This Cl	ass 534 is considered to be an	558	.Diazo or diazonium (e.g., -N=N-C, etc.)
integral part of Class 260 (see the Class		559	With preservative or stabilizer
260 schedule for the position of this		560	
	n schedule hierarchy). This Class		Hetero ring containing
retains	all pertinent definitions and	561	Plural diazo or diazonium groups
class 1	ines of Class 260.	562	Heavy metal or aluminum containing
		563	Polycyclo ring system having at least three cyclos
	ORGANIC COMPOUNDS (CLASS 532, SUBCLASS 1)	564	Aldehyde or ketone group containing
7	.Noble gas containing (i.e., He,	565	Formation of diazonium group
	Ne, Ar, Kr, Xe, or Rn	566	.Azoxy
	containing)	567	Hetero ring containing
10	.RADIOACTIVE METAL CONTAINING	568	Azodioxy
	(At. No. 43, 61 or 84+; or	569	Heavy metal or aluminum
	radioactive isotope of another		containing
	metal)	570	Sulfonic acid group containing
11	Actinide series metal (At. No.		(-(0=)S(=0)-OH, wherein H of -
	89+)		OH may be replaced by a
12	Containing $-C(=X)-$, wherein X		substituted or unsubstituted
	is chalcogen (e.g., carbonyl		ammonium ion or metal)
	containing, etc.)	571	Stilbene containing
13	The $-C(=X)$ - is part of a -	572	Formation of azoxy group
	C(=X)X- group, wherein the X's	573	.Azo
	are the same or diverse	574	Quaternary azo group containing
	chalcogens	575	Specified crystalline form
14	Technetium containing (At. No.	576	With preservative or stabilizer
	43; Tc)	577	Liquid crystal (e.g.,
15	.RARE EARTH METAL CONTAINING (At.		pleochroic, etc.)
	No. 21, 39, 57-60 or 62-71)	578	Formation of azo group by
16	Containing $-C(=X)X-$, wherein		oxidative coupling
	the X's are the same or	579	Formation of azo group by
	diverse chalcogens		simultaneous diazotization and
550	.Diazoamino (e.g., triazenes,		coupling
	etc.)	580	Formation of azo group from
551	Hetero ring containing		diazoamino group
552	Chalcogen or additional	581	Formation of azo group by
	nitrogen bonded directly to		coupling diazonium compound
	the diazoamino group		with coupling component in
553	Noncarbon atom double or triple		presence of an additional
	bonded and the diazoamino		organic compound
	group bonded directly to the	582	Formation of azo group by
	same acyclic carbon		coupling diazonium compound
554	Plural benzene rings bonded		with coupling component at a
	directly to the diazoamino		specified pH range
	group	583	Formation of azo group by
555	Processes		coupling diazonium compound
556	.Diazooxide or diazotate (e.g., -		with coupling component in
	N=N-0-, etc.)		presence of ammonia, a Group
557	Sulfur attached directly to a		IIA light metal hydroxide or a
	ring by nonionic bonding		Group IA or IIA light metal
			phosphate

F 0 4		605	
584	Formation of azo group by coupling diazonium compound	605	The pentavalent nitrogen is a ring member
	with coupling component in	606	Azo bonded directly to a
	other than stoichiometric		hetero ring or to a polycyclo
	proportions		ring system having a hetero
585	Formation of azo group by		ring as one of the cyclos
	reduction of nitro group	607	The hetero ring contains
586	Formation of azo group from		the pentavalent nitrogen
	group having nitrogen single	608	Plural azo groups in the
	bonded to nitrogen		same azo moiety attached
587	Formation of azo group directly		indirectly to each other by
	from nitrogen containing		nonionic bonding
	compound by process other than	609	Acyclic carbon bonded
500	diazotization and coupling		directly to the azo group
588	Process utilizing azo compound	610	Additional hetero ring or
F00	as reactant		polycyclo ring system having a
589	Formation of quaternary		hetero ring as one of the
F00	ammonium or hydrazinium group		cyclos bonded directly to the
590 591	Ring formationFormation of -C(=X)HNH group,	611	azo groupThe hetero ring is one of
291	wherein X is chalcogen	011	the cyclos in a polycyclo ring
	(substitution may be made for		system
	hydrogen only)	612	Acyclic -C(=X)-, wherein X
592	Formation of sulfonamide group	V	is chalcogen, attached
593	Additional reactant containing		directly or indirectly to the
