0 Web Client:
cd /usr/ecs/<MODE>/CUSTOM/data/V0_Client
ftp harp.gsfc.nasa.gov
anonymous
<your_email_address>
cd incoming/ECS
binary
get DEP.139.ECS_SPECIAL.DEV.tar.Z
quit
- ___ c) Save the delivered support files directory:
mv sup_files sup_files_delivered<RELEASE>
- ___ d) Unpack and install the new support files:
uncompress DEP.139.ECS_SPECIAL.DEV.tar.Z
tar -xvf DEP.139.ECS_SPECIAL.DEV.tar
rm DEP.139.ECS_SPECIAL.DEV.tar
mv bv139 sup_files
- ___ e) Replace the bv139-delivered archive.odl file with the ECS-delivered file:
cp sup_files_delivered<RELEASE>/archive.odl sup_files/archive.odl
- ___ f) Copy in the ECS_delivered files required for B0SOT which are not delivered with bv139:
cd sup_files
cp ../sup_files_delivered<RELEASE>/WDBTILE .
cp ../sup_files_delivered<RELEASE>/XGaea .
cp ../sup_files_delivered<RELEASE>/acronym.txt .
cp ../sup_files_delivered<RELEASE>/glossary.txt .

DMS – Installation and Configuration (continued)

```
cp ../sup_files_delivered<RELEASE>/gui_help.gdb .  
cp ../sup_files_delivered<RELEASE>/gui_helpHelp.txt .  
cp ../sup_files_delivered<RELEASE>/gui_sysHelp.txt .  
cp ../sup_files_delivered<RELEASE>/notice.html .
```

NOTE: The files in the sup_files directory are not mode-dependent. Once you have installed the updated support files in one mode, you may copy them into subsequent modes:

```
cp -r /usr/ecs/<MODE_A>/CUSTOM/data/V0_Client/sup_files /usr/ecs/<MODE_B>/CUSTOM/data/V0_Client
```

DPS – Installation and Configuration (continued)

6. DPS

6.1 DPS – AI&T

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.

INSTALLATION

- ___ a) N/A

MAKE CONFIGURATION

- ___ a) N/A

DATABASES

- ___ a) N/A

COMPLETE SETUP

- ___ a) N/A

INSTALLATION NOTES:

Database Performance Tuning:

The SQL server at the DAACs is configured for 200 connections. The parameter DpPrAutoSysMaxJobs in file EcDpPrJobMgmt.CFG defaults to 3200. This means that 400 (3200/8) jobs can run concurrently. Each job box will use a maximum of one connections. If 400 jobs are running, it is possible that the database connections will be exhausted. This problem cannot be fixed with code changes. When the number of Sybase connections is not sufficient, then jobs in AutoSys can fail, and possibly deadlock with each other. The DBA can increase the number of connections using the *sp_configure* command. (The SQL server will then need to be restarted.)

AutoSys:

The following AutoSys functions are not currently used:

- Timescape
- Monitor/Browser
- Calendars

DPS – Installation and Configuration (continued)

The error message “*Error! The Sybase Interfaces is not formatted correctly on lin xxx. No server name line preceded this interface line. Data server info cannot be reported*” may be issued when **Hostscape** is selected. This message can be ignored. AutoSys reads two entries for each server (Master & Query). If there are more than two entries for a server, the error message will be displayed. (More than two entries can appear in an Interfaces file for a server if it is a failover server.)

6.3 DPS – SCIENCE PROCESSORS

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all DDIST servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) STMGT database has been built/patched by STMGT install.

START SERVERS:

- ___ a) **Review any Workarounds for the Start Servers phase**
- ___ b) SHARED mode must be installed before starting any servers.
- ___ c) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_name> to start servers.
- ___ d) Click **start** at the Component level; all servers should start.
- ___ e) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIs:

- ___ a) From the command line, start the GUIs which are a part of your component on the appropriate host(s):

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
EcDsDdistGUIStart <MODE>
```

DSS – Installation and Configuration (continued)

COMPLETE SETUP:

___ a) N/A

POST-INSTALLATION:

___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

___ a) N/A

MAKE CONFIGURATION

___ a) N/A

DATABASES

___ a) N/A

START SERVERS

___ a) ECSed23135: The DDIST GUI will not start until at least one order has been processed.

COMPLETE SETUP

___ a) N/A

INSTALLATION NOTES:

___ a) N/A

7.2 DSS – STORAGE MANAGEMENT (STMGT)

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).

DSS – Installation and Configuration (continued)

- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcDsSt

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Obtain the required database parameters:

Table A - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	stmgt_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	stmgtdb1[_<MODE>]

Where **stmgtdb1** is the database name in OPS mode, and **stmgtdb1_<MODE>** is the database name in TS1 and TS2.

- ___ c) Obtain the current version of the database:
> **isql -S<server_name> -U <db_user_name> -P <db_user_password>**
> **use stmgtdb1[_<MODE>]**
> **go**

DSS – Installation and Configuration (continued)

- > **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
- > **go**
- ... note the database version name
- > **quit**
- ___ d) Using EcCoAssist on the **primary** server, execute the **DbBuild** function to create the DSS STMGT database
- ___ e) Select file .dbparms within the select a file box, then select Ok in the Database Config box.
- ___ f) Enter the required parameters in the Database Script Parameters dialogue box.
- ___ g) Select **Ok** to start the database build.

VERIFICATION:

- ___ a) Review the file EcDsStDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- ___ b) Verify that the current database version is **"5A.03.GAMMA"**:
 - > **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
 - > **use stgmtdb1[_<MODE>]**
 - > **go**
 - > **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
 - > **go**
 - ... note the database version name
 - > **quit**
- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

MAKE CONFIGURATION:

- ___ a) Review any Workarounds for the Make Configuration phase.
- ___ b) Execute the mkcfg function of EcCoAssist on each **primary** host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Configure servers using the STMGT GUI (see following section)
- ___ d) Create the logical archive directories and add volume groups (detailed section follows the server configuration instructionsFrom
- ___ e) From the **Extensions** pull-down menu, generate the ARCHRESCONFIG file on all machines where the IngestFtpServer, FtpDisServer, PrintServer, 8mmServer, or D3Server run
- ___ f) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

<u>Parameter</u>	<u>Server</u>	<u>Status</u>	<u>Recommended Value</u>
PULLMONSERVER	FtpDisServer	New	<pull_monitor_server_host>
UserPullHost	FtpDisServer	New	<hostname_for_notification_email>

Changes to the ARCHRESCONFIG file:

- Superfluous parameters removed
- 8MM renamed 8mmTape
- DisFtp renamed FtpDis

DSS – Installation and Configuration (continued)

- Print section reinstated

RECONFIGURING PULL MONITOR FOR MULTI-THREADED OPERATION (OPTIONAL)

Multi-threading is now supported in the EcDsStPullMonitorServer. To use this feature, manually edit the EcDsStPullMonitorServer.CFG file to change the following:

<u>Parameter</u>	<u>Server</u>	<u>Status</u>	<u>Recommended Value</u>
ListenThreads	EcDsStPullMonitorServer	Change	...value between 5 & 10

CONFIGURING THE SERVERS THROUGH THE STMGT GUI:

The servers need to be configured through the STMGT GUI. Bring up the STMGT GUI with the following commands (on the *xxdisnn* Sun machine where the GUI resides):

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
EcDsStmgtGuiStart <MODE>
```

DSS – Installation and Configuration (continued)

The following screen will come up:

Pull Monitor Server Configuration:

The Pull Monitor Server is configured through the following commands:

- ___ a) Ensure that anonymous ftp is configured (refer to ETD 99-105 Rev 01).
- ___ b) In the Storage Config section of the STMG GUI click on Pull Monitor Server.

DSS – Installation and Configuration (continued)

___ c) Click “ADD” button. The following screen will appear:

Pull Monitor Server Configuration

Server ID: EcDsStPullMonitorServer <node>

Original Cache Space (blocks): 999999999

Available Cache Space (blocks): 999992952

Block Size (bytes): 1024

Percent When Full: 95.000000

Threshold: 24.000000

FTP Notify Timer Duration (seconds): 240

Expired Files Confirm Delete: No

Disk Capacity

Fault Disk Level: 85.000000

Warning Disk Level: 65.000000

Root Path: /user_pull_data/<node>/apc/PullDisk/cache

Directory: /user_pull_data/<node>/apc/PullDisk/user

OK Apply Cancel

- ___ a) Server ID: <MODE>
- ___ b) Original Cache Space: 999999999
- ___ c) Available Cache Space: 999999999
- ___ d) Block size: 1024
- ___ e) Percent when full: 95.0000
- ___ f) Expiration threshold: 24.000000
- ___ g) FTP Notify timer: 240
- ___ h) Fault Disk Level: 85.000000
- ___ i) Warning Disk Level: 65.000000
- ___ j) Root Path: /user_pull_data/<MODE>/apc/PullDisk/cache
- ___ k) FTP Notify: /user_pull_data/<MODE>/apc /data/PullDisk/FtpNotify.dat
- ___ l) Directory: /user_pull_data/<MODE>/apc/data/PullDisk/user
- ___ m) Click “Apply” and “OK”

DSS – Installation and Configuration (continued)

Archive Server Configuration:

Multiple Archive Servers need to be configured: DRP1_<MODE>, WKS1_<MODE>, and ACM1_<MODE>.

The Archive Server is configured through the following commands:

- ___ a) In the Storage Config section of the STMGT GUI click on Archive Server
- ___ b) Click “ADD” button. The following screen will appear:

The screenshot shows a dialog box titled "Add Archive Server". It contains the following fields and values:

- Server Id: EcDsStArchiveServer (with a text box containing DRP1_<MODE>)
- Pull FTP Host: xxacgmn
- Pull FTP User Name: cm<MODE>
- Pull FTP Password: *****
- Temp. File Directory: /dss/stk1/<MODE>/Temp
- Volume Group Information section:
 - Volume Group Name: <ESDT_NAME>.nnr
 - Volume Group Path: /dss_stk1/<MODE>/<site_value>

At the bottom of the dialog are three buttons: OK, Apply, and Cancel.

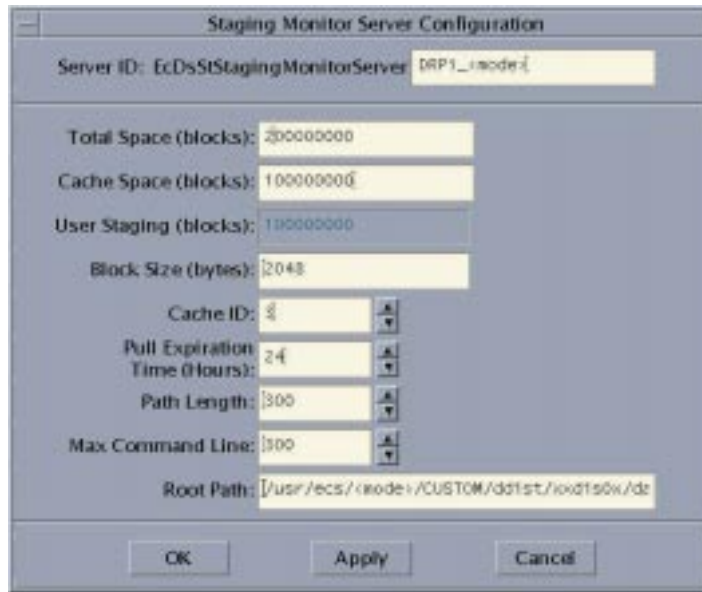

- ___ c) Server ID: DRP1_<MODE>
- ___ d) Pull FTP Host: xxacgmn (machine with package .EcDsStAPSCVR)
- ___ e) Pull FTP User Name: <MODE>user (Unix username)
- ___ f) Pull FTP Password: ***** (Unix password)
- ___ g) Temp. File Directory: /dss_stk1/<MODE>/Temp
- ___ h) **Check to see if this directory exists. If Temp directory does not exist, create one.**
- ___ i) Click “OK”

DSS – Installation and Configuration (continued)

Staging Monitor Server Configuration:

Four Staging Monitor Servers are configured. One for each Server_Id being DRP1_<MODE>, ICL1_<MODE>, WKS1_<MODE> and ACM1_<MODE>. The Staging Monitor Server is configured through the following commands:

- ___ a) In the Storage Config section of the STMGT GUI click twice on Staging Monitor Server.
- ___ b) Click “ADD” button. The following screen will appear:

- ___ c) Server Id: DRP1_<MODE>
DIP1_<MODE>
ICL1_<MODE>
ACM1_<MODE>
WKS1_<MODE>

- ___ d) Total Space <site-specified value>

- ___ e) Cache Space: 100000000

- ___ f) Block size: 2048

- ___ g) Cache Id 3

4

5

6

NOTE: Cache Id's increment automatically as each new server is created.

