## Report Highlights:

The new crop of Japanese "unshu mikan" tangerines is expected to produce good quality fruit with total output of a little over one million metric tons, up 27 percent from the previous season. A stable market price is expected throughout the season. In April 2007, the Japanese government launched the new subsidy program for "unshu mikan" growers, which focuses on a stable farm income through structural reforms. The new crop of Florida grapefruit expects total sales of 9 million cartons in Japan, recovering almost 90 percent from the prior season to pre-hurricane levels. South African grapefruit supported the Japanese market this summer when the supply was short from Florida. U.S. orange sales are quickly recovering in Japan and U.S. competitors have increased their market shares after the California freeze in 2007. The new crop U.S. lemons are expecting higher prices due to the short supplies from Arizona and Central California.

## 2007 Japanese "Unshu Mikan" Tangerines Expect Good Crop

The Japanese production of 2007 "unshu mikan" tangerines is estimated at 1,070,000 metric tons based on the field conditions of September 1, 2007, up approximately 27 percent from the previous season, according to Japan's fruit growers' association.

The 2007 Japanese citrus crop is in an "on-year" production cycle, which commonly bears more fruit per tree compared to the previous season. Many fruit trees including "unshu mikan" trees repeat "on-year" and "off-year" production cycle in alternate years and trees bear more fruit in "on-years" and less fruit in "off-years", as a part of the tree's natural production cycle.

In May 2007, the National Fruit Grower's Shipment Stabilization Committee set up guidelines for adequate production volume of "unshu mikan" tangerines by considering both supply and demand conditions for the 2007 crop. This process is essential to stabilize the Japanese market price. The production adjustment is commonly carried out by means of culling fruit from the trees. The committee outlined the level of adequate production and commercial shipments in 2007 for "unshu mikan" tangerines as follows:

| Estimated Production (in May 2007) | $1,100,000-1,130,000 \mathrm{MT}$ |
| :---: | ---: |
| Adequate Production | $1,070,000 \mathrm{MT}$ |
| Adequate Commercial Shipments | $950,000 \mathrm{MT}$ |
| (of that, Shipments to Fresh Markets) | $830,000 \mathrm{MT}$ |
| (of that, Shipments to the processing <br> sector) | $120,000 \mathrm{MT}$ |
| (of that, for juice processing) | $90,000 \mathrm{MT}$ |
| (of that, for canning process) | $30,000 \mathrm{MT}$ |

Japan experienced record-high temperatures in the summer of 2007 including Japan's major citrus producing regions Wakayama, Ehime and Saga prefectures. With high temperatures and drought it is expected that there will be a great deal of small sized fruit production in this season and Japan's citrus industry expects that the final production volume will decline to approximately 1 million metric tons. It is also important to note that many farmers participated in the "culling fruit" process in order to achieve the production goal. This process also increases the quality of the fruit and improves the market price situation.

Although high temperatures and drought created many small sized fruits in 2007 crops, the quality of the fruit was reportedly excellent with high sugar content and good flavor, according to Tokyo citrus traders. Brix levels (sugar content) are approximately 0.5 to 1.0 degree higher than the level of average years and acid levels are approximately 0.2 to 0.4 degrees lower this year. Well balanced sugar and acid levels create a good tasty fruit.

## New Crop "Unshu Mikan" Expects Fair Market Price

The quality of the 2007 crop "unshu mikan" tangerines has been reportedly good with good flavor, sweet taste, and good fruit appearance. Marketing early-crop fruit started in midSeptember in Tokyo. Although fruit sizes are smaller than the average year, commercial shipments in October are approximately 30 percent higher than the previous season. The average wholesale price in October was $\$ 1.67$ (195 yen) per kilogram, which was approximately 16 percent lower than the price of the last season. In the previous season,
"unshu mikan" tangerines were trading at record-high prices due to the significantly short supply situation. Early-crop "unshu mikan" tangerines will be sold in the market until the regular-crop varieties become available in December.

In mid October, Tokyo supermarkets sold early-crop "unshu mikan" for \$4.27 (498 yen) per bag of 10 small sized fruit, and $\$ 4.98$ ( 580 yen) per bag of 8 medium sized fruit.