	phosphorus or sulfur		hetero ring by nonionic
594	Sulfonic acid group formed or		bonding
			<u> </u>
	added to the azo reactant (-	613	Heavy metal or aluminum
	added to the azo reactant (- $(0=)S(=0)-OH$, wherein H of $-OH$		_
	(0=)S(=0)-OH, wherein H of $-OH$ may be replaced by a	613 614	Heavy metal or aluminum containingPlural azo groups attached

623	Diverse azo moieties bonded to the same metal	641	Alkylene, alkenyl or alkenylene bonded directly to
624	At least two such hetero rings attached indirectly to each other by nonionic bonding		sulfonyl or sulfonamido, which sulfonyl or sulfonamido is between a ring and the
625	Plural azo groups in the same azo moiety attached	642	alkylene, alkenyl or alkenylene
626	<pre>indirectly to each other by nonionic bondingChalcogen or carbon bonded</pre>	042	The alkylene, alkenyl or alkenylene and the ring are both bonded directly to the
020	directly to the six-membered hetero ring and is between the hetero ring and the azo group	643	same sulfonyl groupAlkylene, alkenyl or alkenylene bonded directly to
627	Plural halogens attached directly to the hetero ring by nonionic bonding		carboxamido, urea or $-C(=X)-$, wherein X is chalcogen, which group is between a ring and
628	Diverse hetero ring containing	C 4 4	the alkylene, alkenyl or alkenylene
629	Alkylene, alkenyl or alkenylene bonded directly to sulfonyl or sulfonamide, which sulfonyl or sulfonamide is between a ring and the alkylene, alkenyl or	644	Alkylene, alkenyl or alkenylene and a ring bonded directly to the same chalcogen or to plural chalcogens which are bonded directly to each other
630	alkenyleneHalogen attached directly to a	645	Plural sulfonyl groups bonded directly to same amino
030	hetero ring or to an alicyclic ring by nonionic bonding		<pre>nitrogen (e.g., sulfonylaminosulfonyl, etc.)</pre>
631	Stilbene containing	646	Sulfonyl and carbonyl bonded
632	The hetero ring is six- membered and contains at least two nitrogens		<pre>directly to the same amino nitrogen (e.g., sulfonylaminocarbonyl, etc.)</pre>
633	<pre>Polycyclo ring system having the hetero ring as one of the cyclos</pre>	647	<pre>Plural amino nitrogens bonded directly to the same sulfonyl (e.g., aminosulfonylamino,</pre>
634	At least two such hetero rings attached indirectly to each other by nonionic bonding	648	<pre>etc.)Alkyl, having at least eight carbons specified, or plural</pre>
635	Additional hetero ring containing		alkyl chains, each having at least five carbons specified,
636	Pyrazole containing (including hydrogenated)		bonded directly to a ring, which ring is attached directly or indirectly to an
637	Plural azo groups attached indirectly to each other by nonionic bonding		acyclic carbon chain, which chain is bonded directly to a urea or carboxamide nitrogen
638	The hetero ring and benzene ring, to which an azo group is bonded directly, bonded directly to the same nitrogen	649	that is between the chain and an additional ring Alkyl chain having at least
639	Aziridine containing (including unsaturated)		eight carbons specified bonded directly to a ring
640	Alkylene, alkenyl, alkenylene, alkynyl or alkynylene attached directly or indirectlyto a ring by nonionic bonding	650	<pre>Sulfonyl or -C(=X)-, wherein X is chalcogen, between a ring and an alkyl chain having at least eight carbons specified</pre>

651	The sulfonyl or -C(=X)- is bonded directly to the ring	668	Additional monocyclic benzene ring having plural hydroxy
652	Formazan containing (i.e., HNH- N=CH-N=NH, wherein substitution may be made for hydrogen only)		groups, hydroxy and nitrogen, or plural nitrogens bonded directly thereto, wherein the nitrogen is other than as
653	Polycyclo carbocyclic ring system having at least three cyclos	669	<pre>nitro, nitroso or azoAdditional -C(=X)-, wherein X is chalcogen</pre>
654	The polycyclo ring system consists of three six-membered cyclos and has plural oxygens	670	Two azo groups attached indirectly to each other by nonionic bonding
	bonded directly thereto	671	Sulfonic acid group