- ___ h) Pull Expiration Time (Hours) : 24

- ___ i) Path Length: 300

- ___ j) Max. Command Line 300

- ___ k) Root path: **NOTE: Replace xxdrg0x with DAAC related machine, i.e. Goddard = g0drg01**

DSS – Installation and Configuration (continued)

Check to see if this directory exists. If *staging* directory does not exist, create one (as appropriate for your site):

DIP1 - /usr/ecs/<MODE>/CUSTOM/ddist/xxdis0x/data/<site_staging_area>

DRP1 - /usr/ecs/<MODE>/CUSTOM/drp/xxdrg0x/data/<site_staging_area>

ICL1 - /usr/ecs/<MODE>/CUSTOM/a/data/<site_staging_area>

ACM1 - /usr/ecs/<MODE>/CUSTOM/apc/xxacg0x/data/<site_staging_area>

WKS1 - /usr/ecs/<MODE>/CUSTOM/wks/xxwkg0x/data/<site_staging_area>

8MM Server Configuration:

The 8MM Server is configured through the following commands:

- ___ a) In the Storage Config section of the STMGT GUI click twice on 8MM Server
- ___ b) Click “ADD” button. The following screen will appear:

8MM Tape Server Configuration

Server ID: EcDsSt8MMServer_<mode>

Default Block Factor: 20

Blocksize (Bytes): 512

High Capacity (Blocks): 0

Low Capacity (Blocks): 3900000

Time Factor (Seconds): 2.000000

Retries: 3

Sleeptime (Second): 20

Timer Duration: 0

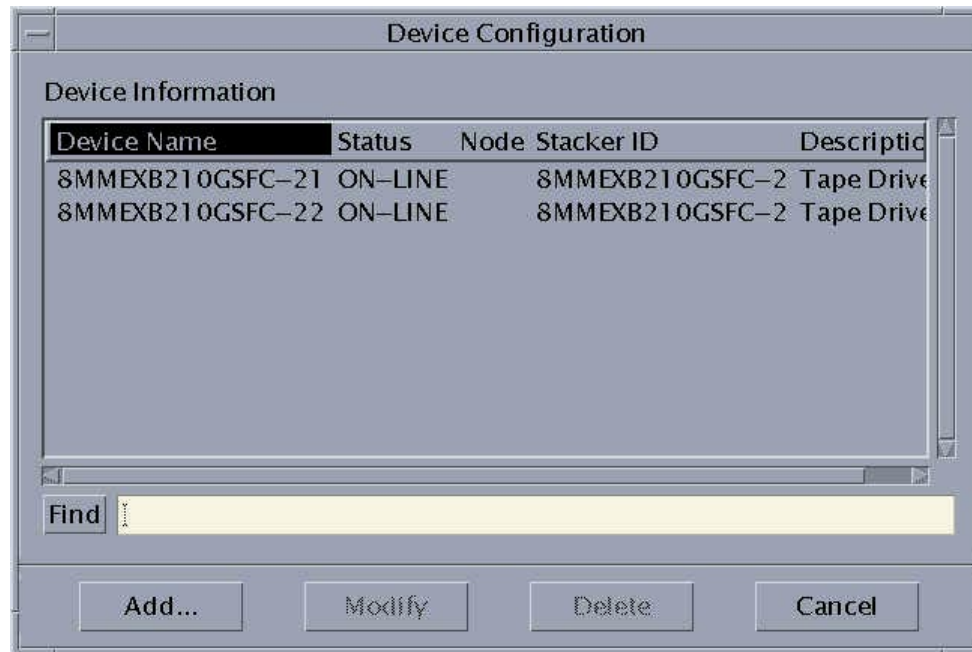

Timer Reload: 0

OK Apply Configure Device Cancel

- ___ c) Server Id: <MODE>
- ___ d) Default Block Factor: 20
- ___ e) Block Size: 512
- ___ f) High capacity: 0
- ___ g) Low capacity: 3900000
- ___ h) Time Factor: 2.000000
- ___ i) Retries: 3
- ___ j) Sleeptime: 20
- ___ k) Timer Duration: 0
- ___ l) Timer Reload: 0
- ___ m) Click “OK” to return to *Storage Management Control GUI*

DSS – Installation and Configuration (continued)

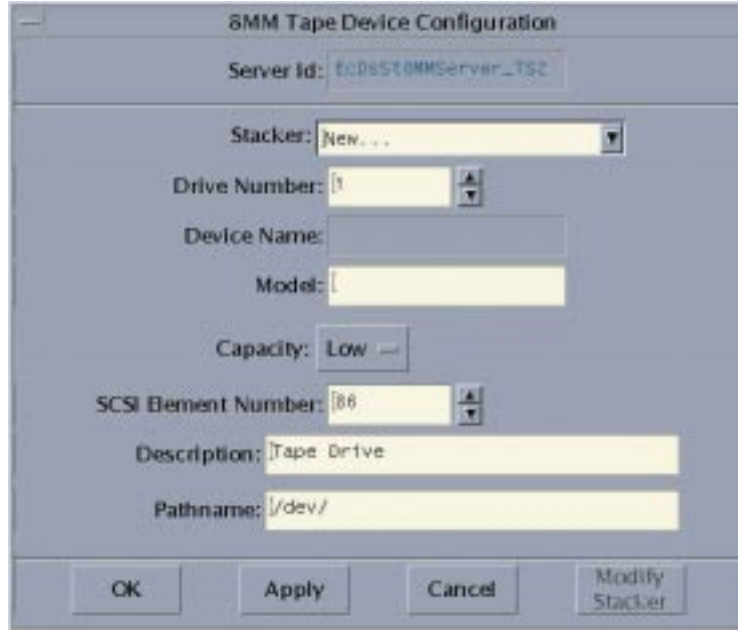

___ n) Click “View Devices”. The following screen will appear:

You will need to configure two tape drives per stacker.

DSS – Installation and Configuration (continued)

For each tape device, click “Add” and the following screen will appear:

The screenshot shows a dialog box titled "8MM Tape Device Configuration". The "Server Id" field contains "EcDsSt08MMServer_TSC". The "Stacker" field is a pull-down menu with "New..." selected. The "Drive Number" field contains "1". The "Device Name" field is empty. The "Model" field is empty. The "Capacity" field is a pull-down menu with "Low" selected. The "SCSI Element Number" field contains "06". The "Description" field contains "Tape Drive". The "Pathname" field contains "/dev/". At the bottom, there are four buttons: "OK", "Apply", "Cancel", and "Modify Stacker".

- O) For the first tape drive, select “New” from the Stacker pull-down menu. The following *Stacker Configuration* window will appear, which must be completed before configuring your tape drive.

For the second tape drive, select the Stacker ID from the *Device Configuration* window, and then complete your tape device configuration (the *Stacker Configuration* window will not appear for the second tape drive).

DSS – Installation and Configuration (continued)

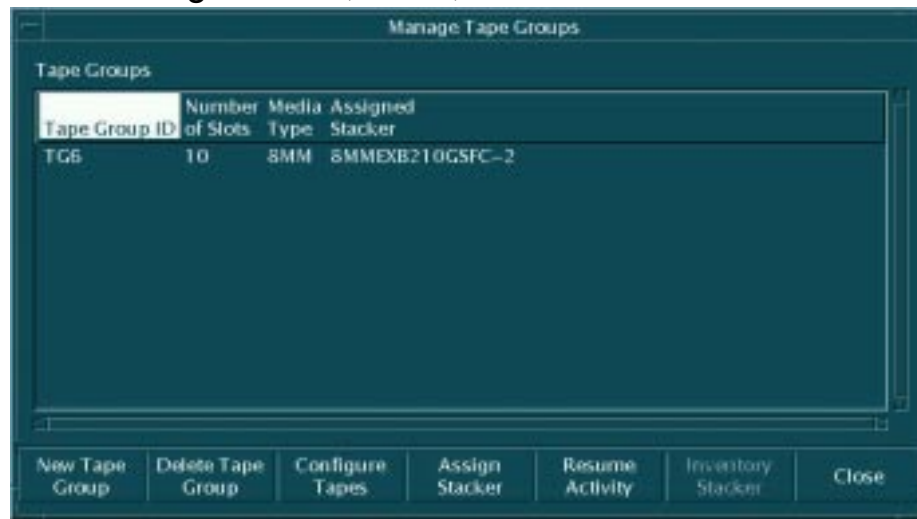

Enter the stacker configuration information:

- ___ a) Stacker_ID: 8MMEXB210<DAAC>-X
- ___ b) Stacker Path: /dev/chgrxx
- ___ c) Medium Type: 8MM
- ___ d) Element number: 86
- ___ e) Stacker number: 1
- ___ f) Number of slots: 10
- ___ g) Click “OK” to return to the *8MM Tape Device Configuration* screen, and configure your tape drive:

- | | <u>First Drive:</u> | <u>Second Drive:</u> |
|-----------------------------|---------------------|----------------------|
| ___ a) Drive Number: | 1 | 2 |
| ___ b) Device Name: | <n/a> | <n/a> |
| ___ c) Model: | EXB210 | EXB210 |
| ___ d) Capacity: | High | High |
| ___ e) SCSI Element Number: | 82 | 83 |
| ___ f) Description | Tape Drive 1 | Tape Drive 2 |
| ___ g) Pathname: | /dev/rmt/1 | /dev/rmt/2 |
- ___ h) After entering the information for a single drive, click “OK”; you will return to the *Device Configuration* window.
 - ___ i) To add another tape drive, click “Add”.

After configuring your tape devices, you must assign a tape group and stacker to write data to the 8MM medium. From the *Storage Management Control* GUI, click the “Resource Schedule” tab. Click “Manage Tapes”; the *Manage Tape Groups* window will appear:

DSS – Installation and Configuration (continued)

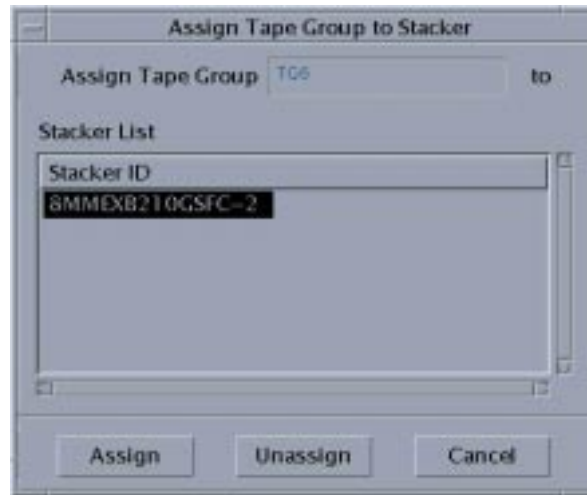

___ a) Click the “New Tape Group” button; the *New Tape Group* window will appear:

- ___ b) Enter the tape group ID: <tape_group_id>
- ___ c) Enter the number of slots 10
- ___ d) Select the Medium Type 8MM
- ___ e) Click “Ok” to return to the *Manage Tape Group* window

DSS – Installation and Configuration (continued)

For each stacker, to create/assign a tape group, click the “*Unassign Stacker*” button of the *Manage Tape Groups* window. The *Assign Tape Group To Stacker* window appears:

- ___ a) Highlight a stacker
- ___ b) Click “Unassign”; this returns to the *Manage Tape Groups* window
- ___ c) Click “Assign Stacker”; this brings up the *Assign Tape Group to Stacker* window
- ___ d) Highlight the stacker
- ___ e) Click “Assign”; this returns you to the *Manage Tape Groups* window
- ___ f) When all stackers are assigned to tape groups, close the *Manage Tape Groups* window

For each tape group created in the previous step, configure the slots to the tape group. In the *Manage Tape Groups* window:

- ___ a) Select <tape_group_id>
- ___ b) Click “Configure Tapes”

DSS – Installation and Configuration (continued)

The following screen will appear:

Slot Number	Element Number	Capacity (GB)	Slot Use	Tape ID
1	1	5	Read-Write	00600
2	2	5	Read-Write	00601
3	3	5	Read-Write	00602
4	4	5	Read-Write	00603
5	5	5	Read-Write	00604
6	6	5	Read-Write	00605
7	7	5	Read-Write	00606
8	8	5	Read-Write	00607
9	9	5	Read-Write	00608
10	10	5	Read-Write	00609

1 1 5 Read-Write Distribution 00600

Ok Apply Assign Capacity to All Tapes Assign Use to All Tapes Cancel

The slots have to be configured once for each stacker.

- ___ a) Slot number: 1
- ___ b) Element number: 1
- ___ c) Select slot use: Read/Write Distribution
- ___ d) Add the tape volume serial number in the *Tape ID* field

(This step is not required do to the work around)

Create 10 slots by increasing the slot number and the element number by 1 each time.

- ___ a) Click “OK”

D3 Server Configuration:

The D3 Server is configured through the following commands:

- ___ a) In the Storage Config section of the STMGT GUI click twice on D3 Server.
- ___ b) Click “ADD” button. The following screen will appear:

DSS – Installation and Configuration (continued)

D3 Device Server Configuration

Server ID: EcDsStD3Server <mode>

Default Block Factor: 512

Blocksize (Bytes): 512

High Capacity (Blocks):

Low Capacity (Blocks): 12048000

Time Factor (Seconds): 2

Retries: 3

Sleeptime (Second): 5

Timer Duration:

Timer Reload:

OK Apply Configure Device Cancel

- ___ c) Server Id: <MODE>
- ___ d) Default Block Factor: 512
- ___ e) Block Size: 512
- ___ f) High capacity:
- ___ g) Low capacity: 2048000
- ___ h) Time Factor: 2.000000
- ___ i) Retries: 3
- ___ j) Sleeptime: 5

- ___ l) Timer Reload:
- ___ m) Click “OK”

CREATING LOGICAL ARCHIVE DIRECTORIES AND ADDING VOLUME GROUPS

For a detailed explanation of the creation of logical archive directories and adding volume groups, refer to the Configuration Notes section.

- ___ a) **Review any Workarounds for the Make Configuration phase (creating logical archive directories).**

DSS – Installation and Configuration (continued)

- ___ b) Edit file `/usr/ecs/<MODE>/CUSTOM/data/DSS/EcDsStESDTMap` to remove entries/information which do NOT pertain to your DAAC.
- ___ c) Configure the volume groups:

`cd /usr/ecs/<MODE>/CUSTOM/utilities`
`EcDsStConfigVolGrps`
- ___ d) Inspect `/dss_stk1/<MODE>` to verify that the expected directories (as outlined in the file `/usr/ecs/<MODE>/CUSTOM/data/DSS/EcDsStESDTMap`) were created

VERIFICATION:

- ___ a) Check that all STMGT CFG, ACFG, and PCFG files were updated during the `mkcfg` process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using `EcCoAssist`, execute the `mkcdsentry` function on all **primary** servers.
- ___ b) If necessary, set the group membership on the keytab files to `<server_group>`.

