

Network Operations Center, and cutting-edge network monitoring and security. We use RADIUS (Remote Authentication Dial-In User Service), a distributed security system that authenticates users and prevents unauthorized access to networks and network services.

Capabilities of the network and the facilities.

- 30 major markets served
- National OC48/OC12 packet-over-SONET Internet backbone
- RSVPView
- A Web-based network monitoring tool
- Over 200 private peering relationships with presence in nine NAPS (Mae-East, Mae-West, Mae-Central, Paix, Paix-Vienna, Paix-Seattle, Ameritech, S.I.X., and O.I.X.)
- Cisco AS5300 and AS5800 remote access servers
- Analog modem access up to 56Kbps
- Digital ISDN-PRI access at 128Kbps
- RADIUS security
- All systems housed in a static-free, climate-controlled, fire-protected central office
- Redundant power with backup
- Constant network monitoring and support

This is your invitation to expand your remote service quickly, easily, and inexpensively. All you have to do is RSVP. Call Electric Lightwave today.

ABOUT US

Founded in 1990, Electric Lightwave, LLC (ELI) is one of the nation's leading Integrated Communications Provider of local telephone, data, network, and long distance services to small and medium enterprise businesses, Carriers, and the growing e-commerce market. As a full service provider in the West, the company offers local, long distance and high-speed broadband transport via an expanding fiber optic network that interconnects virtually every population center in the West.

Headquartered in Vancouver, Wash., the company is a wholly owned subsidiary of Citizens Communications (NYSE:CZN, CZNPr).

- [Company Description](#)
- [History](#)
- [Why Electric Lightwave?](#)
- [Executive Team](#)

Consistently rated one of the nation's top Internet backbone providers by *Boardwatch Magazine*, Electric Lightwave builds and operates all-digital, high-speed fiber optic networks for businesses and long distance carriers across the United States.

Service Areas

Electric Lightwave currently serves 99 municipalities. In the western United States, Electric Lightwave is a full service telecommunications provider, offering business customers a complete suite of integrated products and services, including local phone service, switched and dedicated long distance, private networks, advanced data and Internet access services. Nationwide, Electric Lightwave offers long distance, data, Internet access and broadband transport services.

High-speed voice, data, and video transmission services are provided over local and longhaul fiber optic networks and extended regional and national networks. Electric Lightwave's SONET monitoring and network management capabilities provide greater efficiency in addition to a common point of control and improved economies.

In its full service markets, Electric Lightwave bundles its services to provide the convenience of a single bill and one number to call for service. These full service markets include Portland, Ore.; Seattle, Wash.; Sacramento, Calif.; Phoenix, Ariz.; Salt Lake City, Utah; Boise, Idaho; and Las Vegas, Nev.

Internet Connectivity with Eschelon Goes Beyond Standard Dial-Up, DSL and T-1 Services.

Our services include e-mail, web and domain hosting and SMTP Mail Relay, as well as virus and Spam filtering options.

Eschelon can provide security and Virtual Private Network (VPN) solutions for maximum protection and flexibility.

DSL

Digital Subscriber Line service (DSL) is a technology that offers a dedicated, high-speed and secure connection to the Internet. DSL uses existing copper wire phone lines and DSL modems at each end of the line to transmit data at much greater speeds than traditional dial-up or ISDN connections.

[MORE ➔](#)

DEDICATED T-1

A Dedicated Internet T-1 Service is the ideal solution for customers requiring consistently reliable and secure bandwidth. Choose the speed that best fits your business - bandwidth options start at 768K and are available in 64K increments up to 1.5Mb. This dedicated solution is an "always-on" connection, and all of the bandwidth is dedicated solely to your network's Internet connection.

[MORE ➔](#)

DIAL-UP

Eschelon provides many advanced services and helpful tools for your dial-up access and e-mail needs.

» ABOUT FIBERTECH

A PARTNER YOU CAN BUILD WITH

There's a significant shortfall of last mile fiber optic connectivity in mid-size cities that's choking Internet traffic, limiting facilities-based competition and hampering economic development. Think of morning rush hour, with an expressway clearly in view, but no on-ramps. Think of racing in the Indy 500, on roller blades.

Fibertech is bridging this digital divide by engineering diverse route, "open-access" networks in metropolitan areas -- a key differentiator from typical infrastructure investments. This type of network connects Telco central offices, carrier hotels, data centers, and other traffic aggregation points, enabling numerous telecommunications and Internet Service Providers the ability to offer facilities-based services.

Direct end users with high bandwidth requirements can also take advantage of fiber connections. This type of application allows businesses to leverage the unlimited bandwidth and control of facilities from dark fiber to create and define services such as storage area networks, extending local area networks, business continuity and high-bandwidth file transfers.

So, for unprecedented cost savings or unmatched operating efficiencies, think Fibertech for your networking needs.

As the demand for Internet and associated telecommunications services grows at an exponential rate, enterprises are examining new access technologies that will enhance the basic value of their information technology investment.

One of the most cost effective ways to control your bandwidth needs while future-proofing your business is a dark fiber solution from Fibertech Networks. Dark fiber affords your company a long list of benefits, including:

- » Virtually unlimited bandwidth at a fixed cost. You get fiber optics to the doorstep to help you optimize the costs and control of your network
- » A flexible, competitive and customizable configuration to meet your unique bandwidth demands
- » The ability to utilize technological advances to better manage your business, without reliance on your incumbent carrier for adding services
- » The option of capitalizing your network as an asset
- » The comfort of knowing that we have partnered with leading equipment providers to assist you in building a complete, redundant and secured network

A dark fiber solution from Fibertech will help ensure that your business will grow along with your network and communications needs, not in spite of them.

To learn more about our dark fiber connections, please complete our [sales inquiry form](#) and a Fibertech representative will contact you shortly.

In today's capital-constrained telecom market, there's a premium on lowering costs and tempering risks. Yet carriers must balance these challenges against raised revenue targets, speed-to-market and increased facilities-based deployment.