* The exchange rate of 116.38 yen per dollar is based on the Nikkei News quote on October 5, 2007.

## Post Estimates Total Tangerines/ Mandarines Production at 1,115,000 MT in 2007

A great deal of Japanese tangerine/mandarin production is attributed by "unshu mikan" tangerines, but the production of "iyokan" and "hassaku" is not negligible. Both "iyokan" and "hassaku" are late varieties and their harvesting and marketing take place in late January and February when the sales of "unshu mikan" tangerines end. Fruit weight of "iyokan" is approximately 200 grams and the fruit has very sweet flavor and is juicy. The cultivar of "iyokan" is believed to be a natural tango. While, fruit weight of "hassaku" is approximately 400 grams and the cultivar of "hassaku" is believed to be a natural tangelo derived from pommelo. Post estimates the 2007 production of "iyokan" and "hassaku" to be 66,000 and 49,000 metric tons, respectively. In the PS\&D table, the 2007 production estimate of tangerines/mandarins shows $1,115,000$ metric tons, which includes "unshu mikan", "iyokan" and "hassaku" varieties.

## Government's New Subsidy Program Started in April 2007

The old direct payment price-subsidy program ended in March 2007. The new subsidy program focuses on the stabilization of farm business and farm income through structural reform in the fruit-producing regions. As a part of structural reform program, "unshu mikan" tangerine farmers are eligible to receive subsidies as follows:

| Reform Type | Subsidy Amount |
| :---: | :---: |
| Transplanting trees | 220,000 yen/10a |
| Grafting trees | Up to one half of the total cost |
| Abandoning groves | 100,000 yen/10a |
| - Exchange rate is 116.38 yen per dollar on October 5, 2007 |  |
| (by Nikkei News) |  |
| 10a equals to 0.2471 acres |  |

(Source: MAFF)
Transplanting to better fruit cultivars is commonly carried out to reflect the current market demand and to achieve a better production yield.

Projects conducted to improve farm infrastructures such as improving farm roads, reducing hilly lands, improving the soil conditions, improving the water ways, etc. farmers are eligible to receive subsidies up to one half of the total cost.

The new program also focuses on the stabilization of the market price by controlling the shipment volume of "unshu mikan" tangerines to the fresh produce market. In each year, the committee, which consists of the Ministry of Agriculture, Forestry and Fisheries (MAFF),
local governments and growers coops, sets an adequate shipment volume for the season by looking at both supply and demand situations and instructs growers how to adjust their production in order to meet the goal. The production adjustment is usually carried out by means of culling fruit from the trees. Farmers who participate in this program are eligible to collect subsidies with one half of the total cost.

During harvest, if the nation's total production exceeds the target production level, the committee suggests growers divert some shipments to the processing sector such as juicing or canning processes in order to avoid over-flooding the fresh produce market. Growers who participate in this program are eligible to receive $\$ 0.29$ ( 34 yen) per kilogram for the products diverted to processing.

## The Sales of Florida Grapefruit Expect 9 Million Cartons in the 2007/ 08

The sales of Florida grapefruit have been recovering very quickly in the Japanese market since the hurricanes hit Florida citrus growing regions in 2004 and 2005. Japanese traders expect sales of 9 million cartons (approximately 153,000 metric tons) in the 2007/08 season, which will be recovering almost 90 percent from the prior season to pre-hurricane levels.

The first shipment of new crop grapefruit left Florida on September 24 with a load of 7,000 cartons (approximately 119 metric tons) and is expected to arrive in Japan by early November, according to Japanese citrus traders. The fruit quality of the new crop is good and the fruit is juicy. Fruit size in general this season is relatively small due largely to the short rainfalls in August and September in the growing regions. This season's first shipment to Japan also was about one month later than the previous season.

The Florida Department of Citrus schedules a trade seminar for Japanese grapefruit buyers, users and media people in early November and this event truly signifies the start of Florida grapefruit sales promotions in Japan. The sales in early season are relatively slow but earlycrop fruit are largely used as a gift pack during Japan's traditional year- end gift giving season.