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all STMGT servers in the directory `/usr/ecs/<MODE>/CUSTOM/security`.

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. `EcCoAssist` should be running as user `<server_name>` to start servers.
- ___ c) Click **start** at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIs:

- ___ a) **Review any Workarounds for the Start GUIs phase.**
- ___ b) From the command line, start the GUIs which are a part of your component on the appropriate host(s):

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
EcDsStmgmtGuiStart <MODE>
```

DSS – Installation and Configuration (continued)

COMPLETE SETUP:

- ___ c) The ownership and permissions for the media server executables (EcDsSt8MMServer and EcDsStD3Server) must be set so that they will execute as root. From an account with *root* privileges, issue the following commands from the Unix command prompt:

```
cd /usr/ecs/<MODE>/CUSTOM/bin/DSS
chown root EcDsStD3Server
chmod u+s EcDsStD3Server
chown root EcDsSt8MMServer
chmod u+s EcDsSt8MMServer
```

Once these commands have been executed, the media servers may be started or killed without root privileges.

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) N/A

MAKE CONFIGURATION

- ___ a) ECSed23510: This NCR (and related NCR ECSed22714) describe a problem using the Storage Management GUI to configure the Storage Management servers. Please review the analysis of NCR ECSed22714 to understand the proper operation of the Storage Management GUI.

DATABASES

- ___ a) ECSed20140: When the database is built, a warning message will be issued that the schema exceeds the row size limit for two tables. The message may be ignored.

COMPLETE SETUP

4. N/A

CONFIGURATION NOTES:

DETAILED NOTES: LOGICAL VOLUME GROUPS

INTRODUCTION

Support for Logical Volume Group IDs has been added with release 4PY. Rather than having to manually configure literally hundreds of ESDTs for a specific volume group, the ESDT short name is now used to specify the logical volume group. Data of that ESDT will be archived to and retrieved from a physical volume group based on the logical volume group definition for the ESDT short name. The ESDT configuration managed by SDSRV no longer requires knowledge about the physical volume groups managed by STMGT. Rather, the ESDT short name is mapped to a physical volume group path in the STMGT database. In a sense, the mapping from ESDT to volume group has been moved from the SDSRV database to the STMGT database.

DSS – Installation and Configuration (continued)

While this simplifies the process of installing new ESDTs, it merely shifts the configuration burden from SDSRV to STMGT. Many Archive Server instances still manage upwards of 350 ESDTs, resulting in a prohibitive number of entries for manual configuration purposes. In order to ease the burden of initial configuration on the operator, a set of transition scripts is now provided with releases 4PY and higher to facilitate the initial population of the STMGT database.

In order to associate a logical volume group ID (ESDT short name) with a physical volume group, three steps must be taken in STMGT:

1. An entry must be created in the STMGT database table `DsStVolumeGroup` associating the ESDT short name (the volume group ID) with the path for the physical volume group.
2. The path for the physical volume group must be created.
3. Using AMASS commands, the path for the physical volume group must be associated with media.

The transition script provided with 4PY fully automates the first two steps, and provides at least partial automation of the third step. Use of the transition script is detailed in the [Usage](#) section below. Additional activities are required if you have existing data in the archive that you wish to migrate to the new volume group structure. The [Data Migration](#) section outlines the steps needed to preserve existing, archived data.

Please note! The logical and physical volume groups created by the transition scripts are based on a baseline document detailing the mapping from ESDTs to physical volume groups, and the mapping from site/host/Archive Server instances to ESDTs which will be stored and/or backed up in a given archive. Although you may manually alter the volume group configuration after the transition script has been run, the only configuration that can be automatically generated is the one specified by the baseline ESDT mapping.

USAGE

The transition script for setting up the ESDT/volume group mapping is called `EcDsStConfigVolGrps`, and can be found in the `ECS_HOME/MODE/CUSTOM/utilities` directory (e.g., `/usr/ecs/OPS/CUSTOM/utilities`). The script takes no command line parameters, as it is fully interactive. The prompts and interaction are described in this section. Prompts from the transition script are shown in `Courier` font, with sample responses in `Arial` font. The script will configure the logical volume groups for a single Archive Server instance on a single host, so you will probably need to run the script several times at your site (once per server instance). Note: Please read through these usage instructions at least once before invoking the transition script –how you intend to associate the AMASS physical volume groups with media will dictate how you use this script.

1. Identifying the MODE and hardware to configure

When you first invoke the transition script, you will be prompted to enter the mode that you wish to configure:

```
Please enter the MODE: OPS
```

STMGT must have already been installed into the mode you specify, or the script will fail with an error that the `ESDTMap` cannot be found.

DSS – Installation and Configuration (continued)

The transition script will then prompt you for the host name for which to configure volume groups. By default, the transition script will use the name of the host from which you are running the transition script. This is typically the correct host to use, since the transition script will be creating subdirectories in the Archive area. Use the unqualified host name, e.g. g0acg01, not g0acg01.gsfc.nasa.gov. The ESDTMap is defined in terms of unqualified host names and will produce no volume groups if you use a fully qualified host name.

```
Do you want to use to the default hardware id - e0drg01 ? Y or Ny
```

If you are configuring logical volume groups in an environment which does not pre-define the machine names on which each server should be installed (e.g., the Landover EDF environment), you should instead reply n to the request to use the default hardware ID, and specify the hardware ID of the host which you wish to emulate. For example, if you were using raven to simulate e0acg01, you would answer the next prompt as follows:

```
Please enter the hardware id. ex e0drg01: e0acg01
```

2. Tying the volume groups to the Archive Server which will manage them

Whether you use the default host name or the specified host name, you will next be prompted for root path of the archive. This directory is the location where subdirectories should be created for archival purposes. If you are using AMASS, this root path should be the path into AMASS. This path should be fully qualified, and should not include trailing slashes.

```
Please enter the rootpath for the logical archive ID's: /dss_amass/stk
```

Next, you will be prompted for the HWCI and MODE of the Archive Server for which you are configuring logical volume groups. This should match the HWCI_MODE suffix that is on the CDS entry for the desired Archive Server. Remember that you must run the transition script for each Archive Server instance you have installed.

```
Please enter the HWCI_MODE for the archive server.  
Enter NONE if no HWCI_MODE is used: DRP1_OPS
```

3. Associating volume group paths with AMASS physical volume groups

The next prompt will determine to what extent you want the transition script to automate the process. If you direct the transition script to automatically link the volume group paths to AMASS physical volume groups, you must have preconfigured a set of AMASS physical volume groups, with associated media. Otherwise, you will need to configure the AMASS physical volume groups, associate media, and link the volume group paths to the AMASS physical volume groups after the transition script has completed. Consult your AMASS administrator for instructions on how to set up physical volume groups under AMASS, and how to associate media with AMASS physical volume groups.

DSS – Installation and Configuration (continued)

i. Using pre-configured AMASS physical volume groups

If you wish to use pre-configured AMASS physical volume groups, you will need to set up several physical volume groups under AMASS, starting from a volume group number you select, and increasing sequentially. You should also associate media with each of the physical volume groups you pre-configure. You will need to respond to the transition script prompt as follows:

```
Please enter the TYPE of Storage -- AMASS or LocalDisk: AMASS
```

You will then be prompted for the starting number of the range of AMASS physical volume groups which should be used for configuration. This number corresponds to the starting number of the range of physical volume groups that you pre-configured.

```
Please enter the Volume Group number to be created: 400
```

The transition script will use this starting volume group number as the first in a sequential series of volume groups for the physical volume group associations which are created. That is, if the transition script creates four physical volume group paths, and the operator specifies a starting volume group number of 400, the physical volume group paths will be associated with AMASS physical volume groups 400, 401, 402, and 403.

ii. Configuring AMASS physical volume groups after the fact

You may also have the transition script create the physical volume group paths in AMASS without linking the paths to AMASS physical volume groups. To configure the volume groups in this manner, or to configure your archive to use non-AMASS storage, respond to the transition script prompt as follows:

```
Please enter the TYPE of Storage -- AMASS or LocalDisk: LocalDisk
```

Once the transition script has completed, you may examine the contents of the root path you specified above to see what volume group paths have been created by the transition script. You will then need to have your AMASS administrator associate those paths with AMASS physical volume groups. Note: In order for the AMASS administrator to be able to associate the paths with AMASS, you must have specified the root path as the directory through which AMASS is accessed, i.e. the AMASS root directory.

4. Accessing the database

The transition script is nearly ready to configure your logical volume groups. The final set of prompts is used to obtain the necessary information to log into the database to create the mapping from ESDT short names to volume group paths.

```
Please enter the STMGT DBO ID - ex.stmgt_role: stmgt_role  
Please enter the database password: Welcome  
Please enter the database server: e0icg01_svr  
Please enter the name of the database to be used: stmgtdb1
```

DSS – Installation and Configuration (continued)

If you are unsure as to what values should be specified for any of the above prompts, please contact your database administrator to determine what the appropriate parameters are.

5. *Last chance to cancel*

You have now entered all of the information that is needed by the transition script. You will be prompted with the parameters you entered. If you are using pre-configured AMASS volume groups, you will see a prompt much like:

```
Are the following parameters OK?
```

```
Hardware: e0drg01  
RootPath: /dss_amass/stk  
HWCI_MODE: DRP1_OPS  
Type of Storage: AMASS  
Volume Group number: 400  
DB user ID: stmgt_role  
Database password: Welcome  
Database server: e0icg01_srvr  
Database name: stmgtdbl
```

```
Enter Y or N:
```

If you intend to configure the AMASS physical volume groups after you have finished running the transition script, your prompt will look like:

```
Are the following parameters OK?
```

```
Hardware: e0drg01  
RootPath: /dss_amass/stk  
HWCI_MODE: DRP1_OPS  
Type of Storage: LocalDisk  
DB user ID: stmgt_role  
Database password: Welcome  
Database server: e0icg01_srvr  
Database name: stmgtdbl
```