655	Hetero ring containing		containing $(-(0=)S(=0)-OH$,
656	At least two such ring systems having plural oxygens bonded directly thereto		wherein H of -OH may be replaced by a substituted or unsubstituted ammonium ion or metal)
657	The polycyclo ring system has no azo group bonded directly thereto	672	Plural monocyclic benzene rings, each having hydroxy and
658	Chalcogen double bonded		carbonyl of -COO- bonded
	directly to the polycyclo ring		directly thereto
	system	673	Additional $-C(=X)-$, wherein
659	Bicyclo carbocyclic ring system		X is chalcogen
	<pre>consisting of a six-membered ring and a five-membered ring (e.g., indane, etc.</pre>	674	Sulfonic acid group containing $(-(0=)S(=0)-OH$, wherein H of -OH may be replaced by a
660	Hydroxy and carbonyl of -C00-		substituted or unsubstituted
	bonded directly to a	675	ammonium ion or metal)Azo attached indirectly to
	<pre>monocyclic benzene ring (H or hydroxy may be replaced by a substituted or unsubstituted</pre>	0/5	the monocyclic benzene ring by nonionic bonding
	ammonium ion or a metal)	676	Plural -HNH groups or -OH and -
661	Heavy metal or aluminum containing		HNH bonded directly to a monocyclic benzene ring (H of
662	Hetero ring containing		-OH may be replaced by a
663	Plural azo groups in the same		substituted or unsubstituted
	azo moiety attached indirectly	677	ammonium ion or metal)
	to each other by nonionic bonding	077	Plural azo groups in the same azo moiety attached indirectly to each other by nonionic
664	Hetero ring containing		bonding
665	Azo bonded directly to the	678	Sulfonic acid group
	hetero ring or to a polycyclo ring system which contains the hetero ring as one of the cyclos	070	containing (-(0=)S(=0)-OH, wherein H of -OH may be replaced by a substituted or
666	At least three azo groups		unsubstituted ammonium ion or
-	attached indirectly to each other by nonionic bonding	679	<pre>metal)Plural monocyclic benzene</pre>
667	Plural monocyclic benzene rings, each having hydroxy and		rings, each having -OH and - HNH or plural -HNH groups
	carbonyl of -COO- bonded		bonded directly thereto
	directly thereto	680	<pre>Exactly three azo groups attached indirectly to each other by nonionic bonding</pre>

681	Sulfonic acid group containing (-(0=)S(=0)-OH, wherein H of -OH may be replaced by a	702	Polycyclo ring system containing the hetero ring as
	substituted or unsubstituted ammonium ion or metal)	703	<pre>one of the cyclosAzo bonded directly to the polycyclo ring system</pre>
682	Plural hydroxy groups or esters thereof bonded directly to a monocyclic benzene ring (H of hydroxy may be replaced by a substituted or unsubstituted ammonium ion or metal)	704	The azo group is attached indirectly in the same azo moiety to an additional azo group or to an acyclic chain which contains a -CH=N- group by nonionic bonding
683	Azo bonded directly to the benzene ring	705	Plural ring nitrogens in the polycyclo ring system
684	Heavy metal or aluminum containing	706	Quinoline or isoquinoline containing (including
685	At least three azo groups		hydrogenated)
	attached indirectly to each other by nonionic bonding	707	<pre>Azo bonded directly to the hetero ring</pre>
686	Hetero ring containing	708	At least three azo groups in
687	<pre>Plural monocyclic benzene rings, each having plural hydroxy groups or esters</pre>		the same azo moiety attached indirectly to each other by nonionic bonding
	thereof bonded directly thereto	709	Two azo groups in the same azo moiety attached indirectly
688	Two azo groups attached indirectly to each other by		to each other by nonionic bonding
	nonionic bonding	710	Pyrazole (including
689	Stilbene containing		hydrogenated)
690	Heavy metal or aluminum containing	711	Sulfonyl bonded directly to a ring
691	Hetero ring containing	712	Additional chalcogen
692	Heavy metal or aluminum containing		bonded directly to the sulfonyl
693	Amine salt	713	Benzene ring containing
694	Arsenic containing	714	At least three azo groups in