That's where Fibertech comes in. Our dark fiber metro networks can provide you with a myriad of cost-cutting benefits including:

- » Virtually unlimited bandwidth at a fixed cost
- » A flexible, competitive and customizable network configuration and cost structure
- » The ability to utilize technological advances to better manage traffic demand
- » Access to metro networks that include connections to virtually all central offices, POPs and data centers, and that are a short distance from its major office buildings and business parks
- » The advantage of being facilities-based, which can improve both margins and enterprise value
- » Increased provisioning times resulting in faster revenue realization

Competitive carriers must continue to invest in their business in order to exceed future growth expectations. So, whether you're interested in entering a market as a facilities-based provider or simply looking to bolster your serviceable footprint, a Fibertech dark fiber network can be your differentiator.

To learn more about our dark fiber connections, please complete our [sales inquiry form](#) and a Fibertech representative will contact you shortly.

» OUR NETWORKS

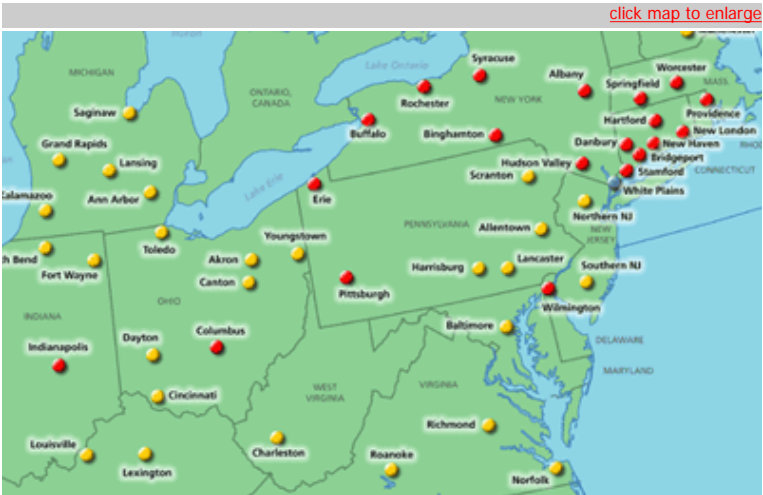

BRIDGING THE DIVIDE

The early reports of a bandwidth glut have been greatly exaggerated. In truth, bandwidth in most metropolitan areas – especially last mile connectivity to businesses in mid-tier cities – is actually critically scarce.

Fibertech has built extensive dark-fiber optic metro networks throughout tier II and III cities across the Eastern and Central U.S. Our networks are currently operational in Indianapolis; Syracuse, Albany, Binghamton, Buffalo and Rochester, NY; Pittsburgh; Hartford and New Haven, CT; Columbus, OH; Providence, RI; and Worcester and Springfield, MA.

Typically enjoying a first to market advantage in these underserved markets, Fibertech utilizes a ring-based architecture with an average length of 100 miles. These extensive networks connect high data aggregation points throughout a city's central business district and suburban areas, and on average serve 15 central offices and provide access to 164,000 business lines per market.

To view our network maps and a list of the metro areas we serve, click on [Current Markets](#) or [Future Markets](#) in the navigation menu to the left.

