

## 2005 Dishwasher Energy Data

### What do the energy consumption numbers on this table mean?

Energy consumption for these appliances is measured in kilowatt-hours (kWhs). The more energy an appliance consumes, the more it will cost to operate. One kilowatt-hour (kWh) is the amount of electrical energy supplied by one kilowatt over a one-hour period. It is the basic unit of measurement for electrical energy. Electricity bills are based in part on the number of kilowatt-hours a customer uses during a billing period. These consumption figures do not include the cost of water.

### What is the difference between a compact and standard capacity dishwasher?

Standard capacity includes portable or built-in dishwasher models with a capacity of eight (8) or more place settings. Compact capacity includes countertop dishwasher models with a capacity of fewer than eight (8) place settings.

### June 2005 Dishwashers - Listed by Energy Use

Brand Name	Model Number	Energy Consumption (kWh/Yr)	Capacity