695	Azo moiety and moiety which contains acyclic -CH=N- group bonded to the same metal		the same azo moiety attached indirectly to each other by nonionic bonding
696	Diverse azo moieties bonded to	715	Plural monocyclic benzene
	the same metal		rings attached directly to
697	Hetero ring containing		each other by nonionic bonding
698	Hetero ring in each azo moiety	716	and are between azo groupsTwo azo groups in the same
699	Plural azo groups in the same azo moiety attached indirectly to each other by nonionic		azo moiety attached indirectly to each other by nonionic bonding
	bonding	717	Containing $-C(=X)-$, wherein
700	Azo bonded directly to an		X is chalcogen (e.g.,
	acyclic carbon which is bonded		carbonyl, etc.)
	directly to two acyclic	718	Plural monocyclic benzene
	carbons, each of which is		rings attached directly or
	double or triple bonded to an		indirectly to each other by
	atom		acyclic nonionic bonding and
701	Hetero ring containing		are between the azo groups

753	Azo bonded directly to the hetero ring or to a polycyclo ring system which contains the hetero ring as one of the	768	<pre>The hetero ring is in a bicyclo ring system (e.g., quinoline, benzomorpholine, etc.)</pre>
754	cyclos	769	Pyrazole (including
754	At least three azo groups attached indirectly to each other by nonionic bonding	770	<pre>hydrogenated)The hetero ring is six- membered and consists of one</pre>
755	<pre>Additional hetero ring or polycyclo ring system which contains a hetero ring as one</pre>	771	<pre>nitrogen and five carbons (e.g., pyridine, etc.)Acyclic oxygen bonded</pre>
	of the cyclos bonded directly		directly to the hetero ring
756	to an azo groupTwo azo groups attached indirectly to each other by nonionic bonding	772	Plural acyclic chalcogens bonded directly to the hetero ring at the two positions adjacent to the ring nitrogen
757	Additional hetero ring or polycyclo ring system which contains a hetero ring as one of the cyclos bonded directly to an azo group	773	Plural acyclic nitrogens, other than as nitro, nitroso or azo, bonded directly to the hetero ring at the two positions adjacent to the ring
758	<pre>Both hetero rings or polycyclo ring systems are between the azo groups</pre>	774	<pre>nitrogenAdditional hetero ring attached indirectly to the azo</pre>
759	Plural monocyclic benzene rings, each bonded directly to an azo group, are between the azo groups	775	group by nonionic bondingThe additional hetero ring or a polycyclo ring system which contains the additional
760 761	The benzene rings are bonded directly to each otherBoth azo groups are bonded directly to the hetero ring or		hetero ring as one of the cyclos is bonded directly to a ring, which ring is between the azo group and the
762	to the polycyclo ring systemPolycyclo ring system having at least three cyclos, at least one of which is a hetero ring	776	additional hetero ringA ring and the additional hetero ring or a polycyclo ring system which contains the additional hetero ring as one
763	Bicyclo carbocyclic ring system		of the cyclos are bonded directly to the same nitrogen
764	<pre>Additional ring bonded directly to the hetero ring or to the polycyclo ring system</pre>	777	<pre>The additional hetero ring or a polycyclo ring system which contains the additional</pre>
765	Additional hetero ring or polycyclo ring system which contains a hetero ring as one of the cyclos bonded directly to the azo group		hetero ring as one of the cyclos is bonded directly to an alkylene chain, which chain is between the azo group and the additional hetero ring
766	The hetero ring is six- membered and contains nitrogen (e.g., pyridine, etc.)	778	<pre>Bicyclo carbocyclic ring system bonded directly to the azo group</pre>
767	The hetero ring contains at least two nitrogens (e.g., pyrimidine, etc.)	779	The bicyclo carbocyclic ring system is between the azo group and an additional carbocyclic ring

780	Sulfonic acid group containing (-(0=)S(=0)-OH, wherein H of the -OH may be replaced by the ammonium ion or Group IA or IIA light	798 799	Plural carbocyclic rings bonded directly to the azo groupThe hetero ring or a polycyclo ring system which