METRO NETWORKS YOU CAN BUILD ON

WE'RE MAKING
BIG THINGS
HAPPEN

AROUND
MID-SIZE
CITIES

METRO NETWORKS YOU CAN BUILD ON,

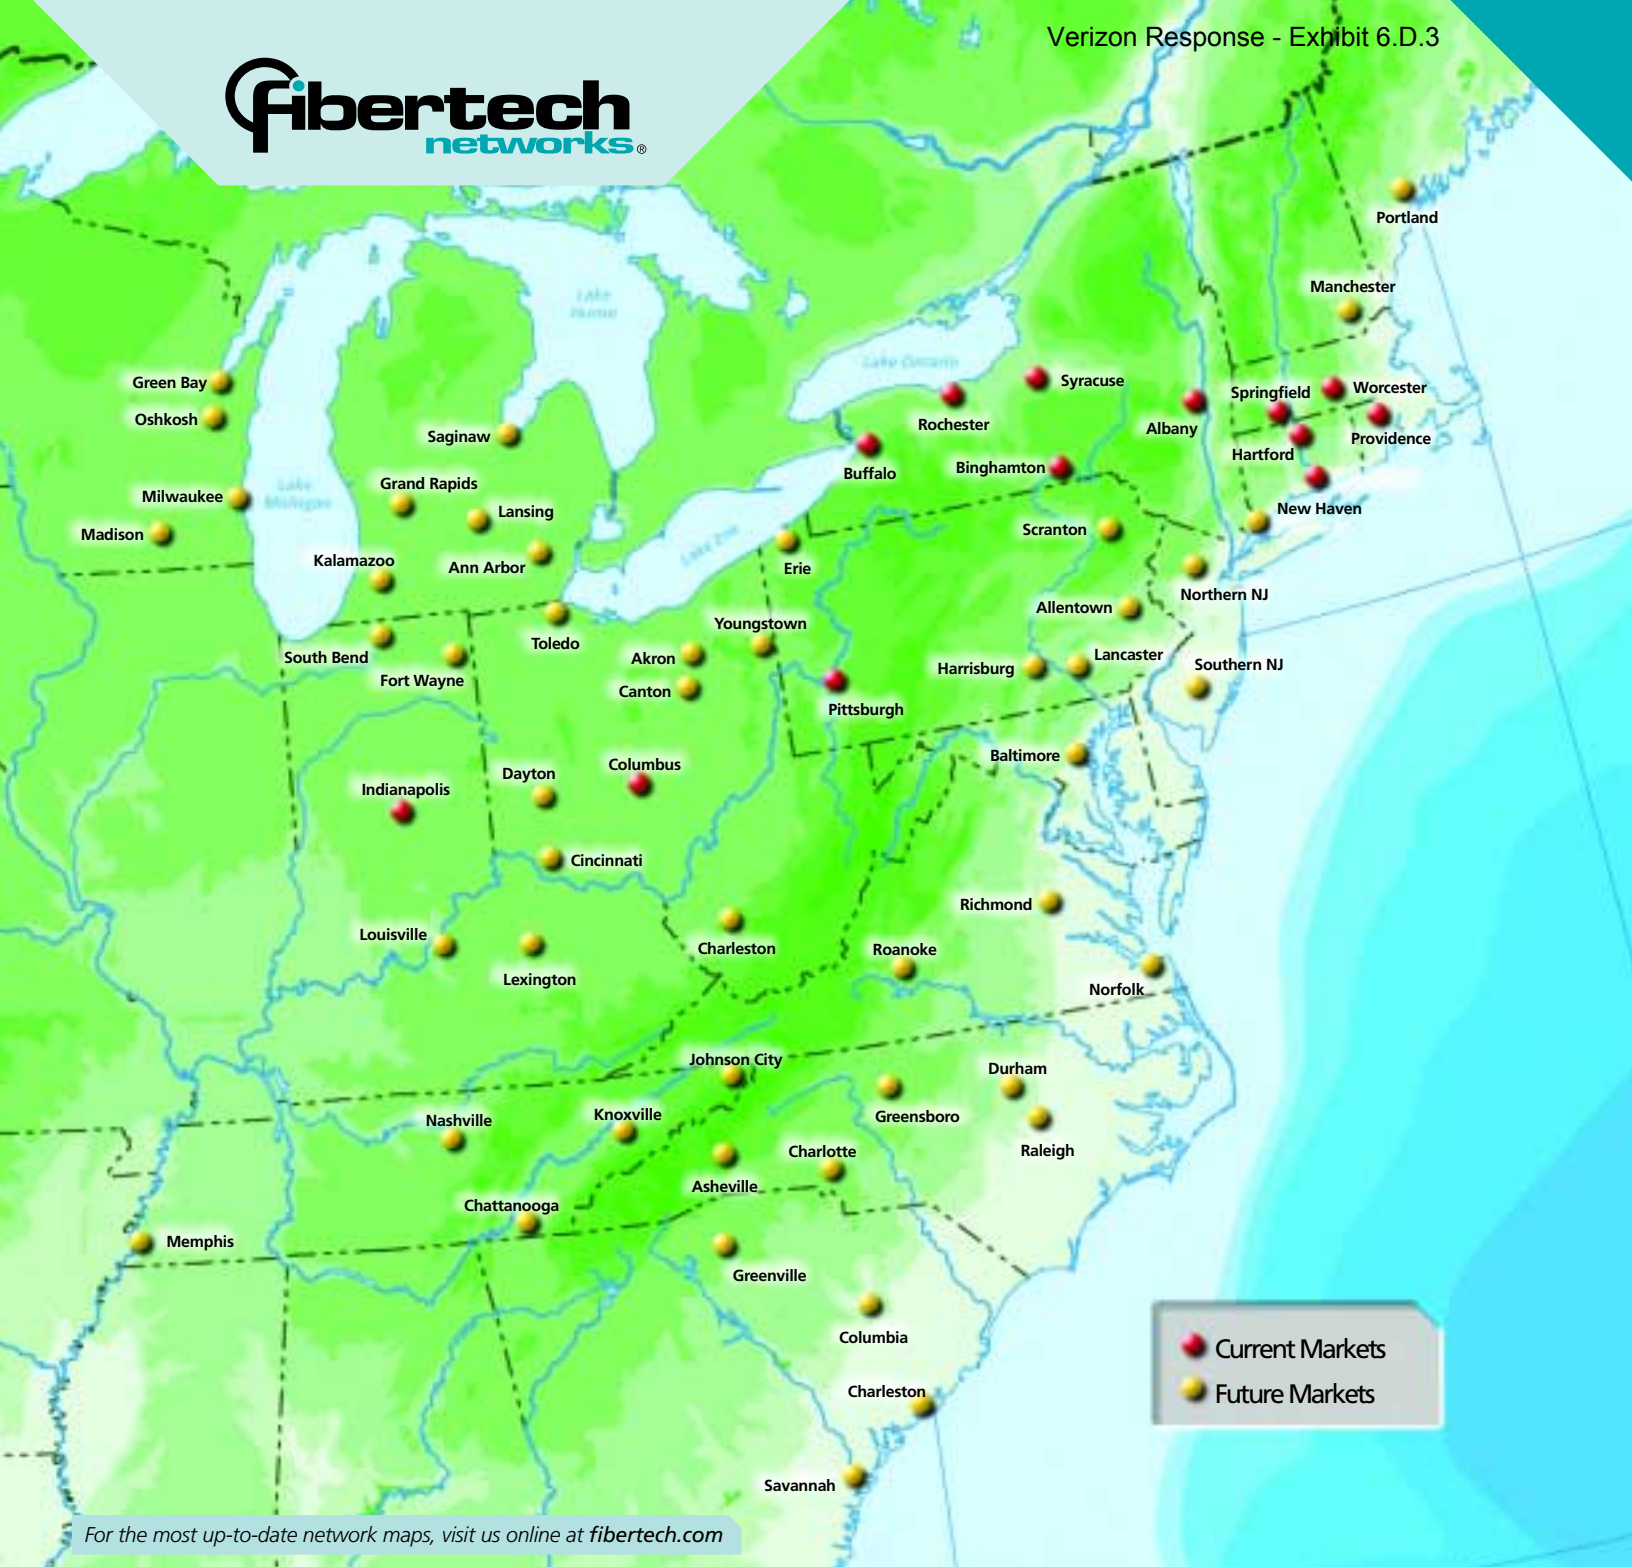

CITIES YOU CAN GROW IN

Every city may not be big enough to support an NFL team or a thriving theater district. But even smaller, mid-size cities still have a need for increased bandwidth and advanced telecommunications services. We're committed to helping satisfy and grow that demand, and to helping grow business opportunities for our partners. We're Fibertech Networks, and we're building, leasing and operating dark fiber networks in the cities where you'll find those big opportunities.

