Dear Sir or Madam:

RRR000718

1 [I am opposed to the Yucca Mountain site to be used as a "dump" for radioactive waste - There are so many reasons -

I am terrified of earthquakes and this is a place that is/will be prone to earthquakes with 2 geologic faults running through it and 33 in the area -

Infiltration of water above and below does not provide a safe deposit - Plus any radioactive waste can run with any water - and eventually get into the drinking water -

I am concern about the people in the area and the danger of any transportation of any radioactive waste being moved for reasons I know must have been presented to you -]

Contact Onecountry.org for better suggestions - Evidently, Russia is using the waste at one site to fuel the reactor - Recycle back to the ^{nuclear} power plant - Can we do that

Sincerely,

Anne Marini