781	<pre>metal)Sulfonic acid group containing (-(0=)S(=0)-OH, wherein H of the -OH may be replaced by the ammonium ion or a Group IA or IIA light metal)</pre>		contains the hetero ring as one of the cyclos is bonded directly to one of the carbocyclic rings or to a bicyclo ring system which contains the carbocyclic ring as one of the cylcos
782	The hetero ring is one of the cyclos in a polycyclo ring system	800	The hetero ring is one of the cyclos in a polycyclo ring system
783	Additional sulfonyl containing	801	The carbocyclic ring or a bicyclo ring system which
784	Plural sulfonic acid groups		contains the carbocyclic ring
785	Containing acyclic -C(=X)-, wherein X is chalcogen		as one of the cyclos and the hetero ring or a polycyclo
786	The -C(=X)- is bonded directly to nitrogen		ring system which contains the hetero ring as one of the
787	The hetero ring is one of the cyclos in a polycyclo ring system	802	cyclos are bonded directly to the same carboxamide groupThe carbocyclic ring or a
788	The hetero ring consists of sulfur, nitrogen and carbon (e.g., benzothiazole, etc.)		bicyclo ring system which contains the carbocyclic ring as one of the cyclos and the
789	Chalcogen double bonded directly to the hetero ring		hetero ring or a polycyclo ring system which contains the
790	<pre>The hetero ring is five- membered and consists of one nitrogen and four carbons (e.g., indole, etc.)</pre>	803	hetero ring as one of the cyclos are bonded directly to the same nitrogen atomThe hetero ring is six-
791	Carbocyclic ring bonded		membered and contains at least two nitrogens
	directly to the hetero ring or to the polycyclo ring system	804	The hetero ring or a
792	which contains the hetero ringPyrazole containing		polycyclo ring system which contains the hetero ring as one of the cyclos is bonded
	(including hydrogenated)		directly to an alkylene chain,
793	Sulfonyl containing		which chain is between the
794	Carbocyclic ring attached indirectly to the azo group by		hetero ring and the carbocyclic ring
795	nonionic bondingThe hetero ring is five-	805	Exactly five or exactly six azo
	membered and contains at least		groups attached indirectly to each other by nonionic bonding
	one atom each of sulfur, nitrogen and carbon	806	<pre>Exactly four azo groups attached indirectly to each</pre>
796	At least three azo groups attached indirectly to each	807	other by nonionic bondingPlural nitrogens bonded
797	other by nonionic bondingTwo azo groups attached		directly to the same -C(=X)-group, wherein X is chalcogen
	indirectly to each other by nonionic bonding	808	<pre>(e.g., urea, thiourea, etc.)Benzidine containing</pre>

809	Exactly three azo groups attached indirectly to each other by nonionic bonding	825	Plural nitrogens, other than as nitro, nitroso or azo, attached indirectly to azo by
810	<pre>Containing -C(=X)-, wherein X, is chalcogen or nitrogen (e.g., carbonyl, etc.)</pre>	826	nonionic bondingPlural sulfonic acid groups bonded directly to the same
811	<pre>Nitrogen single bonded directly to the -C(=X)- group (e.g., carboxamide, guanyl, etc.)</pre>		bicyclo ring system (- $(0=)S(=0)-OH$, wherein H of the -OH may be replaced by the ammonium ion or a Group IA or
812	Plural -C(=X)- groups containing	827	<pre>IIA light metal)Hydroxy bonded directly to a</pre>
813 814	Benzidine containingHydroxy and nitrogen, other than as nitro, nitroso or azo, bonded directly to the same bicyclo ring system (H of hydroxy may be replaced by the ammonium ion or a Group IA or	828	bicyclo ring system which is between the azo groups (H of hydroxy may be replaced by a substituted or unsubstituted ammonium ion or a Group IA or IIA light metal) Plural bicyclo ring systems,
815	IIA light metal)Hydroxy bonded directly to a		each having hydroxy bonded directly thereto
013	bicyclo ring system (H of hydroxy may be replaced by the ammonium ion or a Group IA or	829	Containing -C(=X)-, wherein X is chalcogen (e.g., carbonyl, etc.)