Florida grapefruit sales will come in full force in the New Year when the flavor of grapefruit improves with higher sugar content and balanced acid levels. It is also important to note that domestic citrus products such as unshu mikan tangerines dominate the Japanese citrus market until late January. Japanese citrus traders begin making their full sales pitch to market Florida grapefruit in February. The sales target is approximately 2 million cartons (metric tons) each month until May, according to traders at Tokyo Ohta Fresh Produce Market.

In late October 2007, South African grapefruit was the majority grapefruit marketed in Japan. South African grapefruit were trading at Tokyo Ohta Wholesale Market for $\$ 24.05$ ( 2,800 yen) per 17-kilogram carton for sizes $32,35,40,45,50$ and 55 (the size 32 has 32 grapefruit in a 17-kilogram carton). Japanese citrus traders expect that Florida grapefruit will likely market for $\$ 30.07$ ( 3,500 yen) per 17-kilogram cartons when they arrive in Japan in November.

In the retail sector, South African grapefruit are selling at various prices from $\$ 0.75$ (88 yen) to $\$ 0.85$ ( 100 yen) per fruit during the supermarket's sales promotional period. The regular supermarket price lies from $\$ 1.18$ (138 yen) to $\$ 1.54$ (180 yen) for a large sized fruit. Smaller sized fruit are selling at $\$ 3.41$ ( 398 yen) for a bag of 4 fruit and $\$ 4.27$ ( 498 yen) for 6 fruit. Both white and ruby/red fruit are selling at the same price.

## South African Grapefruit Enjoyed Fairly Stable Summer Market

The marketing of South African grapefruit starts in June when Florida fruit sales end and finishes when Florida's new crop arrives in Japan in early November. In the 2006/07 season, approximately 4 million cartons (68,000 metric tons) of South African grapefruit (including Swaziland fruit) were sold in J apan from June 2007 to October 2007.

Although the pre-season estimate indicated that approximately 5.5 million cartons ( 93,500 metric tons) would be sold in Japan in the 2006/07 season, the final sales count was reduced significantly due to (1) the strong demand in European countries, (2) the unfavorable exchange rate for the Japanese yen, and (3) the higher ratio of smaller sized fruit, according to Japanese traders. The fruit quality in general was good through out the season and it maintained reasonably higher market prices during the season. In July 2007 when sales were at the peak, South African grapefruit were trading at $\$ 25.77$ ( 3,000 yen) per 17kilogram carton for large sized fruit, $\$ 24.05$ ( 2,800 yen) for medium sized ones and $\$ 21.48$ ( 2,500 yen) for small sized ones at Tokyo Ohta Wholesale Market.

## 400,000 Cartons of Israel Sweeties Expected Arriving Japan in the 2007/ 08

According to Japanese trade sources, Israel plans to export 400,000 cartons (approximately 5,600 metric tons) of Sweeties to Japan in the 2007/08 season, down approximately 20 percent from the level of the previous season. The first shipment is scheduled to arrive in Japan by reefer containers in late October with 150,000 cartons (approximately 2,100 metric tons). The rest is scheduled to be in Japan in late November by chartered boat.

In the recent years, the sales of Israel Sweeties have been declining. It was at over one million cartons ( 14,000 metric tons) when the sales were at the peak prior to 2000 . When Sweeties were first introduced into Japan in mid 90s it created a sales boom in Japan's citrus market; however, the boom has left and the sales have declined in the past a few years.

## U.S. Orange Sales Recovering to 5 Million Cartons in the 2007/ 08

California orange groves were significantly damaged by freezing temperatures in the 2006/07 season and Japanese sales of U.S. oranges reached only 2.6 million cartons (44,500 metric tons). Post estimates the new crop U.S. orange sales to recover to the pre-freeze sales level of approximately 5 million cartons ( 85,000 metric tons).

According to Japanese trade sources, the new crop California Navels are arriving Japan in late November, which signifies the start of U.S. orange sales for the new season. Groves completely recovered from the last season's freeze and it has been reported that the new crop has many high quality fruits. Import prices are expected to be higher in this season since there are many high quality fruit, according to Tokyo citrus traders.

