# Fortran 90/95 Books

For a complete list of Fortran 90/95 see “The Fortran Market” or Mike Metcalf’s Fortran 90 Information. Both have links on the course web page.

- *Upgrading to Fortran 90*, Redwine. For people that already program in FORTRAN 77, this emphasizes the new features.
- *Fortran 90/95 Explained*, Mecalf and Reid. A good first book for learning the language without prior Fortran experience. This is the one I first learned Fortran 90 from.
- *Fortran 90 Programming*, Ellis, Philips and Lahey. Has more emphasis on programming style for Fortran 90.
- *Fortran 95 Handbook*, Adams, Brainerd, Martin, Smith and Wagener. A big fat reference book by members of the Fortran standards committee. Mine is getting worn out.