```
Enter Y or N:
```

If any of the parameters are incorrect, you should enter N, or press Ctrl-C to abort the script. Once you enter Y, the transition script will begin the process of creating subdirectories and inserting the ESDT mapping into the STMGT database.

DSS – Installation and Configuration (continued)

DATA MIGRATION

If you have existing data that you wish to preserve, you will need to perform a few extra steps, both before and after running the transition script. Before running the transition script, you will need to record the existing volume group paths you have configured, as well as identifying the ESDTs that are stored in each of the existing volume groups.

Once you have run the transition script, you will need to bring up the STMGT GUI. From the Storage Config. Tab, select the ARCHIVE Server Type and click on the View Servers button. Select the Archive Server instance for which you are migrating already archived data, and click on the View Volume Group Info button.

The window that pops up will contain the complete list of ESDTs that are archived or backed up by the selected Archive Server instance. Each of these ESDT short names is a logical volume group, and is associated with the path of a physical volume group.

For each ESDT that you are migrating data, select the ESDT and click on the Modify button. Make a note of the path that is currently configured for this logical volume group. In the window that pops up, change the New Path value to refer to the old directory under which the existing data was archived. Click on the Apply button. Change the New Path value back to the directory you noted above and click on the OK button. Subsequent searches for your old data should now be able to find the data that had already been archived. Note: If the path configured for the logical volume group already matches the path under which you had archived the data, you may skip this step. Repeat this process for each ESDT that you are preserving already archived data.

INSTALLATION NOTES:

- ___ a) N/A

7.3 DSS – SCIENCE DATA SERVER (SDSRV)

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.

DSS – Installation and Configuration (continued)

- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcDsSr

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that configurable parameter SDSRV_LOCAL_STAGING_DISK is set to the value of the Staging Disk Server that is running on the same machine as the HDF EOS Servers.
- ___ d) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURATION PARAMETERS FOR THIS RELEASE:

The following parameters are automatically generated during the mkcfg process, and will not appear in the configurable parameters display:

<u>Parameter</u>	<u>Value</u>
DSSMEMORYMONITORLOWSETPOINT	75
DSSMEMORYMONITORVERYLOWSETPOINT	85
DSSMEMORYMONITORDEADBAND	5
DSSMEMORYMONITORRESRVMEMSIZE	500000000
DSSMEMORYMONITORDISABLEDFLAG	0

DSS – Installation and Configuration (continued)

Special Configuration Instructions for SDSRV

Prior to installing ESDTs into the system, the ESDT descriptor and dll files need to be copied from the staging area to the SDSRV platform. This can be accomplished by following the procedures below:

- ___ a) Configure the ESDTs and DLLs. On the Subsystem Manager window, the subsystem DSS and the component EcDsSr should be selected.
- ___ b) From the file menu select "ESDT Manager".
- ___ c) The ESDT Manager GUI is displayed.
- ___ d) The radio button "EDF" or "MINI-DAAC, VATC and All DAACS" should be enabled automatically. The "DLL Path" and "Staging Location" will be filled in automatically with the staging location that was entered during the staging install step.
- ___ e) Choose the button appropriate for your site.
- ___ f) Select the MODE by clicking on the "..." button to the right of the Mode text field. This will give a menu of modes to select. To select the mode, double-click on the selected mode. Append the specific DLL staging location name (usually "/CUSTOM/data/DSS/temp") to the "DLL Path" and "Staging Location" into their respective entry boxes.

This is the location of the descriptor and DLL files.

The instrument buttons will become enabled.

For each instrument to be configured at your DAAC:

- ___ g) Select the instrument button. Then select the descriptors DsESDT<Ii><esdt>.001.desc from the Descriptor Files column. <Ii> is the two-character instrument designator. <esdt> is the ESDT(s) to be processed.
- ___ h) After the instrument ESDT descriptor files have been selected then click the "➔" button to cause them to show up in the Selected Files column.
- ___ i) Click the "Configure" button.
All of the selected descriptor and associated DLLs will be copied to their designated directories. DLL files will be copied to the /usr/ecs/<mode>/CUSTOM/lib/ESS directory and descriptor files will be copied to the /usr/ecs/<mode>/CUSTOM/data/ESS directory

Repeat steps g-i, selecting the Sys (SYSTEM) ESDTs and select the descriptors DsESDTPp<esdt>.001.desc from the Descriptor Files column.

VERIFICATION:

- ___ a) Check that all SDSRV CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

DSS – Installation and Configuration (continued)

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all SDSRV servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Ensure that the SQL and SQS servers are running.
- ___ c) Obtain the required database parameters:

Table A - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	sdsrv_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	EcDsScienceDataServer1[_<MODE>]

Where **EcDsScienceDataServer1** is the database name in OPS mode, and **EcDsScienceDataServer1_<MODE>** is the database name in TS1 and TS2.

- ___ d) Obtain the current version of the database:
> **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
> **use EcDsScienceDataServer1[_<MODE>]**
> **go**
> **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
> **go**
... note the database version name
> **quit**
- ___ e) Using EcCoAssist on the **primary** server, execute the **DbBuild** function to create the DSS SDSRV database.
- ___ f) Select file .dbparms within the select a file box, then select **Ok** in the Database Config box.
- ___ g) Enter the required parameters in the Database Script Parameters dialogue box.
- ___ h) Select **Ok** to start the database build.

VERIFICATION:

- ___ a) Review the file EcDsSdDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- ___ b) Verify that the current database version is **"5A.03.GAMMA"**:
> **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
> **use EcDsScienceDataServer1[_<MODE>]**
> **go**
> **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
> **go**
... note the database version name

DSS – Installation and Configuration (continued)

> **quit**

- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

INSTALLING THE ATTRIBUTE VALIDS:

- ___ a) Install the Attribute Valids:
 1. The Subsystem "DSS" and component "EcDsSr (sdsrv) " should be selected on the ECS Assist Subsystem Manager display. From the file menu, select ESDT Manager.
 2. Enter the path for the Staging location into the "Staging location entry section". i.e., /net/fallen/data1/Drop4P_Stage
 3. From the file menu, select Install Valid Information. (This copies the DsDbSODictionaryData.sql and EcDsSrDbValid files to the appropriate runtime locations.)
 4. From the file menu, select Exit
 5. Click the database button.
 6. Select DbValid.
 7. Enter your site information in the Database Configurable Parameters dialogue box, and click OK.
 8. Enter your site information in the EcDsSrDbValid Script Parameters dialogue box, and click OK.

VERIFICATION OF THE ATTRIBUTE VALIDS INSTALLATION:

- ___ a) Verify that the files in step 3 were copied successfully to the /usr/ecs/<MODE>/CUSTOM/utilities directory from <stage_directory_location>/<platform>/CUSTOM/dbms/DSS and <stage_directory_location>/<platform>/CUSTOM/utilities.
- ___ b) Verify from the /usr/ecs/<MODE>/CUSTOM/logs/EcDsSrDbValid.log file that the valids installation was successful.

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the "start" function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_name> to start servers.
- ___ c) Click **start** at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the "monitor" button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIS:

- ___ a) From the command line, start the GUIs which are a part of your component on the appropriate host(s):

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
EcDsSdSrvGuiStart <MODE>
```

COMPLETE SETUP:

- ___ a) Install site-specific ESDTs necessary for checkout and operations.

DSS – Installation and Configuration (continued)

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) N/A

MAKE CONFIGURATION

- ___ a) N/A

DATABASES

- ___ a) N/A

COMPLETE SETUP

7.4 DSS – HdfEos Servers

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.

DSS – Installation and Configuration (continued)

- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcDs

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

The **DebugLevel** default value is now **0**. This means that no debug information will be written to the debug log.

The following parameters were added to the HdfEos Server Config file to provide the ability for the HdfEos Servers to automatically restart when the memory grows. In order for this to work the DAAC must be running the 5A (or later) MSS Subagents. If you are running a 4PY (or earlier) Subagent, then you must set the HDFEOS_RESTART_RELATIVE_MEMORY to 200000000. This prevents the HdfEos Servers from restarting everytime they are used. If you you are running a 5A MSS Subagent then you may use the default values. The default values are listed below.

<u>Parameter</u>	<u>Default Value</u>
DsHrRestartSignal	SIGSEV
HDFEOS_RESTART_ABSOLUTTE_MEMORY	150000000
HDFEOS_RESTART_RELATIVE_MEMORY	200000000
HDFEOF_RESTART_LOCAL_DIR	<ECS_HOME>/<MODE>/CUSTOM/bin/DSS

DSS – Installation and Configuration (continued)

DsHrRestartSignal is the signal received by the HDF EOS Server that causes the process to restart. This parameter should not be changed.

HDFEOS_RESTART_ABSOLUTTE_MEMORY sets the maximum memory that a HDF EOS Server can consume for all requests during the lifetime of the server. This parameter is configurable.

HDFEOS_RESTART_RELATIVE_MEMORY sets the maximum memory that a HDF EOS Server can consume for a single request. This parameter is configurable.

HDFEOF_RESTART_LOCAL_DIR is the directory path to the HDF EOS Server executable. This parameter is configurable; however, it should not be changed.

VERIFICATION:

- ___ a) Check that all HdfEos CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using ECS Assistant, execute the mkcdsentry function at the primary server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all HdfEos servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) SDSRV database has been built/patched

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_name> to start servers.
- ___ c) Click start at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

DSS – Installation and Configuration (continued)

START GUIs:

___ a) N/A

COMPLETE SETUP:

___ a) N/A

POST-INSTALLATION:

___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

___ a) N/A

MAKE CONFIGURATION

___ a) ECSed21434: The mkcfg function for the HdfEos servers may fail/hang, using 99%+ of CPU resources. If this happens, you must copy the file /usr/ecs/<MODE>/CUSTOM/cfg/SDSRV.ACFG from host *xxacgnn*.

DATABASES

___ a) N/A

COMPLETE SETUP

___ a) N/A

INSTALLATION NOTES:

___ a) Performance tuning for the HdfEos Servers:

1) Swap space

The HdfEos Server host (typically *xxwkgnn*) should have at least 3GB swap space. If swap space is insufficient, the acquires through the HdfEos servers tend to stop at the start of reformatting.

2) Bulk Data Service

The BDS (Bulk Data Service) options must be turned for the mounts between *xxwkgnn* and *xxdrgnn* in both directions. If this is not done, acquires will not progress beyond subsetting of the first file.

INS – Installation and Configuration (continued)

8 INS

8.1 INS - Servers

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount points diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the appropriate architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION

- ___ a) **Review any Workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ e) Identify the packages to be installed on each host (per site map).
- ___ f) Using ECS Assistant, perform a normal staged installation of the appropriate target architecture (SUN, HP, SGI) for the following component(s) on each primary and secondary host:

EcIn

VERIFICATION

- ___ a) Verify that the file <stage_directory_location>/CUSTOM/dbms/INS/EcInDbLogin has permissions set to 0755.
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

INS – Installation and Configuration (continued)

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Using EcCoAssist, execute the mkcfg function on the **primary** host using configurable parameter values from your previous installation and configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE

<u>Parameter</u>	<u>Recommended Value</u>
STMGT_RETRY_ATTEMPTS	5
STMGT_RETRY_INTERVAL	15
UR_TRANSLATION_RETRY_ATTEMPTS	12
UR_TRANSLATION_RETRY_INTERVAL	900

CONFIGURING POLLING DATA PROVIDER WITH DELIVERY RECORD

- ___ a) Select Polling Data Provider w/DR from the Configurable parameters for the polling interface pop-up menu. The Polling with DR parameters input window is displayed.
- ___ b) For each data provider that is to be configured at your site, enter parameter values as described by the **example(s)** provided in the following table:

Table C – Example Polling Data Providers with DR

Dataprovider	Polling Timer Interval	Compare File Contents Flag	Polling Directory	Hostname
EDOS	120	no	/usr/ecs/<mode>/CUSTOM/icl/xxicgnn/data/polLEDOS	xxicgnn
EDOS-ANC	120	no	/usr/ecs/<mode>/CUSTOM/icl/xxicgnn/data/polLEDOS-ANC	xxicgnn
Ias0xx	120	no	/usr/ecs/<mode>/CUSTOM/icl/xxicgnn/data/polIas0xx	xxicgnn

- ___ c) When parameters for the data provider have been entered, select add. The add dialogue pop-up will appear. Select continue to configure the data provider with the current parameter values or select cancel to terminated the add. Repeat these actions to configure other data providers by typing over the existing record before selecting add.
- ___ d) When all the required data providers have been configured, select exit from the Polling with DR parameters input pop-up. The Configurable parameters for the polling interface menu pop-up is displayed.
- ___ e) The prev and next buttons from the Polling with DR parameters input pop-up can be used to review and/or edit the data provider parameters.

INS – Installation and Configuration (continued)

CONFIGURING POLLING DATA PROVIDER WITHOUT DELIVERY RECORD

- ___ a) Select Polling Data Provider wo/DR from the Configurable parameters for the polling interface pop-up menu. The Polling without DR parameters input window is displayed
- ___ b) For each data provider that is to be configured at your site, enter parameter values as described by the **example(s)** provided in the following table:

Table D – Example Polling Data Providers without DR

Dataprovider	Polling Timer Interval	Compare File Contents Flag	Polling Directory Count
FDD	120	no	1

- ___ a) After entering a value for the Polling directory count parameter, press the return key. The Polling without DR parameters input pop-up is expanded to enter additional parameter values. The following table provides **example(s)** of the type of additional information that is required.

Table E – Example Polling Directories

Dataprovider	Polling Directory	Data Type	Host	Ingest File Type	MAX File Size
FDD	/usr/ecs/<MODE>/CUSTOM/data/INS/pollAMIATTF	AMIATTF	xxicgmn	DATA	1000000

- ___ b) When parameter values for the data provider without delivery records have been entered, select add. The add dialogue pop-up will appear. Select continue to configure the data provider with the current parameter values or select cancel to terminate the add. Repeat these actions to configure other data providers.
- ___ c) When all the required data providers without delivery records have been configured, select exit from the Polling without DR parameters dialogue pop-up to return to the Configurable parameters for the polling interface menu pop-up.

CONFIGURING GRANULE SERVERS

- ___ a) Select InGran Server Info from the Configurable parameters for the polling interface menu. The Polling Client Setup input window is displayed.
- ___ b) For each instance of a granule server to be configured, enter the granule server name (i.e. EcInGran, EcInGran0 or EcInGran1) and then select add. The record count should increment to reflect a new granule server has been configured. Repeat these actions to configure other granule servers.
- ___ c) When all required granule servers have been configured, select exit to return to the Configurable parameters for the polling interface menu.

CONFIGURATION PARAMETERS

- ___ a) Select exit from the Configurable parameters for the polling interface menu pop-up. The Configurable Parameters pop-up is displayed containing buttons for each configuration file.
- ___ b) Select a button and enter/verify configuration parameter values for that configuration file.
- ___ c) Select ok when all configuration file values have been verified/completed.

INS – Installation and Configuration (continued)

VERIFICATION

- ___ a) Check that all Ingest CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all Ingest servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Obtain the required database parameters.

Table B - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	ingest_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xx.XXXnn_srvr
Database Name	Ingest[_<MODE>]

Where **Ingest** is the database name in OPS mode, and **Ingest_<MODE>** is the database name in TS1 and TS2.

- ___ a) Obtain the current version of the database:
> **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
> **use Ingest[_<MODE>]**
> **go**
> **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
> **go**
... note the database version name
> **quit**
- ___ b) Using EcCoAssist on the primary server, execute the DbBuild function to create the INS database
- ___ c) If a “select a file” box appears, select file .dbparms within the select a file box, then select Ok in the Database Config box.
- ___ d) Enter the required parameters in the Database Script Parameters dialogue box.
- ___ e) Select Ok to start the database build.