## Diversifying Supply Sources in J apan's Orange Market

U.S. oranges are largely sold in Japan from December to July when the new crop navel and Valencia oranges become available in the United States; however, this was not a case in the

2006/07 season due to the freeze in California in January 2007. In the spring of 2007, U.S. orange supplies were extremely short and the Japanese market prices of oranges skyrocketed. In some instances, California navel oranges were trading at $\$ 55.85$ ( 6,500 yen) per 17-kilogram carton at Tokyo Ohta Wholesale Market, which was almost twice as high as the price of the previous season. In this unstable market situation Japanese traders were looking for new supply sources of oranges.

In March 2007, the first shipment of Israel sweet oranges arrived in Japan and oranges were sold at 10 to 20 percent cheaper than the price of California navel oranges. Israel sweet orange was a seedless type. I srael sold approximately 450,000 cartons ( 7,683 metric tons) of sweet oranges from March to June 2007. There were no sales of Israel oranges in the previous season.

In February 2007, Tarocco oranges from Sicily, Italy were introduced to the Japanese market. Tarocco had red-color flesh, a similar variety to U.S. Moro orange and was easily peeled by hands. Tarocco oranges were trading at \$34.37 (4,000 yen) per 7-kilogram carton at Tokyo Ohta Wholesale Market. Tarocco oranges were sold nationwide at department stores and supermarkets. Italy sold approximately 100,000 cartons ( 700 metric tons) of Tarocco oranges from February to May 2007.

In May 2007, a large volume of Valencia oranges from Spain arrived in Japan. Spanish Valencia oranges were trading at $\$ 36.94$ ( 4,300 yen) per 14-kilogram carton at Tokyo Ohta Wholesale Market. The total imports of Spanish Valencia were approximately 36,000 cartons ( 508 metric tons) from April to June 2007. There were no orange imports from Spain in the previous season.

Mexico also supplied Valencia oranges from March to June 2007 with the total volume of approximately 50,000 cartons ( 835 metric tons). Mexican Valencia oranges were trading at $\$ 42.96$ ( 5,000 yen) per 17-kilogram carton, a similar price to California Valencias at Tokyo Ohta Wholesale Market. There were no orange imports from Mexico in the previous season.

## New Crop US Lemons Expecting Higher Market Prices

According to Japanese traders, new crop lemons from the United States are trading at significantly higher prices this season since the fresh lemon output from Arizona and Central California are expecting to decline significantly.

New crop products from Arizona and California arrived in the Japanese market in late October and the U.S. products were slowly replacing the products from Chile and South Africa in the retail stores, which were largely sold during the summer season. In early November, new crop lemons (from Arizona) were trading at $\$ 47.25$ ( 5,500 yen) per 17kilogram carton at Tokyo Ohta Wholesale Market, which was almost twice as high as the price of the previous season. Chile lemons were trading at a similar price to U.S. lemons

In early November, Tokyo supermarket sold Chile lemons at $\$ 0.84$ (98 yen) for a large sized fruit and $\$ 1.70$ (199 yen) for a bag of 3 medium sized lemons.

## I mport Duties on Citrus Products

All duties are charged on a CIF basis. These duties are not subject to further reductions outside the next round of WTO negotiations. The applicable import duties for citrus products are as follows:

| TARIFF CODE (HS) | DESCRIPTION | DUTY RATE <br> (\%) |
| :---: | :---: | :---: |
| 0805.10-000 | Fresh Orange, <br> Imports during the December-May period | 32 \% |
|  | Fresh Orange, Imports during the June- November period | 16 \% |
| 0805.40-000 | Fresh Grapefruit | 10 \% |
| 0805.30-010 | Fresh Lemon | Free |
| 2009.11-110 | Orange Juice, Frozen, Containing added sugar, Not more than $10 \%$ by weight of sucrose, naturally and artificially contained | 25.5 \% |
| 2009.11-190 | Orange Juice, Frozen, Containing added sugar, Other | $29.8 \%$ or 23 yen $/ \mathrm{kg}$, whichever is the greater |
| 2009.11-210 | Orange Juice, Frozen, Not containing added sugar, Not more than $10 \%$ by weight of sucrose | 21.3 \% |
| 2009.11-290 | Orange J uice, Frozen, Not containing added sugar, Other | 25.5 \% |
| 2009.12-110 | Orange Juice, Not frozen, of a Brix value not exceeding 20, Containing added sugar, Not more than $10 \%$ by weight of sucrose, naturally and artificially contained | 25.5 \% |