816	<pre>IIA light metal)Exactly two azo groups attached indirectly to each other by nonionic bonding</pre>	830	Hydroxy and the -C(=X)- are bonded directly to the same bicyclo ring system (H of hydroxy may be replaced by a
817	Plural benzene rings bonded directly to the same urea or thiourea group and are between		substituted or unsubstituted ammonium ion or a Group IA or IIA light metal)
818	the azo groupsBicyclo ring system	831	Plural benzene rings bonded directly to each azo group
819	containingPlural benzene rings bonded	832	At least one of the benzene rings is part of a bicyclo
	directly to the same carboxamide or sulfonamide	833	ring systemEach of the benzene rings is part of a bicyclo ring system
	group and are between the azo groups	834	Hydroxy bonded directly to
820	Plural carboxamide groups between the azo groups		the bicyclo ring system (H of hydroxy may be replaced by the ammonium ion or a Group IA or
821	Plural benzene rings bonded directly to the same chalcogen or -C(=X)- group, wherein X is chalcogen, and are between the azo groups	835	IIA light metal)Plural bicyclo ring systems, each having hydroxy bonded directly thereto
822	Plural benzene rings bonded directly to each other and are between the azo groups	836	<pre>Additional hydroxy or nitrogen, other than as nitro, nitroso or azo, bonded</pre>
823	<pre>Containing -C(=X)-, wherein X is chalcogen (e.g., carbonyl, etc.)</pre>		directly to the bicyclo ring system
824	Nitrogen, other than as nitro, nitroso or azo, attached indirectly to azo by nonionic bonding		

837	Sulfonic acid group bonded directly to the bicyclo ring system (-(0=)S(=0) OH, wherein H of the -OH may be replaced by	854	Additional -C(=X)- bonded directly to nitrogen, which nitrogen is bonded directly to a ring
838	the ammonium ion or a Group IA or IIA light metal)Exactly one azo group	855	<pre>Chalcogen, having no direct bond to a ring, attached directly by a single bond to</pre>
	containing or azo attached indirectly to an additional	856	acyclic carbonNitrogen, other than as
839	<pre>azo group by ionic bondingPlural benzene rings bonded directly to the azo group</pre>		<pre>nitro or nitroso, attached indirectly to the azo group by nonionic bonding</pre>
840	Each of the benzene rings is part of a bicyclo ring system	857	Hydroxy bonded directly to acyclic carbon or carbon chain
841	Containing -C(=X)-, wherein X is chalcogen (e.g., carbonyl, etc.)		(H of hydroxy may be replaced by the ammonium ion or Group IA or IIA light metal)
842	Hydroxy bonded directly at the 2-position of the bicyclo ring system (H of hydroxy may	858	Plural chalcogens bonded directly to the acyclic carbon or carbon chain
	be replaced by the ammonium ion or a Group IA or IIA light	859	Chalcogen bonded directly to a ring
843	metal)Each of the benzene rings is	860	Acyclic -C(=X)- containing, wherein X is chalcogen (e.g.,
0.4.4	monocyclic	0.61	carbonyl, etc.)