We've also built a company you can grow with for years to come. In a number of cities, we're already operating networks that are serving a wide range of customers. And, backed by extensive financial resources, we're expanding our footprint daily.

Plus, as the first competitive fiber network being built in most of the markets we serve, Fibertech lets you grow your business without subsidizing your competition.

**WE'RE WHERE
YOU NEED
TO BE**

You'll find Fibertech Networks in leading second and third-tier markets throughout the Northeast, Midwest and Mid-Atlantic states. And within each market, you'll find our networks connecting the locations you need. Central Business Districts are just the beginning. You'll also find us in the suburbs, connecting high-growth business parks and office buildings. All told, in an average market we're building and operating over 100 route miles connecting an average of 15 Central Offices and Carrier Hotels. Have a special location you need to connect? With our in-house design and construction capabilities, we'll make it happen.

WE'VE GOT THE NETWORK YOU NEED

■ Fibertech's extensive metro networks are the perfect foundation on which to build your infrastructure. We've designed our high-capacity, high-reliability networks to effectively meet the needs of a wide range of communications providers, including CLECs, IXC's, wireless carriers, ISPs, ICP's and next-generation carriers who want to leverage DSL and Gig-E technologies.

And with telecom technology changing at such a rapid pace, the flexibility of a dark fiber network offers you a number of advantages:

- ▶ Virtually unlimited bandwidth at a fixed cost
- ▶ The ability to completely control performance and costs
- ▶ A flexible, competitive and customizable configuration and cost structure
- ▶ The ability to utilize technological advances to better manage traffic demand

We've also designed our state-of-the-art networks to dependably handle the complete range of today's—and tomorrow's—broadband applications.

- ▶ Single-mode, non-zero dispersion shifted fiber
- ▶ Supports SONET, DWDM, ATM, Gig-E and video
- ▶ Diverse ring topology
- ▶ ARC fusion splicing

WE'LL HELP YOU BECOME MORE PROFITABLE, MORE QUICKLY

■ We know our success will grow out of your success. That's why, unlike the short-term leases you're used to getting from ILECs, Fibertech has designed long-term leases and IRUs that offer you substantially more financial flexibility. Our innovative agreements will help you capitalize your network and become EBITDA-positive more quickly.

And since you'll be leasing a dark fiber network, partnering with Fibertech also offers the advantages of becoming more facilities-based. The optimized cost and operational control of your network assets will improve both your margins and enterprise value.

WE'RE BUILDING OUR NETWORKS RIGHT

■ We knew only a construction company of exceptional experience and ability would be able to build the kind of state-of-the-art network we wanted. Fortunately, we didn't have to look very far. Over the last decade, Fibertech's construction division has built thousands of miles of aerial and underground networks for telecommunications' leading companies—expertise that's now going into every mile of our own networks. That expertise also allows us to better serve your needs for custom builds, like the laterals and spurs you need to directly connect with your customers.

METRO NETWORKS YOU CAN BUILD ON

overview

Focal offers a full suite of voice and data services to meet the needs of even the most communications-intensive customers. Coupled with our diverse, redundant network, Focal's products and services not only get the job done, they give you peace of mind.

Our voice products range from standard inbound/outbound calling to solutions for businesses with customers in remote locations. On the data side, we'll get you onto the Internet faster, and our dedicated Internet access helps you avoid the most congested spots on the Net. We can even give your employees a more cost-effective way to log onto your private network.

Check out some of the practical and creative ways we can make communicating easier.

access services

Focal understands no two businesses have the same needs, therefore we offer access services (T1 or PRI) to meet your specific business requirements. Whether voice or data, Focal's services utilize a diverse network, to ensure that you'll receive the highest rate of completed calls possible. Combining innovative thinking, comprehensive coverage and the most reliable services available, Focal provides the best choice for communication intensive businesses. Next to our employees, our network is our greatest asset.

What makes our products better for your business? Well, just take a look. Focal's network relies on a transport neutral design, allowing us to provision service both in our network and to the customer, using a variety of access providers. We connect to multiple tandems in all our service areas. And Focal has direct End Office connections to handle the busiest of customer traffic. What does all this mean to you? Sophistication. Reliability. Diversity. That's the Focal advantage. Add our excellent, award winning customer service, and you have access solutions without worry. So compare us with the other guys and then get the service you deserve. Any way you want to go, Focal is available to you 24/7 - 365 days a year.

long distance

From local to long distance and from inbound to outbound, Focal offers long distance and toll free services to meet your needs. Finding the best long distance phone service for your business situation doesn't have to be confusing and complicated. In fact, it's rather straightforward; your LD carrier must provide quality service at competitive rates.

Focal provides US-based companies with a variety of call plans based on where you are located. We offer the long distance plan designed specifically to match your business needs whether you call other Focal markets or anywhere else in the World. In addition, combining your long distance plan with other Focal services can help you simplify and save. The quality and customer service you've grown to expect from Focal's local telephone service is available for your long distance traffic as well.

For more information, contact your Focal/Broadwing representative or visit www.broadwing.com.

Focal Communications Acquisition Information:

On September 2, 2004, the parent company of Broadwing Communications, LLC, Corvis Corporation , announced the completion of the Focal Communications Corporation acquisition. [Learn more](#) about the details and new opportunities this move offers to our customers...

- [Focal Communications Acquisition Information](#)
- [Corvis Corporation](#)

Focal is a national communications service provider with a unique blend of stellar service and creative voice and data solutions for [enterprises, government entities, universities, carriers, and value-added resellers](#). We deliver premier service to our customers through:

- Dedicated, local sales and support
- Exceptional network diversity and reliability
- Innovative solutions packaged to meet customer needs

Focal teams are highly experienced in the communications industry, combining expertise, energy and a unique perspective to provide you with creative solutions to address your unique applications. Superior customer service has always been a top priority at Focal and is something that truly differentiates us from our competition. We deploy **local customer care teams** -- customer service representatives and sales engineers who are based close to the customers they serve. Our experienced customer service representatives are available to you 24/7 and are empowered to respond to your needs.