INS – Installation and Configuration (continued)

VERIFICATION:

- ___ a) Review the file EcInDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- ___ b) Verify that the current database version is **“5A.Epsilon”**:
 - > **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
 - > **use Ingest [_<MODE>]**
 - > **go**
 - > **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag=“Y”**
 - > **go**
 - ... note the database version name
 - > **quit**
- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

SPECIAL INSTRUCTIONS FOR MODIFYING THE INGEST DATABASE

- ___ a) Start interactive sql server for Ingest database
 - >isql -S<SYBASE_SRVR> -U<dbo_username> -P<dbo_password>
 - 1> use Ingest_<MODE
 - 2> go
- ___ b) Set the EDOS IPAddress (currently 198.118.234.19) in the InEDPAddressMap table for LaRC and GFSC.
 - 1> insert InEDPAddressMap (IPAddress, ExternalDataProvider) values ('<EDOS_IPAddress>', 'EDOS')
 - 2> go
- ___ c) Set the values of the 'IngestFtpKey' parameter in the 'InDataTypeTemplate' database table to ACM1_ for the following data types: OZONEEP, MRF, MRF_H, FNMOC_ML, FNMOCMLH, NCEP03, NCEP04, SHBU_OBS, REYNSST, GDAS_0ZF, GDAS0ZFH, SEA_ICE, SEA_ICEH, OZ_DAILY, OZ_DLYH, OZ2DAILY, DAP, VegIndx3, VegIxch1, VegIxch2, VegIxch4, VegIxch5, VegIxQCD, VegIxPWI, VegIxSZA, VegIxScA, WKAERSOL, SNOWICEN, SNOWICEH, OZON_SB, ISCCPGE2, ISCCPGMS, ISCCP_GE, ISCCP_GW, ISCCP_MS, Browse, QA, PH, and all SIP data types:
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "OZ%"
 - 2> go
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "MRF%"
 - 2> go
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "FNMO%"
 - 2> go
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "NCEP%"
 - 2> go
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "GDAS%"
 - 2> go
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "SEA%"
 - 2> go
 - 1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "SNOWI%"
 - 2> go

INS – Installation and Configuration (continued)

- ```
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "VegI%"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType like "ISCCP%"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "MOD%"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "MOP%"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "CER%"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "SHBU_OBS"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "REYNSST"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "DAP"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "WKAERSOL"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "Browse"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "PH"
2> go
1> update InDataTypeTemplate set IngestFtpKey = "ACM1_" where DataType = "QA"
2> go
```
- \_\_\_ d) Set the correct value for the 'MediaStorageMgmtKey' parameter in the 'InSystemParameters' database table.
- ```
1> update InSystemParameters set MediaStorageMgmtKey = "DIP1_"
2> go
```

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the "start" function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user cmshared to start servers.
- ___ c) All servers should be started if "start" is activated at the Component level.
- ___ d) During the initial period (before HPOV is configured), use the "monitor" button of the ECS Assistant Subsystem Manager to monitor server status.
- ___ e) HP Open View starts all Ingest processes on *xxicgmn*. (HP Open View doesn't shutdown any Polling processes on either *xxicgmn* or *xxacgmn*).

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one Monitor window refresh cycle.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

INS – Installation and Configuration (continued)

COMPLETE SETUP:

- ___ a) **Review any Workarounds for the Complete Setup phase.**
- ___ b) Verify that all local and remote data provider directories for your site have been created.

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) Because additional data types have been added to the Ingest database, all of the corresponding Science Data Server UR entries can no longer be retrieved in a single Sybase query. Therefore, after executing the Mkcfg, you must edit the resulting EcInReqMgr.CFG file. Search for the entry ADVERTISING_SYBASE_LIMIT and change the value of this parameter to 200. (This parameter controls the number of Science Data Server UR entries retrieved in each query from the Advertising database; a value of zero causes the software to try to retrieve all entries in a single query.)

MAKE CONFIGURATION

- ___ a) N/A

DATABASES

- ___ a) N/A

COMPLETE SETUP

- ___ a) N/A

INSTALLATION NOTES:

- ___ a) N/A

8.1 INS – Application Server

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).

INS – Installation and Configuration (continued)

- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcIn

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ a) Review any Workarounds for the Make Configuration phase.
- ___ b) Execute the mkcfg function of EcCoAssist on each **primary** host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

<u>Parameter</u>	<u>Recommended Value</u>
STMGT_RETRY_ATTEMPTS	5
STMGT_RETRY_INTERVAL	15
UR_TRANSLATION_RETRY_ATTEMPTS	12
UR_TRANSLATION_RETRY_INTERVAL	900

INS – Installation and Configuration (continued)

CONFIGURING POLLING DATA PROVIDER WITH DELIVERY RECORD

- ___ a) Select Polling Data Provider w/DR from the Configurable parameters for the polling interface pop-up menu.
The Polling with DR parameters input window is displayed.
- ___ b) For each data provider that is to be configured at your site, enter parameter values as described by the **example(s)** provided in the following table:

Table F - Polling Data Providers with DR

Dataprovider	Polling Timer Interval	Compare File Contents Flag	Polling Directory	Hostname
GSFC-V0	120	no	/usr/ecs/<mode>/CUSTOM/icl/xxicgnn/data/pollGSFC-V0	xxicgnn
SCF	120	no	/usr/ecs/<mode>/CUSTOM/icl/xxicgnn/data/pollSCF	xxicgnn
LaRC_SAGEIII_MOC	120	no	/daac/dev/od/pdr/out	meteopl.larc.nasa.gov

- ___ c) When parameters for the data provider have been entered, select add. The add dialogue pop-up will appear. Select continue to configure the data provider with the current parameter values or select cancel to terminated the add. Repeat these actions to configure other data providers by typing over the existing record before selecting add.
- ___ d) When all the required data providers have been configured, select exit from the Polling with DR parameters input pop-up. The Configurable parameters for the polling interface menu pop-up is displayed.
- ___ e) The prev and next buttons from the Polling with DR parameters input pop-up can be used to review and/or edit the data provider parameters.

CONFIGURING POLLING DATA PROVIDER WITHOUT DELIVERY RECORD

- ___ a) Select Polling Data Provider wo/DR from the Configurable parameters for the polling interface pop-up menu.
The Polling without DR parameters input window is displayed
- ___ b) For each data provider that is to be configured at your site, enter parameter values as described by the **example(s)** provided in the following table:

Table G - Polling Data Providers without DR

Dataprovider	Polling Timer Interval	Compare File Contents Flag	Polling Directory Count
NESDIS	120	yes	17

- ___ c) After entering a value for the Polling directory count parameter, press the return key. The Polling without DR parameters input pop-up is expanded to enter additional parameter values. The following table provides **examples** of the type of additional information that is required.

Table H - Polling Directories

Dataprovider	Polling Directory	Data Type	Host	Ingest File Type	MAX File Size
NESDIS	/usr/ecs/<MODE>/CUSTOM/data/INS/pollVegIdx3	VegIdx3	xxacgnn	SCIENCE	3000000
NESDIS	/usr/ecs/<MODE>/CUSTOM/data/INS/pollVegIxch1	VegIxch1	xxacgnn	SCIENCE	3000000
NESDIS	/usr/ecs/<MODE>/CUSTOM/data/INS/pollVegIxch2	VegIxch2	xxacgnn	SCIENCE	3000000

NESDIS	/usr/ecs/<MODE>/CUSTOM/data/INS/pollISCCP_GW	ISCCP_GW	xxacgnn	SCIENCE	15000000
NESDIS	/usr/ecs/<MODE>/CUSTOM/data/INS/pollISCCPGMS	ISCCPGMS	xxacgnn	SCIENCE	10000000
NESDIS	/usr/ecs/<MODE>/CUSTOM/data/INS/pollISCCP_MS	ISCCP_MS	xxacgnn	SCIENCE	10000000

- ___ d) When parameter values for the data provider without delivery records have been entered, select add. The add dialogue pop-up will appear. Select continue to configure the data provider with the current parameter values or select cancel to terminate the add. Repeat these actions to configure other data providers.
- ___ e) When all the required data providers without delivery records have been configured, select exit form the Polling without DR parameters dialogue pop-up to return to the Configurable parameters for the polling interface menu pop-up.

CONFIGURATION PARAMETERS

- ___ a) Select exit from the Configurable parameters for the polling interface menu pop-up. The Configurable Parameters pop-up is displayed containing buttons for each configuration file.
- ___ b) Select a button and enter/verify configuration parameter values for that configuration file.
- ___ c) Select ok when all configuration file values have been verified/completed.

VERIFICATION:

- ___ a) Check that all INS CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

INS – Installation and Configuration (continued)

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all INS servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) N/A

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user cmshared to start servers.
- ___ c) Click start at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.
xxacgnn Polling server start:

1. Change Directory to the utilities directory i.e. cd /usr/ecs/<MODE>/CUSTOM/utilities

EcInPollingStart <MODE> ea_instance <Polling process name> StartTemperature <cold or warm> &

Example: EcInPollingStart <MODE> ea_instance EcInPolling.NESDIS StartTemperature cold &

Example: EcInPollingStart <MODE> ea_instance EcInPolling.GSFC-V0 StartTemperature cold &

Example: EcInPollingStart <MODE> ea_instance EcInPolling.SCF StartTemperature cold &

Example: EcInPollingStart <MODE> ea_instance EcInPolling.LaRC_SAGE_III_MOC StartTemperature cold &

VERIFICATION

MAKE CONFIGURATION

None

DATABASES

None

COMPLETE SETUP

None

INSTALLATION NOTES:

To transfer data from one mode or DAAC to another mode or DAAC, do an ftp push acquire from the source mode or DAAC. In the user profile set the email address to the Server Email Address for the site, host, and mode that is the destination. Upon completion of the ftp pull acquire, a DDIST notification message will be sent to the email address set in the user profile. The target site's EcInEmailGWServer will generate a PDR from the DDIST notification message and the target site's ingest servers will ingest the data defined in the PDR.

- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcIo

SPECIAL INSTRUCTIONS FOR INSTALLING IOS:

- ___ a) Verify that the Netscape Server has been installed and configured for this <MODE>:

```
cd /usr/ecs/OPS/COTS/ns-home/https-<SERVER_NAME>_IOS_<MODE>/config
grep ecs obj.conf
```

IOS – Installation and Configuration (continued)

- ___ b) If the *obj.conf* file contains ECS- and mode-specific information, the Netscape Server has been installed. If the *obj.conf* file has not been customized, follow the instructions “*If the Netscape Server is not installed*” in the **Complete Setup** section.

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each **primary**, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration. . Ensure that all IOS applications appear in the Configurable Parameters display:
 - EcIoAdCGIProgs
 - EcIoAdConfig
 - EcIoAdHtmlReplace
 - EcIoAdServer
 - EcIoAdSiteSpecific
- ___ a) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

N/A

VERIFICATION:

- ___ a) Check that all IOS CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all IOS servers in the directory
/usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Obtain the required database parameters:

IOS – Installation and Configuration (continued)

Table A - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	ios_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	IoAdAdvService[_<MODE>]

Where **IoAdAdvService** is the database name in OPS mode, and **IoAdAdvService_<MODE>** is the database name in TS1 and TS2.

- ___ b) Obtain the current version of the database:
- ```
> isql -S <server_name> -U <db_user_name> -P <db_user_password>
> use IoAdAdvService[_<MODE>]
> go
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"
> go
... note the database version name
> quit
```
- \_\_\_ c) Using EcCoAssist on the **primary** server, execute the **DbBuild** function to create the IOS database.
- \_\_\_ d) Select file .dbparms within the select a file box, then select **Ok** in the Database Config box.
- \_\_\_ e) Enter the required parameters in the Database Script Parameters dialogue box.
- \_\_\_ f) Select **Ok** to start the database build.

### VERIFICATION:

- \_\_\_ a) Review the file EcInDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- \_\_\_ b) Verify that the current database version is "**IOS DB Database/Drop 4PY.05**":
- ```
> isql -S <server_name> -U <db_user_name> -P <db_user_password>
> use IoAdAdvService[_<MODE>]
> go
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"
> go
... note the database version name
> quit
```
- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

COMPLETE SETUP:

For installations performed **WITHOUT** a full IOS mkcfg:

IOS – Installation and Configuration (continued)

- ___ a) Generate the configuration file used by the IOS cgi programs by selecting the EcIoAdCGIProgs option of the EcCoAssist Extensions pull-down menu; enter your site-specific values.
- ___ b) Update HTML files:
Modify the Earth Science Online Directory HTML files by selecting the EcIoAdSiteSpecific option of the EcCoAssist Extensions pull-down menu; enter your site-specific values for User Services contact information.
- ___ c) Modify Static Web Parameters:
Modify the static web parameters by selecting the EcIoAdReplaceHtml option of the EcCoAssist Extensions pull-down menu; enter your site-specific values for User Services contact information.

Verify that the User Registration URLs are correct:

```
GSFC_USERREGISTRATION =  
http://g0ins02u.ecs.nasa.gov:10600/cgi-bin/CLS/EcCIWbUr?action=request  
LARC_USERREGISTRATION =  
http://l0ins02u.ecs.nasa.gov:10600/cgi-bin/CLS/EcCIWbUr?action=request  
NSIDC_USERREGISTRATION =  
http://n0ins02u.ecs.nasa.gov:10600/cgi-bin/CLS/EcCIWbUr?action=request  
EDC_USERREGISTRATION =  
http://e0ins02u.ecs.nasa.gov:10600/cgi-bin/CLS/EcCIWbUr?action=request
```

If the Netscape Server is not installed:

- ___ a) Netscape Server Installation for IOS
NOTE: This process requires UNIX superuser privileges.

If you determined in the **Installation** section that the Netscape Server for this mode needs to be installed:

- 1) Generate a site-specific *obj.conf* file from the **EcIoAdConfig** option of the EcCoAssist **Extensions** pull-down menu.
- 2) Move the *obj.conf* file to the location needed by the Netscape Server:

```
cd /usr/ecs/<MODE>/CUSTOM/WWW/IOS/config  
cp obj.conf /usr/ecs/OPS/COTS/ns-home/https-<SERVER_NAME>_IOS_<MODE>/config/obj.conf  
where:
```

<MODE> is the current mode (OPS, TS1, or TS2)
<SERVER_NAME> is the host name of the primary IOS server

- 2) Start Netscape with the following command:
netscape http://<host-name>:<netscape-admin-port>
- 3) Netscape will display a **login** pop-up. Enter the Netscape admin user id and the admin user password, then select **ok**. A new web page is displayed.
- 4) Select Install a new Netscape Enterprise Server. A new web page is displayed.
- 5) Enter the following values in the text fields:
 - Server Port: <USER_REG_PORT>

IOS – Installation and Configuration (continued)

- Server Identifier: <host-name>_IOS_TS2
 - Document Root: /usr/ecs/<MODE>/CUSTOM/WWW/IOS
- 6) When the values have been entered, select **ok**. A Success web page should appear.
 - 7) Select Configure more about your new server and then select **Apply** (located in top right corner).