844	Sulfonyl containing	861	Hydroxy bonded directly to a
845	<pre>Oxygen bonded directly to the sulfonyl group (e.g., sulfonic acid, etc.)</pre>		bicyclo ring system (H of hydroxy may be replaced by a substituted or unsubstituted
846	Plural oxygens bonded directly to the sulfonyl group	862	ammonium ion or a Group IA or IIA light metal)
847	<pre>(e.g., sulfuric acid, etc.)The sulfonyl is part of a sulfonamide group (-</pre>	002	<pre>Nitrogen bonded directly to the -C(=X)- group (e.g., carboxamide, etc.)</pre>
	(0=)S(=0)HNH, wherein	863	The $-C(=X)$ - is bonded
	substitution may be made for hydrogen only)		directly to the bicyclo ring system
848	Containing $-C(=X)-$, wherein	864	Sulfonyl containing
849	X is chalcogenThe -C(=X)- is bonded	865	Additional acyclic - C(=X)- group
	directly to nitrogen, which nitrogen is bonded directly to a ring	866	<pre>Additional nitrogen bonded directly to the additional -C(=X)- group</pre>
850	Containing -C(=X)-, wherein X is chalcogen	867	At least three - C(=X)HNH groups, wherein
851	The -C(=X)- is bonded directly to one of the	0.60	substitution may be made for hydrogen only
0.5.0	benezene rings	868	Additional amino nitrogen
852	The -C(=X)- is in a - C(=X)X- group, wherein the X's may be the same or diverse	869	Plural oxygens bonded directly to the same monocyclic benzene ring
	chalcogens	870	
853	The $-C(=X)X-$ is in a $-C00H$	0,0	the azo group and an
333	group (H of OH may be replaced		additional halogen or acyclic
	by the ammonium ion or a Group		carbon, all bonded directly to
	IA or IIA light metal)		the same benzene ring
	<u> </u>		-

871	Acyclic carbon, carboxamide and chalcogen or an additional acyclic carbon, all bonded directly to the same benzene ring	<u>DIGESTS</u>	
872	The nitrogen is additionally bonded directly to the bicyclo ring system	DIG 1 DIG 2	MIXTURES OF AZO COMPOUNDS AZO COMPOUNDS CONTAINING CHAINS OF EIGHT OR MORE CARBON ATOMS
873	Additional acyclic - C(=X)- group		NOT PROVIDED FOR ELSEWHERE IN THIS CLASS
874	The -C(=X)- is bonded directly to the bicyclo ring system	DIG 3	POLYMERIC AZO COMPOUNDS OR AZO COMPOUNDS CONTAINING POLYMERIC MOIETIES
875	Nitrogen, other than as nitro or nitroso, attached indirectly to the azo group by nonionic bonding	DIG 4 DIG 5	AZO COMPOUNDS WHICH ARE LAKES AZO COMPOUNDS HAVING UTILITY OTHER THAN AS DYES
876	Oxygen bonded directly to carbon	DIG 6	AZO COMPOUNDS CONTAINING -N(O)- N=, -N=S, OR -SO2N3 GROUPS
877	The nitrogen and the oxygen are bonded directly to the same bicyclo ring system	DIG 7	AUTOMATIC AND/OR CONTINUOUS TEMPERATURE CONTROL IN THE PREPARATION OF AZO COMPOUNDS ELIMINATION OF GROUPS DURING THE
878	Sulfonyl bonded directly to the bicyclo ring system		PREPARATION OF AZO COMPOUNDS
879	Plural sulfonyl groups or plural nitrogens bonded directly to the bicyclo ring system	DIG 9	AZO COMPOUNDS CONTAINING TERNARY SULFONIUM GROUPS AZO COMPOUNDS CONTAINING FORMALDEHYDE REACTION PRODUCT
880	Additional sulfonyl which is attached indirectly to the bicyclo ring system by nonionic bonding		AS THE COUPLING COMPONENT
881	Sulfonyl and the nitrogen bonded directly to the same bicyclo ring system		
882	Oxygen double bonded directly to sulfur		
883	Sulfonyl bonded directly to a bicyclo ring system		
884	<pre>Plural sulfonyl groups bonded directly to the same bicyclo ring system</pre>		
885	Benzene ring bonded directly to the azo group		
886	<pre>Containing -C(=X)-, wherein X is chalcogen (e.g., carbonyl, etc.)</pre>		
887	Purification or recovery