Focal's robust voice and data network is designed to handle the demands of communications-intensive customers. Diversity and redundancy take precedence in Focal's architecture and are incorporated throughout the network. We're deeply connected to the local telecommunications network, interconnecting with all tandem switches and up to 80% of the end offices in a given LATA. Our network configuration allows us to route our customers' calls via the most direct path, and provides multiple paths for call completion. Focal's network is provisioned over multiple carriers, where available, or Focal-owned fiber for unmatched diversity.

Focal can provide your business with a broad range of telecommunications solutions including local, long distance, toll free, international, dedicated Internet access, Integrated Voice and Data (IVAD), conference calling, and other products. Focal offers these services across the country in 23 of the top U.S. markets: Atlanta, Baltimore, Boston, Chicago, Cleveland, Connecticut, Dallas, Fort Worth, Detroit, Houston, Los Angeles, Miami, Minneapolis/St. Paul, New York, Northern New Jersey, Northern Virginia, Oakland, Orange County, CA, Philadelphia, San Francisco, San Jose, Seattle and Washington D.C. For a complete map of cities, see the [service areas page](#).

Give us a call today at 1-877-FOCAL-CC to find out more about how your company can take advantage of Focal's premier service, network reliability and innovative solutions to meet your needs.

Welcome to FPL FiberNet's Web Site

[Overview](#) | [FPL FiberNet is the leading carrier in the state of Florida](#)

Overview

Launched in early 2000, the FPL Group subsidiary acquired an existing 1,600-mile, inter-city fiber network from Florida Power & Light. In operation for 12 years, the inter-city network travels from Miami to

- Jacksonville on the east coast of Florida
- Lake City in North Florida and
- Tampa on the west coast.

**See Maps
for Locations**

FPL FiberNet provides metro access solutions to Florida's

- local and long distance telephone companies
- international cable carriers
- ISPs
- ASPs
- CLECs and
- ILECs.

FPL FiberNet has invested \$350 million to expand our fiber-optic network throughout Florida's metropolitan cities. The subsidiary also provides wholesale fiber services through partnerships and interconnections with multiple regional networks throughout the southeastern U.S.

FPL FiberNet is the leading carrier in the state of Florida

FPL FiberNet is connecting all of the state's

- major carrier hotels
- central offices
- international cable-heads and
- NAP.

WHAT IF you're looking to expand your network footprint out of region without additional capital expense? What if you could increase revenue by offering value-added services in new markets? What if you could eliminate idle bandwidth issues by purchasing based on customer demand? What if your customers are moving to IP solutions faster than you?

GLOBAL CROSSING CAN provide solutions to handle all of today's networking demands, and we have the converged voice, data, video, and collaboration applications for tomorrow. As an early adopter of IP services, including VoIP and IP VPN, Global Crossing is positioned to help you succeed at meeting the needs of your customers in the burgeoning IP marketplace. Solutions from Global Crossing enable you to offer consumers, businesses, and wholesale carriers around the world telecommunications services with the highest quality using the most reliable technology.

The competition is getting tough and you're facing growing threats on all fronts, with new competitors and competing technologies threatening your base. As you look to increase your customer's share of wallet, Global Crossing has solutions to help leverage your current infrastructure, while enabling you to offer flexible value-added solutions outside of your region.

Our global reach and extensive services portfolio offer our customers a powerful presence in the worldwide service provider marketplace. A winning combination of global scale, next-generation network services, and reliability enables our customers to go further, aim higher, and get to the future faster.

Global Crossing has Solutions for Long Distance Carriers

In the near-term, focusing on margin growth and investigating advanced solutions will be key to reaching budget and revenue plans. Global Crossing can help you obtain margin growth and reach your revenue goals with service offerings with the future in mind. Why build your own advanced worldwide infrastructure to serve next-generation services when you can utilize Global Crossing's? Take advantage of a global network providing scalable, secure transport, and advanced services including IP VPN and VoIP. Lower your overall capex requirements and eliminate the complexities of multiple networks and providers. Leverage our advanced infrastructure to meet your needs now and in the future.

Global Crossing has Solutions for Competitive Local Exchange Carriers

It is an exciting and demanding time for CLECs. Get a leg up on the competition by offering strategic services that expand your geographic footprint and portfolio of services. Global Crossing can help you with new and evolving IP-based technologies that are being wildly and widely adopted by your customers. Whether you are a CLEC that offers a broad portfolio of retail business-class services, or if you blend your retail portfolio with services to address service providers, Global Crossing has the voice and data services to help you address the needs of your customers.

Global Crossing has Solutions for Local Service Providers

ILECs, RBOCs, and PTTs around the world provide consumers, businesses, and wholesale carriers with the highest quality telecommunications

services using the most reliable technology. Until recently, owning the "last mile" provided a competitive edge untouchable by most competitive threats. Now more than ever, with services offered by ISPs, cable and satellite companies, there is increased pressure on you to expand service revenues, reduce operating costs, and stretch capex budgets -- the focus is "more results with less expense." Global Crossing can help you offer new services to your base of customers and economically expand your geographic footprint to gain revenues in new geographic areas.

WHAT IF you need to increase capacity for your mobile network to meet the needs of your burgeoning customer base? And what if you're considering moving to a VoIP backbone for your wireless voice traffic, as well as looking for a way to carry your on-net voice and data? How will your network handle the increased bandwidth requirements while supporting quality of service? Would you like to find a way to converge your mobile voice, video and data onto a single network infrastructure?

GLOBAL CROSSING CAN build your backbone, terminate your minutes and get you ready for the future -- VoIP, IP convergence, and video calls. You manage the spectrum and let Global Crossing do the rest. Global Crossing provides the critical backbone, data, video and voice services for hundreds of telecommunications providers worldwide, including some of the world's top mobile operators. Our network delivers converged voice, video and data solutions to tens of thousands of customers over the world's first purpose-built IP network, which consistently achieves 99.999% reliability.