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_name> to start servers.
- ___ c) Click **start** at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

START GUIs:

- ___ a) N/A

POST-INSTALLATION:

- ___ e) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) N/A

MAKE CONFIGURATION

- ___ a) N/A

DATABASES

- ___ a) ECSed23494: Table EcDbDatabaseVersions is not created by the DbBuild. The older version table, IoAdDbVersions, is created. To check the database version, enter the following commands:

```
> isql -S <server_name> -U <db_user_name> -P <db_user_password>
> use IoAdAdvService[_<MODE>]
> go
> select IoDbVersion from IoAdDbVersions where CurrentVersion="Y"
> go
... note the database version name
> quit
```

IOS – Installation and Configuration (continued)

COMPLETE SETUP

___ a) N/A

INSTALLATION NOTES:

___ a) N/A

MSS – Installation and Configuration (continued)

10 MSS

10.1 MSS – SHARED Mode: MSS Client

None.

10.2 MSS – SHARED Mode: Mode Manager

None.

10.3 MSS – SHARED Mode: COTS Custom Components

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ i) **Review any workarounds for the Install phase.**
- ___ j) **Review any Special Instructions for the Install phase.**
- ___ k) Identify primary and secondary installation hosts (per site map).
- ___ l) Identify the software packages to be installed on this host (per site map).
- ___ m) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ n) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

For 5A Epsilon, Install in SHARED mode ONLY:

EcMsTt

MSS – Installation and Configuration (continued)

NOTE: The MSS COTS Custom component software is only installed on the mode management host.

SPECIAL INSTALLATION INSTRUCTIONS:

It may be necessary to stop HP OpenView during the installation process. If you attempt an installation, and it fails with a message such as “File table overflow”, you will need to shut down HPOV for the duration of the install, and restart it when the installation is complete. You must be the UNIX Superuser to stop HPOV:

```
su
cd /usr/OV/bin
./ovstop
exit
```

You may verify that HPOV has been stopped with the command:

```
cd /usr/OV/bin
./ovstatus
```

Superuser privileges are not required to execute *ovstatus*

VERIFICATION

- ___ o) Subsystem icon indicates a successful installation (“green light”)
- ___ p) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ q) N/A

MAKE CDS ENTRIES:

- ___ r) N/A

DATABASE:

- ___ s) N/A

START SERVERS:

- ___ t) If HP OpenView was stopped during the Installation phase, it will need to be restarted. UNIX Superuser privileges are required to start HPOV:
 su
 cd /usr/OV/bin
 ./ovstart

MSS – Installation and Configuration (continued)

You may check the status of HPOV with the *ovstatus* command:

```
cd /usr/OV/bin
./ovstatus
```

- ___ u) SHARED mode must be installed before starting any servers.
- ___ v) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_name> to start servers.
- ___ w) Click **start** at the Component level; all servers should start.
- ___ x) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ y) Verify that the server(s) stay up for at least one minute.
- ___ z) Check the server logs for any error messages indicating that the startup may have failed.

START GUIS:

From the command line, start the GUIs which are a part of your component on the appropriate host(s):

For Tivoli:

- 1) Make sure that the Tivoli user account exists
- 2) Set up the runtime environment:
source /etc/Tivoli/setup_env.csh

COMPLETE SETUP:

- ___ a) N/A

POST-INSTALLATION:

- ___ b) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ c) N/A

MAKE CONFIGURATION

- ___ d) N/A

MAKE CDS ENTRIES

- ___ e) ECSed16519: Manually create the keytab file for EcMsTtTroubleTicket

MSS – Installation and Configuration (continued)

```
dce_login <DCE_LOGIN> <DCE_PASSWORD>
rgy_edit
ktadd -p <SERVER_NAME> -pw <SERVER_PASSWORD> -f /usr/ecs/SHARED/CUSTOM/security/EcMsTtTroubleTicket.keyfile
ktlist -p <SERVER_NAME> -f /usr/ecs/SHARED/CUSTOM/security
quit
kdestroy
exit
```

where:

<DCE_LOGIN> is your DCE login account name
<DCE_PASSWORD> is your DCE account password
<SERVER_NAME> is the name of the server application, such as EcMsAgDeputy
<SERVER_PASSWORD> is the password assigned to the server principal

- ___ k) Identify primary and secondary installation hosts (per site map).
- ___ l) Identify the software packages to be installed on this host (per site map).
- ___ m) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ n) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcMsAc

EcMsDb

NOTE: The MSS Accountability software (EcMsAc) and MSS database (EcMsDb) are installed in each operating mode of the ECS (such as OPS, TS1, and TS2), not in the SHARED mode. The software is installed on the primary Accountability host.

VERIFICATION

- ___ o) Subsystem icon indicates a successful installation (“green light”)
- ___ p) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ q) **Review any Workarounds for the Make Configuration phase.**
- ___ r) For EcMsAc only, execute the mkcfg function of EcCoAssist on each **primary** host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ s) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

N/A

VERIFICATION:

- ___ t) Check that all MSS CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ u) Verify that mode-specific parameters contain the correct mode identifier

MSS – Installation and Configuration (continued)

MAKE CDS ENTRIES:

- ___ v) Using EcCoAssist, execute the mkcdsentry function on the **primary** server.
- ___ w)

VERIFICATION:

- ___ x) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ y) Verify that keytab files were created for all MSS servers in the directory /usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ z) **Review any Workarounds for the Database phase.**
- ___ aa) Obtain the required database parameters:

Table A - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	mss_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	mss_acct_db[_<MODE>]

Where **mss_acct_db** is the database name in OPS mode, and **mss_acct_db_<MODE>** is the database name in TS1 and TS2.

- ___ b) Obtain the current version of the database:
> **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
> **use mss_acct_db[_<MODE>]**
> **go**
> **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
> **go**
... note the database version name
> **quit**
- ___ c) Using EcCoAssist on the **primary** server, execute the **DbBuild** function for the EcMsDb component to create the MSS database.
- ___ d) Select file .dbparms within the select a file box, then select **Ok** in the Database Config box.
- ___ e) Enter the required parameters in the Database Script Parameters dialogue box.
- ___ f) Select **Ok** to start the database build.

VERIFICATION:

- ___ g) Review the file EcMsDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.

MSS – Installation and Configuration (continued)

- ___ h) Verify that the current database version is “**Drop 5A**”:
- ```
> isql -S <server_name> -U <db_user_name> -P <db_user_password>
> use mss_acct_db[_<MODE>]
> go
> select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"
> go
... note the database version name
> quit
```
- \_\_\_ i) Have the DBA verify the database changes through the DbDesc script for this subsystem.

### START SERVERS:

- \_\_\_ j) SHARED mode must be installed before starting any servers.
- \_\_\_ k) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server\_name> to start servers.
- \_\_\_ l) Click start at the Component level; all servers should start.
- \_\_\_ m) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

### VERIFICATION

- \_\_\_ n) Verify that the server(s) stay up for at least one minute.
- \_\_\_ o) Check the server logs for any error messages indicating that the startup may have failed.

### START GUIS:

- \_\_\_ p) From the command line, start the GUIs which are a part of your component on the appropriate host(s):
- ```
cd/usr/ecs/<MODE>/CUSTOM/utilities
EcMsAcRegUserGUIstart <MODE>
EcMsAcOrderGUIstart <MODE>
```

PLS – Installation and Configuration

11 PLS

11.1 PLS – Servers and GUIs

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcPI

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

PLS – Installation and Configuration (continued)

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each **primary** host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

Two new parameters have been added:

<u>Parameter</u>	<u>Recommended Value</u>
AcceptableCertainty	0.2
MaxSlippagePerc	0.5

VERIFICATION:

- ___ a) Check that all PLS CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) Using EcCoAssist, execute the mkcdsentry function only on the **primary** server.
- ___ b) If necessary, set the group membership on the keytab files to <server_group>.

VERIFICATION:

- ___ a) Review the Results window of the ECS Assistant for any warning or error messages.
- ___ b) Verify that keytab files were created for all PLS servers in the directory
/usr/ecs/<MODE>/CUSTOM/security.

DATABASE:

- ___ a) **Review any Workarounds for the Database phase.**
- ___ b) Obtain the required database parameters.

Table B - Database Parameters

PARAMETER	VALUE
DBO ID, db_user_name	pdps_role
Password, db_user_password	<DBO password>
SQL Server Name, server_name	xxXXXnn_srvr
Database Name	pdps[_<MODE>]

PLS – Installation and Configuration (continued)

Where **pdps** is the database name in OPS mode, and **pdps_<MODE>** is the database name in TS1 and TS2.

- ___ b) Obtain the current version of the database:
> **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
> **use pdps[_<MODE>]**
> **go**
> **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
> **go**
... note the database version name
> **quit**
- ___ d) Using EcCoAssist on the **planning workstation** (not the planning server), execute the **DbBuild** function to create the PLS PDPS database.
- ___ e) If a “select a file” box appears, select file .dbparms, then select **Ok** in the Database Config box.
- ___ f) Enter the required parameters in the Database Script Parameters dialogue box.
- ___ g) Select **Ok** to start the database build.

VERIFICATION:

- ___ a) Review the file EcPIDbBuild.log in /usr/ecs/<MODE>/CUSTOM/logs for any error or warning messages.
- ___ b) Verify that the current database version is “**5A.03 (gamma)**”:
> **isql -S <server_name> -U <db_user_name> -P <db_user_password>**
> **use pdps[_<MODE>]**
> **go**
> **select EcDbDropVersion from EcDbDatabaseVersions where EcDbCurrentVersionFlag="Y"**
> **go**
... note the database version name
> **quit**
- ___ c) Have the DBA verify the database changes through the DbDesc script for this subsystem.

START SERVERS:

- ___ a) SHARED mode must be installed before starting any servers.
- ___ b) For the initial startup, use the “start” function of the ECS Assistant Subsystem Manager to start your servers. EcCoAssist should be running as user <server_name> to start servers.
- ___ c) Click **start** at the Component level; all servers should start.
- ___ d) During the initial period (before HPOV is configured), use the “monitor” button of the ECS Assistant Subsystem Manager to monitor server status.

VERIFICATION

- ___ a) Verify that the server(s) stay up for at least one minute.
- ___ b) Check the server logs for any error messages indicating that the startup may have failed.

PLS – Installation and Configuration (continued)

START GUIs:

- ___ a) From the command line, start the GUIs which are a part of your component on the appropriate host(s).

To start the Resource Manager GUIs:

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
EcPIRpAllStart <MODE> <MSGSRV_ID>
EcPIRpReStart <MODE> <MSGSRV_ID>
EcPIRpSiStart <MODE> <MSGSRV_ID>
```

To kill the resource planning background processes after exiting the GUIs:

```
EcPIRpSlayAll <MODE> <MSGSRV_ID>
```

To start the Planning GUIs:

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
dce_login <dce_user_name> <dce_password>
EcPIPRE_IFStart <MODE>
kdestroy
exit
```

```
EcPISomeStart <MODE> <MSGSRV_ID>
EcPIProdStratStart <MODE> <MSGSRV_ID>
EcPITISStart <MODE> <MSGSRV_ID>
EcPIWbStart <MODE> <MSGSRV_ID>
```

To kill the planning background processes after exiting the GUIs:

```
EcPISlayAll <MODE> <MSGSRV_ID>
```

COMPLETE SETUP:

- ___ a)
___ b)

Review any Workarounds for the Complete Setup phase.

If the PDPS database has been rebuilt, enter the appropriate hardware resources for this mode.

POST-INSTALLATION:

- ___ a)

Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) N/A

PLS – Installation and Configuration (continued)

MAKE CONFIGURATION

___ a) N/A

DATABASES

___ a) N/A

COMPLETE SETUP

___ a) N/A

INSTALLATION NOTES:

___ a) The following .CFG files need manual changes if you need to set **DBModeOverride** to a database name other than the mode name:

EcPIRm.CFG

EcPIWb.CFG

EcPIPReDitor.CFG

EcPITL.CFG

TOOLKIT – Installation and Configuration

12 TOOLKIT

12.1 TOOLKIT – SGI

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as TOOLKIT):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map).
- ___ e) The TOOLKIT **must** be a clean install every time. If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host. If the mode is **not** being cleaned out at this delivery, you must manually delete all TOOLKIT components prior to starting the install (refer to the *Removing TOOLKIT Components* section of the **Installation Notes**).

NOTE: If the version of AAdata has not changed at this release, you may save time performing the SGI installation if you do NOT delete the AAdata directory, and set InstallAAdata to False in the mkcfg phase

- ___ f) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (TOOLKIT) for the following component(s) on each primary and secondary host:

EcTk
- ___ g) Select package EcTkToolkit.pkg

TOOLKIT – Installation and Configuration (continued)

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each **primary** host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.

Reminder: Parameter **SunOnlyTarFile** must be set to **False**.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

N/A

VERIFICATION:

- ___ a) Check that all TOOLKIT CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) N/A

DATABASE:

- ___ a) N/A

START SERVERS:

- ___ a) N/A

START GUIs:

- ___ a) N/A

COMPLETE SETUP:

- ___ a) Update the utcpole.dat and leapsec.dat files (see the *Updating the utcpole.dat And leapsec.dat Files* section of the Installation Notes for a description of the update process).

