# INPUT FILE DESCRIPTIONS

## Negotiations Model Input Files

**TCDATFIL** – contains 22 data inputs from 1901-2000 into the Negotiations model

**NRUNDATA** – sets switches for operational parameters and initial demands

**NCONCOF** – contains coefficients of area capacity curves, discharge rating curves, and monthly reservoir loss rates

**NCONTWO** – contains coefficients for the model’s calculation of forecasts of reservoir release and storage during the current seasonal reservoir fill.

**FLOWTARGETS** – contains instream flow targets used when calculating the percentage of time the model’s calculated reservoir releases supply alternative targets for instream flow.

**INSTCONT.OPR** - sets Truckee Meadows monthly water use input values used in the Negotiations Model

**STORAGLIMS** – contains monthly recreation storage targets

**LINENAMES** – provides labels for Negotiations model output

**Additnl.fish** – contains minimum, enhanced minimum and maximum instream flow targets for release from each reservoir and flow targets for water quality at Derby Dam and Pyramid. Note, from this file, only the enhanced minimum targets and the water quality based targets are normally used by the model. The minimum release targets normally used by the model and the preferred targets for reservoir release are both provided by the “nrundata” file.

**nrundt3** – sets M&I storage targets for California

## Instream and Minstrm Model Input Files

Calculations by the “instream” model are made for 19 periods per year and calculations made by the “minstrm” model are made for 12 one-month periods per year. Streamflow data input files used by each model are for either 19 periods per year or 12 one-month periods per year, depending upon which model reads a data file.

**INSTCONTRL** – sets Truckee Meadows water use input values used for instream flow model

**tahfrdloc.dist – contains 1960-2000 distribution values to calculate 19 flow periods for the Tahoe to Farad local area in cfs**

**hobart.mon – contains 1901-2000 monthly flow from Hobart Mills in cfs**

**hobart.reslt - contains 1947-2000 19 flow periods for Hobart Mills in cfs**

**hunter.final - contains 1961-2000 19 flow periods for Hunter Creek in cfs**

**ltditch.reslt - contains 1959-2002 19 flow periods for Little Truckee Ditch (diversion to Sierra Valley) in cfs**

**Sagehen.mon – contains 1901-2001 monthly flow from Sagehen Creek in acre-feet**

**Sagehen.parm19 – contains 1954-2000 19 flow periods for Sagehen Creek in cfs**

**Steamb.mon – contains 1901-2001 monthly flow from Steamboat Creek in acre-feet**

**steambcrk.parm19 - contains 1961-2001 19 flow periods for Steamboat Creek in cfs**

**stream.titles – labels for instream program**

Line #	Description
1	Donner and Independence monthly reservoir loss rates
2	Martis, Prosser and Stampede monthly reservoir loss rates
3	Boca and Dog Creek monthly reservoir loss rates
4	Lahontan monthly reservoir loss rates, based on historical loss values using from 1974-1994. Data used are 1974-Feb89 with 1974 area-capacity table, Mar89-1994 with 1989 area capacity table. Lines 1 through 4 have an implied decimal to the left of each number (for example "08" is 0.08 feet).
Lines 5 through 13 are "CA(I,J)" coefficient values	
5	Columns 1-5 are for Tahoe discharge rating, first equation
5	" 6-10 are Independence area vs volume, first equation
6	Independence area vs volume, second and third equations
7	Columns 1-5 are Posser and Stampede area vs volume, second eq.
7	" 6-10 are Boca area vs volume
8	Columns 1-5 are Lahontan area vs volume
8	" 6-10 are Tahoe discharge rating, second equation
9	Lower Truckee River November-March accretion equations (both)

This is the data set for 119,000 demand with California's data for Lake Tahoe included.

November 22, 2002.

This adds 1998-2000 data and corrects (1) Stampede 1997 data, (2) Boca local 1997 data, (3) Tahoe-Farad natural 1997 data, (4) Derby-Nixon local supply 1997 data, and (5) Delta Pyramid Lake Elev 1997 data.

This incorporates estimated data for 1981 through 1997.

The 1981 through 1989 data were updated and corrected June 1990.

The 1989 through 1991 data were added June 19, 1992. Derby to Pyramid local inflow for 1987 through 1996 is all estimated as zero. The 1987 through 2000 Truckee Meadows depletions are based upon an adjustment of observed depletions. "Observed depletions" are generally Farad to Derby but sometimes these are adjusted based upon Vista, Tracy and/or judgement.

The 1997 -2000 Derby to Pyramid depletions are based upon the difference between observed Farad to Pyramid depletion and the adopted Farad to Derby depletion.

The 1978 Carson nr. Ft Churchill data are corrected to agree with USGS.

In August 1998, Dog Creek for 1992 set equal to MBK data.

In August 1998, the 1992 Lower Dog and Sunrise set based on calculation.

Lake Tahoe net inflow fo 1989-1997 is based upon historic net inflow less 4,500 ac-ft per year, based upon the adjustment used in the "current conditions" study for the EIS/EIR.

1951 Donner inflow 800 acre-feet moved from December to January.

AND

July 1987 Lake Tahoe net inflow (#1) corrected from -36.4 to -46.4 on December 28, 1997. Note that draft EIS/EIR studies were run with the wrong value. The line #20 value looks all right and was not changed.

July-September 1997 Donner inflow changed to agree with the values calculated October 24, 2002 on that date.

Truckee Meadows base depletion (#18) for October 1901 was changed to 2.46 and for November 1901 was changed to -4.55 because these previously used values were biased by the initialization of the Truckee Meadows model and were not representative. (done July 6, 1998)

October 27, 1998 the 1993-1997 data as established or corrected in were incorporated. These data are described as follows:

Pyramid inflow target in June for #3LctUp is set at 360 cfs rather than 350 cfs as provided by USFWS. This done so that Jan-Apr will total 60,000 ac-ft and not miss a possible cui-ui spawn.

Maximum flow targets for Tahoe, Donner, Prosser, Independence and Stampede were changed June 23, 2000 to agree with July 19, 1999 Instream Flow Objectives table included with August 11, 1999 Draft California Guidelines.

June 23, Derby and Pyramid Water Quality targets changed to 135 cfs for May thru September.

Nov 16, 2001, the following "Cdfg3" for Prosser was changed to require only 5 cfs during November - March in accordance with TROA Section 9.C.5(b) which requires only minimum when storage is less than 9,800 ac-ft.