Mobile Carrier Solutions**Global Voice Termination**

Global Crossing's backbone carries 6 billion minutes each month, and the Global Voice Termination network handles the bulk of that traffic. You can hand off your mobile-originated minutes with a Global Voice Termination handoff today, and move to VoIP if and when you decide. In either case, you will get the highest quality termination to domestic and global destinations.

VoIP Solutions

With nearly five years of experience in VoIP deployment, Global Crossing offers carrier-grade VoIP transport and termination, now carrying more than 2 billion VoIP minutes per month. Today we're helping carriers transition to the converged communications services of tomorrow, eliminating the need for separate voice and data networks and enabling efficient infrastructure consolidation and adaptable, cost-effective communications solutions.

IP Solutions

We know IP. Global Crossing's extensive experience in IP Transit -- from Internet browsing to content delivery to Internet access -- successfully enables the wireless portfolio. Global Crossing IP VPN Service? provides a highly secure, flexible, and scalable means to building perfect VoIP backbones that integrate voice, Internet access and even IP Video - all over a single connection.

Capacity Services

In addition to IP-based applications, the Global Crossing network offers a full suite of traditional capacity services, including ATM, Frame Relay, Private Line, and Wavelengths, all on a global fiber network owned and maintained by Global Crossing -- reaching more than 300 cities in over 30 countries on 5 continents.

The Wireless Services Exchange

The Wireless Services Exchange leverages Global Crossing's global voice

Resellers: Innovative Solutions. Network Quality. Reach. Experience. One Provider

WHAT IF you are a switchless Reseller selling voice and data, or a facilities-based Reseller looking to expand your geographic footprint? What if you're looking to reduce expenses and increase process efficiency? What if you're looking to standardize your service portfolio and consolidate vendors to achieve maximum efficiency?

GLOBAL CROSSING CAN help you profitably build and differentiate your business by providing you with services and promotions that are tailored to the needs of your business and your customers, and with tools that maximize efficiency. Global Crossing has partnered with Resellers since the mid-90s, and understands that differentiation, whether it's through customer service, technical support, or flexibility, is the cornerstone to success in this highly competitive marketplace.

uCommand®, our web-based interface, is all about process efficiency. With uCommand you can provision and maintain your entire suite of products, account by account. With uCommand you can price local loops, order services, analyze trunk group utilization, monitor usage for IP Transit, IP VPN, Frame Relay, ATM, and review call detail records for voice calls, plus create and track progress of service tickets. In addition, uCommand provides a user-friendly interface to online support materials and service documentation.

Global Crossing can help you reduce the number of vendors needed to support current and future service offerings with our global suite of voice, data, and collaboration services available in over 500 cities in 50 countries, all backed by one customer account management team, one service delivery team, one global network maintenance team, and one invoice.

WHAT IF you're an ISP, ESP or cable operator who wants to increase service revenues and reduce customer churn by bundling new offerings with existing services? What if you're looking for a reliable, scalable, cost-effective way to send your customers voice and data around the world or across the street? What if your service provider treated you like a partner, not only addressing your needs today, but also helping you to identify and deliver the solutions you want to provide tomorrow?

GLOBAL CROSSING CAN provide ISPs, ESPs or cable operators around the globe a world-class platform to support the applications that enable a rich user experience, whether business-to-business or consumer applications. Global Crossing's IP-based network offers a suite of services designed to optimize data, video, collaboration, voice-over-IP applications today or integrate traditional services, such as TDM voice, into a next-generation platform.

With Global Crossing, you can:

- **Establish a clear VoIP migration plan** -- move from existing services, such as TDM voice, to voice-over-IP at a pace that is right for your business and your customers on an integrated network performing at 99.999 percent availability, carrying over 2 billion VoIP minutes per month to places around the globe.
- **Reach customers worldwide** -- Global Crossing's MPLS-based Tier 1 IP Network fiber optic backbone network delivers service to 500 major cities in over 50 countries on six continents. Global Crossing peers both globally and regionally ensuring the highest quality possible for your worldwide traffic, and also for your regional demands.
- **Deliver IP on demand** -- our non-oversubscribed network offers increased scalability and "load balancing" of traffic, as well as premium QoS and service level agreements to support your data, voice and video applications.
- **Monitor and manage your services on line** -- as an XSP or cable company, utilize our uCommand® online account management portal, which enables you to easily manage your services and network via real-time access to our service delivery and customer assurance platforms.

Solutions for Internet Service Providers (ISPs)

Streamlining costs, finding new revenue opportunities and managing explosive broadband Internet subscriber growth are the key challenges facing ISPs. Global Crossing can provide you a high-speed on-ramp to the Internet. As a Tier 1 global IP provider with a single AS Number worldwide and robust peering relationships with all major Tier 1 Internet Networks, Global Crossing's IP Services enable you to connect your customers with the content or subscribers they desire. Additionally, Global Crossing Bandwidth Solutions provide the tools for building your own network, or simply adding extensions to an existing one.

As ISPs explore adding voice services to their service offerings, Global Crossing is the ideal service provider. With significant voice expertise, a robust product portfolio and a commitment to service excellence, Global Crossing's the right partner for ISPs.

ISPs:

[Limelight Networks Expands its High-Performance Media and Entertainment Digital Delivery Network with Global Crossing](#)

ESPs:

[USA Datanet Turns to Global Crossing for Industry-Leading Voice Over Internet Protocol \(VoIP\) Service](#)

[Global Crossing and VoEx Bring VoIP Solutions to the Enterprise Market](#)

Global Crossing Recieves #1 Ranking in Atlantic-ACM's 2004 Wholesale Carrier Report Card

Solutions for Enhanced Service Providers (ESPs)

As Enhanced Service Providers enter the telephony market, finding a service provider that has a viable VoIP product offering now and the commitment to stay in the game for the long haul can be daunting. In 2003, with the launch of Global Crossing Wholesale VoIP Services, we demonstrated that VoIP is very real and very much how we will do business in the future.