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

TOOLKIT – Installation and Configuration (continued)

WORKAROUNDS:

INSTALLATION

___ a) N/A

MAKE CONFIGURATION

___ a) N/A

DATABASES

___ a) N/A

COMPLETE SETUP

___ a) N/A

INSTALLATION NOTES:

1. Support for **UseOldInstallMethod=TRUE** will be removed in a future release.

2. Removing TOOLKIT Components:

To remove all TOOLKIT components and ensure a clean installation, enter the following commands:

```
cd /usr/ecs/<MODE>/CUSTOM
rm -rf TOOLKIT HDF HDFEOS toolkit daac_toolkit_f77
... optionally also remove the AAdat directory
cd utilities
rm EcTk*Mkcfg
```

For sites using **UseOldInstallMethod=TRUE**, you must also remove any remaining DAAC and SCF toolkit links.

3. Updating the utcpole.dat And leapsec.dat Files:

The Toolkit support files utcpole.dat and leapsec.dat need to be updated regularly, using the scripts provided with the Toolkit delivery. The first update should be performed at installation time. It is up to the site to put a regular update process (such as through a UNIX *cron* job) in place.

The examples in this section assume that the “new” Toolkit install method was used at configuration time. If you used the “old” install method, the top-level Toolkit directory name should be changed accordingly. (For example, *TOOLKIT/toolkit/bin/sgi* would be *daac_toolkit_f77/TOOLKIT/bin/sgi*.)

The utcpole.dat and leapsec.dat files reside in a data area common to all installed Toolkits. The update scripts only need to be run once on each Toolkit host, and they may be run from the *bin/<architecture>* directory of any installed Toolkit.

The delivered update scripts will only run on a science processor with a dual interface (a “u” interface).

TOOLKIT – Installation and Configuration (continued)

The user account performing the update must have write permission in the Toolkit directories

On a dual interface science processor host:

```
cd /usr/ecs/<MODE>/CUSTOM/TOOLKIT/toolkit/bin/sgi
source pgs-env.csh
update_leapsec.sh
... the following messages will be issued at successful completion:
    Status of PGS_TD_NewLeap call was (0)
    Status of MOVE command was (0)
update_utcpole.sh
... the following messages will be issued at successful completion:
    Status of PGS_CSC_UT1_Update was (0)
    Status of MOVE command was (0)
```

If you have additional science processors without a dual interface, you must ftp the updated files from the first science processor to the others manually. From the dual interface host:

```
cd /usr/ecs/<MODE>/CUSTOM/TOOLKIT/toolkit/database/common
ftp xxspgmn
...enter build account user name (or another account with write access to the TD and CSC directories)
...enter user password
>cd /usr/ecs/<MODE>/CUSTOM/TOOLKIT/toolkit/database/common
>put TD/leapsec.dat
>put CSC/utcpole.dat
>quit
```

V0C – Installation and Configuration

13 V0 Client

13.1 V0C – Servers and GUIs

These procedures are order-dependent. Each individual step should be completed before the follow-on step is attempted for Install, Make Configuration, Make CDS Entries, Databases, and Complete Setup.

Replace all occurrences of the string <MODE> with the mode into which you are performing the installation i.e. TS1, TS2 or OPS. Replace all occurrences of <stage_directory_location> with the path name of the staging directory provided to you by the installation lead.

PREREQUISITES:

- ___ a) Read and familiarize yourself with the document “How To Use The ECS Assistant.”
- ___ b) Review the instructions for your type of installation (usually a normal staged installation).
- ___ c) Review build plan for new capabilities and procedures.
- ___ d) Review site map file for additions/deletions/changes to the installed configuration.
- ___ e) Review HW/SW mapping for additions/deletions/changes to the installed configuration.
- ___ f) Review mount point diagram and verify mount points (if applicable to your subsystem).
- ___ g) Obtain the site-specific user account names, passwords, and groups required to perform the installation and checkout. This will include any or all of the <build_account>, <dce_login>, <dce_admin>, and <server_manager> accounts, the <server_group>, and the <db_password>.
- ___ h) Obtain the staging area directory path name from the installation lead. This should include the architecture-specific path component (such as SUN, SGI, or HP):
<stage_directory_location> = _____

INSTALL:

INSTALLATION:

- ___ a) **Review any workarounds for the Install phase.**
- ___ b) **Review any Special Instructions for the Install phase.**
- ___ c) Identify primary and secondary installation hosts (per site map).
- ___ d) Identify the software packages to be installed on this host (per site map)
- ___ e) If desired, save the current .cfgparms file.
- ___ f) If this is a full system delivery, verify that the Installation Lead has cleaned out the mode on this host.
- ___ g) Using EcCoAssist, perform a normal staged installation for the appropriate target architecture (Sun, HP, SGI) for the following component(s) on each primary and secondary host:

EcVc

VERIFICATION

- ___ a) Subsystem icon indicates a successful installation (“green light”)
- ___ b) Review the Results window of the ECS Assistant Subsystem Manager for any warning or error messages.

V0C – Installation and Configuration (continued)

MAKE CONFIGURATION:

- ___ a) **Review any Workarounds for the Make Configuration phase.**
- ___ b) Execute the mkcfg function of EcCoAssist on each primary host, using either the Configurable Parameters table provided with the Release documentation (if available), or the configurable parameter values from your previous installation configuration.
- ___ c) Verify that the xxx.CFG, xxx.ACFG, and xxx.PCFG files have a group membership of <server_group>.

NEW OR CHANGED CONFIGURABLE PARAMETERS FOR THIS RELEASE:

N/A

SPECIAL INSTRUCTIONS FOR V0C CONFIGURATION:

For initial installations, the B0 Search & Order Tool should be run in TEST data mode. The following values are suggested for the configuration parameters:

B0sotDebugLogEnable	=	TRUE
B0sotEndUser	=	FALSE
B0sotDataMode	=	TEST
B0sotMergeEnable	=	TRUE
TestDaacId	=	<your data center name>
TestDaacInternet	=	<your V0C server host>
TestDaacPort	=	<mode-dependent port number>

The values for TestDaacId, TestDaacInternet, and TestDaacPort should be defined in the configurable parameters table for your site for the V0 Client subsystem.

Refer to the section “**Configuration Notes**” for additional information on configuring your system for PREOPS and OPS data modes.

VERIFICATION:

- ___ a) Check that all V0C CFG, ACFG, and PCFG files were updated during the mkcfg process
- ___ b) Verify that mode-specific parameters contain the correct mode identifier

MAKE CDS ENTRIES:

- ___ a) N/A

DATABASE:

- ___ a) N/A

START SERVERS:

- ___ a) N/A

V0C – Installation and Configuration (continued)

START GUIs:

- ___ a) From the command line, start the GUIs which are a part of your component on the appropriate host(s):

```
cd usr/ecs/<MODE>/CUSTOM/bin/V0_Client
run_bosot.sh <ECS_HOME> <MODE>
... double-click on the B0SOT icon to launch the GUI
```

COMPLETE SETUP:

- ___ a) At some point, each mode will need to be configured for the appropriate B0SOT data mode (OPS, PREOPS, or TEST) to reflect its operational data mode. Refer to the “**Configuration Notes**” section for additional information on each data mode.

POST-INSTALLATION:

- ___ a) Compare the installed configuration with the site-specific HW/SW baseline to verify the installation.

WORKAROUNDS:

INSTALLATION

- ___ a) N/A

MAKE CONFIGURATION

- ___ a) N/A

DATABASES

- ___ a) N/A

COMPLETE SETUP

- ___ a) N/A

INSTALLATION NOTES:

- ___ a) N/A

CONFIGURATION NOTES:

Parameter settings are different for real-world operations and test/training. A detailed explanation of these differences follows.

- 1) The B0sotDataMode parameter needs to be set to the correct value depending on the manner in which the B0SOT is expecting to be utilized. The B0SOT uses data files that are generated by V0 personnel from valids files that are received periodically from each DAAC. This enables the B0SOT client to access newly available data holdings at each archive. When the B0SOT is invoked, it

V0C – Installation and Configuration (continued)

contacts a V0 server to determine if updated files are available. If new files are available, they are downloaded and configured prior to running the B0SOT executable. There is an OPS server and a PREOPS server. The OPS server provides access to fully validated and approved files for end-user usage. The PREOPS server provides DAAC personnel access to their new valids for validation purposes prior to making them available to the end-user population.

For DAAC development testing, a test set of files is included in the directory CUSTOM/data/V0_Client/sup_files. When installing, the installer needs to select which value (OPS, PREOPS, TEST) to use as the B0sotDataMode. The selected value is stored in the CUSTOM/cfg/EcVcB0sot.cfg file in the environment variable B0SOT_DATA_MODE.

After installation, the data mode selected at install time can be overridden by changing the value of the B0SOT_DATA_MODE variable in the CUSTOM/cfg/EcVcB0sot.cfg file; by setting the environment variable B0SOT_DATA_MODE to the desired value prior to running the B0SOT startup script; by adding the data mode value as the third argument to the run_bosot.sh script or as the second argument to the EcVcB0sotStart script; by copying the EcVcB0sot.cfg file to \$HOME/b0sot/EcVcB0sot.cfg and then modifying the B0SOT_DATA_MODE variable.

- 2) The B0sotAutoxferEnable parameter is used to indicate whether the V0 support file servers should be contacted for the latest OPS or PREOPS data files when the B0SOT client is run. This value must be set to TRUE to obtain either the OPS or PREOPS files or the B0SOT client will not be able to run properly.

When using the TEST data mode, the automatic transfer capability is disabled by the startup script in order to preserve the test files. When installing, the installer should select FALSE only if they are using a stable set of support files that they do not want updated.

After installation, the automatic transfer capability can be modified by changing the value of the environment variable B0SOT_USE_AUTOXFER in the CUSTOM/cfg/EcVcB0sot.cfg file or by copying the EcVcB0sot.cfg file to \$HOME/b0sot/EcVcB0sot.cfg and modifying the B0SOT_USE_AUTOXFER variable.

- 3) The B0sotMergeEnable parameter is used at install time to generate a test data center entry that will get merged into the standard archive.odl file that is part of the B0SOT data files. The archive.odl file contains a list of the available data centers with their corresponding internet address and port number. If valids for a specific data center have been processed by the V0 personnel and a corresponding entry exists in the archive.odl file, then the valids for that data center will be visible from the B0SOT Search Screen.

However, if valids for a specific DAAC have been processed by the V0 personnel and no corresponding entry exists in the archive.odl file, then none of the valids for that data center will be visible. This last method is how the ECS valids will be handled to support testing. The ECS valids will be incorporated into the normal V0 valids processing, but no entries will be added to the archive.odl file so their valids won't be seen by regular users. By setting the B0sotMergeEnable to TRUE, the TestDaacId, TestDaacInternet, TestDaacPort, and TestDaacGuideSvr parameters are used to generate the EcVcMergeArchive.odl file in the CUSTOM/data/V0_Client directory. The TestDAACId, TestDAACInternet, and TestDaacPort values must correspond to the relevant values used when configuring the V0 Gateway during installation. This EcVcMergeArchive.odl file contains a single

V0C – Installation and Configuration (continued)

DATA_CENTER odl group entry that is merged with the archive.odl file in the appropriate data mode to create a new archive.odl file that will contain the test data center and make the corresponding valids visible from the B0SOT Search Screen.

If the installer is using the TEST data mode, then they should check the existing archive.odl file in the CUSTOM/data/V0_client/sup_files directory to see if it already contains a test entry for ECS-EDC or ECS-TEST with an INTERNET address of dms1.hitc.com and a PORT of 6001. If this exists, then the installer should change the INTERNET and PORT parameters to the correct values in the existing archive.odl file, and set the B0sotMergeEnable parameter to FALSE.

This capability should not be utilized when installing the B0SOT for operational use.

If more than one DAAC needs to be added, manually edit the EdVcMergeArchive.odl file after the Mkcfcg process has been run and add another dataset group with the correct values. After installation, the merge capability can be disabled by changing the value of the environment variable B0SOT_MERGE_ENABLE in the CUSTOM/cfg/EcVcb0sot.cfg file; by copying the EcVcb0sot.cfg file to \$HOME/b0sot/EcVcb0sot.cfg and modifying the B0SOT_MERGE_ENABLE variable; or by deleting the EcVcMergeArchive.odl file from the CUSTOM/data/V0_Client directory.

Appendix C. Test Verification

The following SVAT NCR matrix is the final Test report for Release 5A.

Table C-1. Test Report

NCR	Subsystem	S	D	Status	Site	NCR Title
16863	SDSRV	2	V	Verified	VATC	No Notification if Subsetting/Reformatting Fails
17470	MSS	2	V	Verified	EDC	HPOV inconsistent in bringing up/down servers via Mode
17780	MSS	2	T	Verify at site	EDC	ECS assist make configuration files
19034	MSS	2	V	Verified	NSIDC	HP OPENVIEW : Problem with Server Icon State
19035	MSS	2	V	Verified	NSIDC	HP Openview : Server Status is not reliable
19549	INGEST	2	C	Closed	Mini-DAAC	GUI needs to update Request State when a Media Ingest request fails
19705	MSS	2	T	Verify at site	EDC	EcAgManager generates debug messages that are not controlled by PF_* mac
20096	DMS	2	C	Verified	EDC	VOSOT : Two Datatype Search with Time Limit Failed
20355	STMGT	2	C	Closed	GSFC	Anonymous FTP or not anonymous FTP?
20363	DMS	2	C	Closed	EDC	Failed message returned to V0 Client after order submitted
20388	PLS	1	C	Closed	VATC	SubServer : Looses notifications and communication if Sub Mgr down
20408	MSS	2	V	Verified	GSFC	EcMsAcOrderGUI : mss_acct_db recieves a large size of numBytes from DDIST
20515	INGEST	2	V	Verified	LaRC	SAGE3 MOC support required for LDAAC testing
20530	DPS	2	C	Closed	EDC	DPS : PRONMG deadlock in staging
20643	DPS	1	C	Closed	VATC	Destaging can fail but job completes w/ success in Autosys
20690	DDIST	2	V	EDC	Verified	Out of swap space on e0dis02 due to DDIST GUI
20691	CSS	2	C	Closed	EDC	SBSRV GUI require DCE login prior to activating GUI.
20732	STMGT	2	C	VATC	Closed	Staging disk appears full to IngestFTP but is not
20735	DMS	1	V	EDC	Verified	V0ToEcsGateway core dumps during submitting orders
20742	SDSRV	2	C	VATC	Closed	Hdf Server Hangs When SDSRV Terminates
20751	DPS	1	C	Mini-DAAC	Closed	SSIT : Multiple Output Logical IDs can't use same MCF
20752	DPS	2	V	LaRC	Verified	EcDpAtCheckPCF Cannot Find File pctcheck
20786	INGEST	2	V	VATC	Verified	Can't update InExternalDataProviderInfo db table using Ingest GUI

Table C-1. Test Report

NCR	Subsystem	S	D	Status	Site	NCR Title
20787	INGEST	2	V	VATC	Verified	MOD000 and MOD000X not found in Ingest database tables
20789	MSS	2	V	VATC	Verified	The EclnAppStart Script will not the start the EclnServers
20804	STMGT	2	T	GSFC		Archive Server thinks files are incomplete if no Offsite ID is specified
20822	STMGT	2	T	GSFC	Verify at Site	Problems doing an FtpPush
20831	ESDT	2	C	Closed	EDC	FtpDis Server can ftp only one scene at a time

20835	IDG	1	V	EDC	Verified	EcDsStArchiveServer not killing child EcUtCopyExec processes
20836	STMGT	2	V	EDC	Verified	Error creating directory in PullMonitor
20882	MSS	2	C	Mini-DAAC	Closed	Bug in EcDpAtMgrStart
20893	SDSRV	1	C	EDC	Closed	SDSRV to HDFServer queue handling
20894	INGEST	1	C	EDC	Closed	Ingest/SDSRV mcf thread seems to hang
20895	STMGT	1	C	EDC	Closed	staging disk allocation miscalculated
20909	SDSRV	2	C	EDC	Closed	MOC script failed to Ftp results to MOC
20914	DMS	2	C	EDC	Closed	Field length too long for V0ToEcs Gateway to handle
20922	CSS	2	C	Closed	GSFC	SBSRV Lost Notifications
21142	DPS	2	V	LaRC	Verified	Job Managment Startup Fails- Error In Consistency Check
21153	PLS	1	T	Mini-DAAC	SCI-Off to Verify	GranuleMatching fails for L0 files < 1 orbit duration
21253	STMGT	2	C	LaRC	Closed	EcDsStConfigVolGrps doesn't properly set up backup volume groups
21266	SDSRV	2	C	EDC	Closed	Science data server core dumped during Staging Disk WARM restart
21272	MSS	2	C	NSIDC	Closed	Install - 4PY - NSIDC can not install HDFEOS Server - no m0wkg01 server
21340	INGEST	1	C	VATC	Closed	Ingest of AST_L1B data fails during Preprocessing
21341	IDG	2	C	VATC	Closed	SBSRV : Not handling date qualifiers correctly
21357	INGEST	2	C	GSFC	Closed	Ingest is duplicating AP_ID's
21387	ESDT	1	C	EDC	Closed	Ordered Landsat 7 scene has inconsistent MTP
21424	MSS	2	C	NSIDC	Closed	Missing Files in 4PY Install of IOS
21474	INGEST	2	V	GSFC	Verified	Incorrect ExpeditedDataType in InDataTypeTemplate where DataType=AST_EXP
21510	PLS	2	C	VATC	Closed	Production Requests Not Deleted
21517	DDIST	2	C	VATC	Closed	Can't Bring Up DDIST GUI for Y2K Testing
21613	INGEST	1	C	GSFC	Closed	GSFC/SMC EclnCopyAM1ANC script fails
21636	INGEST	2	V	VATC	Verified	SCF record in the InExternalDataProviderInfo table has wrong IngestType

Table C-1. Test Report

NCR	Subsystem	S	D	Status	Site	NCR Title
21670	DPS	2	C	Closed	VATC	Disk Allocation entries not cleaned up for multi-file granules
21690	INGEST	2	C	VATC	Closed	Error in DataProvMediaStorageMgmtKey parameter value
21698	INGEST	2	V	Verified	VATC	local/remote dir. structure missing for DDIST, DEM_WS, SAGE_SCF
21731	MSS	2	C	VATC	Closed	Can't start Polling processes on t1acg01
21740	STMGT	2	V	Verified	VATC	FTP Push failed for AST_08 during Y2K testing (NON-Y2K NCR)
21740	STMGT	2	V	VATC	Verified	FTP Push failed for AST_08 during Y2K testing (NON-Y2K NCR)
21765	STMGT	2	C	Closed	EDC	FTP library does not return failure on write error
21765	STMGT	2	V	EDC	Verified	FTP library does not return failure on write error
21772	SDSRV	2	C	EDC	Closed	LST3b.2 OPS MODE StagingDiskServer core dumped on
21781	MSS	2	T	Verify at site	LaRC	HPOV Server Shutdown/Startup Problems
21834	SDSRV	2	V	LaRC	Verified	MISR PGE Staging : Random ESDT Acquire Failure
21836	STMGT	2	C	Mini-DAAC	Closed	EclnGUI core dump when ingest using D3
21851	DPS	2	C	Closed	LaRC	EcDpPrDM : Does not retry after failure to update completion state
21878	INGEST	1	C	Mini-DAAC	Closed	Preprocessing error received for good NCEP04 data
21918	INGEST	2	T	Verify at Site	LaRC	Deadlock in database caused Polling Request failed
21941	DPS	2	C	Closed	VATC	DM : Deadlock on insert - Insert job failed for MODPGE08
21952	SDSRV	2	T	Note # 1	VATC	Y2K : L7 MOC Script Calls 123000 and 123100 Day 366
21963	PLS	1	C	Closed	LaRC	Deadlock - Reduce duration of DPR create transaction
21999	INGEST	2	C	Closed	VATC	Y2K : FDD attitude data cannot handle day 366 in the filename
22082	SDSRV	2	T	Verify at Site	LaRC	SDSRV has memory leak
22180	SDSRV	2	C	Mini-DAAC	Closed	Full Install of 4PY reveals incorrect attribute values in SDSRV tables
22183	PLS	2	V	LaRC	Verified	SubMgr : receiver queue uuid should be fixed at all times.
22198	INGEST	2	V	VATC	Verified	Staging problem in Ingest for converted datatypes.
22312	ESDT	2	C	Verified	EDC	LST2b.2 (OPS) LPDS/LPGS : MTP format 1 vs. format
22341	INGEST	2	V	Verified	VATC	Error in InSourceMCF table for WKAERSOL (STARTYEAR and ENDYEAR)
22501	DMS	2	C	Closed	EDC	Shipping Address
22511	SDSRV	2	V	Verified	GSFC	GSFC/SMC File name and the corresponding metadata
22555	CSS	2	V	Verified	LaRC	SDSRV has memory leak
22604	DPS	2	C	Closed	GSFC	GSFC/SMC AM-1 DPREP core dumps due to exceeding array bounds.
22610	INGEST	2	V	Verified	EDC	4PX26 : Ingest Request does not fail when machine is unknown.
22629	ESDT	1	V	Verified	EDC	OPS : Scenes from subinterval over pole

Table C-1. Test Report

NCR	Subsystem	S	D	Status	Site	NCR Title
22686	DPS	1	C	Closed	LaRC	Can't run DPREP
22687	SDSRV	2	C	Closed	EDC	4PX26 OPS : MOC script using inappropriate
22755	CSS	1	C	Closed	VATC	ESDT failure for AP and QA ESDTs in the VATC TS1
22767	SDSRV	1	C	Closed	Mini-DAAC	Metadata validation fails when inserting granule
22782	SDSRV	1	C	Closed	VATC	SDSRV DB Missing correct ProcGetFileStorage
22791	CSS	1	V	Verified	VATC	Static message In EcMpMsgPngCtrl Constructor
22836	STMGT	1	C	Closed	LaRC	Shared data in DB Connection Manager not protected properly
22881	INGEST	2	V	Verified	GDAAC	GSFC-Cannot poll FDD with interface
22883	INGEST	1	C	Closed	VATC	EMOS polling does not work in the VATC
22901	INGEST	2	V	Verified	EDC	TS2 : 4PY.05 : e0icg01 : InReqMgr cored after startup
23006	INGEST	2	V	Verified	VATC	Preprocessing error for data type g3aeph
23066	STMGT	2	R	Verify at Site	LaRC	Memory leak associated with DsStParameterList
23069	DDIST	2	V	Verified	EDC	4PY : ECS Notification email sent to CUSTOMERS needs instructions
23124	INGEST	1	V	Verified	VATC	Can not verify time range of Definitive Orbit Data matches the time rang
23197	INGEST	2	V	Verified	LaRC	SAGE III PDR Filenames not transferred to subscription filename.
23209	ESDT	2	V	Verified	LaRC	SAGE III PDR Filenames not transferred to subscription Filenames.
23235	SDSRV	2	V	Verified	VATC	sdrv search performance
23239	MSS	2	V	Closed	VATC	Order Tracking Server does not return correct status
23249	INGEST	2	V	Closed	VATC	MODAPS and MOPITT data providers need to be added to EclnMkData

Note #1 Awaiting next series of Y2K tests in VATC

Abbreviations and Acronyms

AA	Ancillary Data Access ASTER
API	Application Program Interface
ASTER	Advanced Spaceborne Thermal Emission and Reflection Radiometer
B0SOT	B0 Search & Order Tool
CCB	Change Control Board
CCR	Configuration Change Request
CDMTS	Configuration/Data Management Tracking System
CDRD	Contract Data Requirements Document
CDRL	Contract Data Requirements List
CI	Configuration Item
CIL	Configuration Item List
CLS	Client Subsystem
CM	Configuration Management
CMO	Configuration Management Organization
CMP	Configuration Management Plan
CO	Contracting Officer
COTR	Contracting Officer's Technical Representative
COTS	Commercial Off The Shelf
CSA	Configuration Status Accounting
CSCI	Computer Software Configuration Item
CSR	Consent to Ship Review
CSS	Communications Subsystem
DAAC	Distributed Active Archive Center
DAR	Data Acquisition Request
DB	Database
DCE	Distributed Computing Environment
DCN	Document Change Notice

DDIST	Data Distribution
DDTS	Distributed Defect Tracking Software
DID	Data Item Description
DM	Data Management
DMO	Data Management Organization
DMS	Data Management Subsystem
DOD	Department of Defense
DPS	Data Processing Subsystem
DSS	Data Server Subsystem
ECMP	ECS Configuration Management Plan
ECS	EOSDIS Core System
EDC	EROS Data Center
EDF	ECS Development Facility
EDHS	ECS Data Handling System
EDOS	EOS Data and Operations System
EOS	Earth Observing System
EOSDIS	Earth Observing System Data and Information System
EROS	Earth Resources Observation System
ESDIS	Earth Science Data and Information System
ESDT	Earth Science Data Types
FOS	Flight Operations Segment
FTP	File Transfer Protocol
GFE	Government Furnished Equipment
GSFC	Goddard Space Flight Center
HCE	Hardware Configuration Engineer
HDF	Hierarchical Data Format
HPOV	HP Open View
http	Hypertext Transport Protocol
I&T	Integration and Testing

I/O	Input/Output
IAS	Image Assessment System
IATO	Independent Acceptance Test Organization
IDG	Infrastructure Data Group
IEEE	Institute of Electrical and Electronic Engineers
IMS	Information Management System (ECS)
INGST	Ingest CSCI
INS	Ingest Subsystem
IOS	Interoperability Subsystem
ISS	Internetworking Subsystem
JPL	Jet Propulsion Laboratory
LaRC	Langley Research Center
Landsat	Land Remote-Sensing Satellite
M&O	Maintenance and Operations
MET	Metadata
MODIS	Moderate-Resolution Imaging Spectroradiometer
MSS	Management Support Subsystem
N/A	Not Applicable
NASA	National Aeronautical and Space Administration
NCSA	National Center for Supercomputer Applications
NCR	Nonconformance Report
NRCA	Nonconformance Reporting and Corrective Action
NSIDC	National Snow and Ice Data Center (DAAC)
PGE	Product Generation Executive (formerly Product Generation Executable)
PCF	Process Control File
PDS	Production Data Set
PDPS	Planning & Data Production System
PCF	Process Control File
PGS	Product Generation System (ECS)

PI	Project Instruction
PLS	Planning Subsystem
QA	Quality Assurance
QO	Quality Office
RDBMS	Relation Data Base Management System
RSC	Raytheon System Company
SCDO	Science and Communications Development Office
SCF	Science Computing Facility
SCM	Software Configuration Management
SDL	Software Development Library
SDP	Science Data Processing
SDPF	Science Data Processing Facility
SDPS	Science Data Processing Segment
SDSRV	Science Data Server
SES	Scheduling and Execution Subsystem
SGI	Silicon Graphics International
SMC	System Monitoring and Coordinating Center or System Management Center
SNMP	simple network management protocol
SOW	Statement of Work
SSIT	Science Software Integration and Test
STMGT	Storage Management
TBD	To Be Determined
TRMM	Tropical Rainfall Measuring Mission (joint US - Japan)
URL	Universal Research Locator
US	United States
VATC	Verification and Acceptance Test Center
VCATS	Vendor Costing and Tracking System
VDD	Version Description Document
WWW	WorldWideWeb