Global Crossing is quickly evolving into the Carrier of choice for Enhanced Service Providers. Our VoIP Services portfolio is designed to support the highest levels of quality and enable future flexibility, such as supporting multiple CODECS, access options, signaling protocols and new voice offerings. Our commitment to VoIP technology is reflected in our numbers: we currently carry over 2 billion VoIP minutes per month or 30 percent of our total voice traffic and are on target to carry 50 percent by year-end 2004 and 95 percent in 2007.

Our vast experience in traditional TDM voice services and our leading position in VoIP will give you an advantage over your competitors. Let's explore together how Global Crossing can help you execute on your business plans to quickly bring solutions to your customers.

Solutions for Cable Operators

As Cable providers bundle new services, such as voice, video and data to increase top-line revenue and reduce customer churn, they are faced with multiple decisions on when, how and with whom to partner to provide these solutions.

When it comes to cost-effective, quality, wholesale voice products, we've got it covered from local origination service to domestic and international termination -- Global Crossing can provide the services you need, when you need them. With our commitment to deliver all voice applications, regardless of technology platform, VoIP or TDM, we can provide a customized migration path that enables you to send just TDM, TDM and VoIP, or all VoIP traffic to us.

As your broadband Internet subscriber base continues to grow, Global Crossing's worldwide IP network will provide the reliability and scalability to grow with you. As a Tier 1 IP provider, we have excellent peering relationships and can quickly route traffic to any other Tier 1 provider. We have an IP network that's second to none; with our single AS Number and MPLS-based network, it's not surprising we consistently perform at or above 99.999 percent.

Global Crossing is the ideal service provider to bring the "triple play" bundle of voice, video and data to your customers. With data and voice expertise, a robust product portfolio and a commitment to service excellence, Global Crossing is the right choice for Cable providers.

ONE NETWORK. INFINITE POSSIBILITIES.**

Whether your needs encompass broadband, voice, data or multimedia communications -- including readily accessible audio-, video- or Web-conferencing -- Global Crossing can provide you the telecommunication solution to meet your needs. Our integrated, global IP-based network was designed for the convergence of voice, video and data, and delivers services to the top commercial centers around the planet.

Our customers include more than 40 percent of the Fortune 500, as well as 700 carriers, mobile operators and ISPs. Global Crossing provides them -- and can provide you -- a fully integrated and interoperable suite of IP and legacy services including IP VPN Service, VoIP Service and IP Video. And all of this is over our highly secure IP network, which is managed and operated end-to-end. It is a network that will not be replicated in the near future, if ever.

Global Crossing's customer support model matches the network footprint, delivering a consistent customer experience worldwide.

One Planet. One Network. Infinite Possibilities. It's more than just a slogan, it's the definition of a worldwide IP network for today's global businesses. It's the definition of Global Crossing.

CORPORATE SERVICES

Our dedication to our customers makes us the best choice for business networks that have between 50 to 5,000 desktops. And we're also the answer for larger corporations with high bandwidth needs.

When you choose ICG, you choose a reliable set of services with leading network performance. Do you rely on an Internet connection for e-mail, file transfer, a corporate Intranet, e-commerce, or video streaming? Do you call your reps across town or keep in touch with multiple branch offices with sophisticated data, Internet, and voice features? ICG Corporate Services offer businesses flexible solutions to help you meet the demands of your growing operation.

While ICG offers very competitive pricing, we know that that's not enough. Our customers get extensive coverage and the very best customer service, too.

ICG's reliable network provides a solid platform to build upon for small to medium-sized businesses.

WHOLESALE SERVICES

ISP Services

Our ISP services give you everything you need to seamlessly expand your coverage and serve your customers. Our robust network has an extensive metro footprint specifically built for businesses. Our state-of-the-art equipment, exceptional coverage, and technical expertise makes us the choice for ISPs that need a cost-effective way to manage their markets and expand into new ones.

ICG is also a solid company that thoroughly supports its ISP offerings. So you can always expect prompt and courteous customer service.

Carrier Services

However, we haven't forgotten our roots offering carriers Local Private Line, and Intercity Private Line services that guarantee them the reliable bandwidth they need in Colorado, Ohio, and various locations throughout the Southeastern U.S.

ICG COMMUNICATIONS OVERVIEW

ICG is an integrated metropolitan and regional fiber infrastructure company that provides voice, data and internet communications services.

ICG is a focused telecom services provider in core markets...

- ICG is focused on fulfilling customer's telecom needs in core ICG markets (i.e., markets where ICG has a dense, competitive metro fiber presence)
 - Continue to work with our customers and understand their needs
 - We will surpass customer expectations and deliver competitive telecom solutions in key markets
- In core markets, ICG will concentrate on three distinct customer segments
 - Carriers
 - CO to CO connectivity
 - Carrier's high bandwidth customer building to carrier POP connectivity
 - ICG is focused on direct wholesale sales to carriers
 - High bandwidth (DS-3 to OC-n) access customers
 - Customer building to CO or IXC/ISP carrier POP
 - SMB users of data/voice services
 - VoicePipe™ - ICG's feature rich converged telephony/data solution
 - iConverge™ - ICG's integrated access solution
 - PRI, DIA and other 'standard' telco offerings

ICG is focused on Surpassing Customer Expectations

- Recognition from several top carriers as "The most

**FOCUSING ON
CONTINUOUS
IMPROVEMENT, RELIABILITY
CUSTOMER SATISFACTION
& PROFITABLE GROWTH.**

ICG's Core Focus - *Delivering Value*

"We aspire to provide superior telecommunications services in specific regions of the country.

We will use our deep fiber facilities to provide carriers, service providers, governmental entities, and large corporations with bandwidth.

We will use our VoIP capabilities to provide small and medium-sized businesses with a gradual transition from traditional phone service to IP-based communications.

We will provide excellent service to our customers."

--Dan Caruso, President and CEO-

Currently ICG ...

- Provider of access (DS-1 - OC-192)

- responsive CLEC”
- Meeting Firm Order Commitments 90%+ of the time
- Expeditious turn-up of on-net services
 - DS1 < 10 biz days, DS3 < 15 biz days, OCn < 45 biz days
- Uptime in excess of 99.999%
- MTTR < 2.5 hours
- 24/7 Network Operations Center
- Pricing requests answered expeditiously
 - 48 hours for standard products
 - 48 hours for budgetary capital expenditure quotes
 - 120 hours for firm capital expenditure quotes

ICG vs. Competitors

- ICG provides a level of service that customers do not receive from incumbent telcos or larger CLECs
 - Rapid quote response timeframe
 - Focused, dedicated customer service teams
 - Rapid response to customer questions, concerns, needs
 - Customer/tailored telecom solutions
- ICG provides pricing that is usually lower than incumbent telco pricing
 - ICG’s dense metro fiber network allows ICG to put more service ‘on-net’; this mean lower cost for ICG and a lower price for most customers
 - Unlike most other CLECs, ICG does not have to cover large debt payments; this allows ICG to competitively price services to most customers
- CG providers services that are not offered by incumbent telcos
 - ICG has unique converged voice/data offerings that other CLECs and ILECs do not offer
 - ICG’s market leading VoicePipe product offers customers a feature-rich, cost-effective way to handle voice communications
- ICG services ride the ICG network
 - One company troubleshoots all network problems; no finger pointing or lengthy repair times
 - Eliminates multiple service calls to install

International Rates

With the IDT Long Distance Business Plan, a personal account representative is always available to give you the attention, answers, and advice you need about saving money on long distance. And your personal account representative will show you that IDT can save you as much as 50% on your monthly long distance bill*. That's because we provide:

(Click on links for a brief explanation)

- Long distance at 5¢ a minute or less for calls state-to-state and Canada.
- Savings of up to 60%* over AT&T's international rates with IDT's [WorldSaver International Plan](#) and the monthly fee is waived.
- Highly competitive in-state long distance and regional toll rates.
- No fee calling cards so your staff can always stay in touch inexpensively.
- Flexible 800 numbers so your customers can always reach you.
- Billing in 6-second increments (not rounded up to the nearest minute) with no per-call minimums.
- As many lines as you need, in as many locations as you have.

How do I make a call?

- Dial toll-free 1-800-710-0336 or the appropriate access number, wait for greeting.
- At prompt, enter your 10-digit account number and then your 4-digit PIN. Our system will read back the balance remaining on your card.
- At next prompt, for Domestic calls and calls to Canada, dial 1 + Area Code + Local Number. International calls, dial 011 + Country Code + City Code + Local Number.
- To make another call, simply press the pound key (#) three times and dial as described in Step 3.

How do I sign up?

Fill out our [Contact Us Form](#) and an IDT sales representative will contact you within two business hours, or email IDT Corporate Services at corporatecardservices@corp.idt.net. You may also call directly to 1-973-438-3577.

What are the calling rates for the card?

The rate from the U.S. to the U.S. is 7¢ per minute. International rates are also as low as 7¢ per minute.

What are the extra costs that might be incurred?

There is a 90¢ surcharge when calling from U.S. payphones and some U.S. hotel phones. If you press the pound key [#] three times you can make another call and will not be charged the surcharge again. The United Kingdom payphone surcharge is 20¢. The Spain payphone surcharge is 20¢. The Germany payphone surcharge is 30¢. The Netherlands payphone surcharge is 30¢.

Can I make consecutive calls?

To make another call, you don't have to hang up and enter your card information again. Just press the pound key [#] three times and wait for voice instructions to complete your next call. Please note: a touch-tone telephone is required to use this service.

Any other short cuts?

You can punch in all 14-digits of your account number at one time. You do not have to wait to be asked for your PIN.

Registered Number

For ease and convenience, by setting a registered number (your cell phone number, your home phone number, or any other number you frequently call from) you will be allowed to place calls from your registered number without being prompted to enter your account code and PIN each time. This feature is only available from U.S. phones.

How do I get my call records?

Simply log-in to the "[My Account](#)" center to access your billing and calling history.

When will I receive a physical card?

A fulfillment package will be mailed to you within 10 days. The fulfillment package has your physical card with your name and account number printed on it and a global access number list. However, you may start using your account immediately after you receive the account number and PIN at the completion of sign up process.

Welcome to the IDT Wholesale Carrier Program. IDT is a true carrier's carrier, providing wholesale minutes to the world's most successful phone companies.

Program Highlights

Contact Us

Since Carrier Services entered their market in 1996, IDT has become known worldwide as the most aggressive, flexible, quality-driven company in the wholesale arena.

Carrier Services, the backbone of IDT's telecom business, routes millions of minutes of international telecommunications traffic daily from other [carriers](#) through our own switching and network infrastructure. These other carriers are able to take advantage of IDT's discounted rates, bargaining power, and commitment levels, thanks to our existing and expanding telecom traffic in key global markets, and to our competitively priced services.

What truly differentiates us from other carriers, and makes IDT Carrier the best, most powerful choice in the industry, is that we manufacture our own minutes. Unlike the vast majority of competing companies, we don't simply re-sell someone else's minutes to yet another party - we also sell our own. And we are thus able to offer truly aggressive pricing, owing to our extensive debit expertise, worldwide carrier relationships, and financial stability.

With a geographically diverse customer base of over hundreds of carrier relationships, we have reciprocal routing agreements with the telecommunications industry's top-tier carriers. In fact, 19 of the top 25 global carriers are IDT customers, and our other customers include PTTs, U.S. RBOCs, and multinational and competitive carriers. We focus on routing telecom traffic to niche markets such as South America, the Caribbean, and Asia, and have terminating agreements worldwide. We're also a fully licensed operator in many European countries, where we have established a facilities-based network. IDT's goal as a carrier's carrier is to offer the most aggressive pricing for other telephone companies, while allowing them to focus their efforts and resources on maintaining and growing their core businesses in their respective countries.

About Us

[home](#) > [about us](#)

A Focus on Local Service and Satisfaction

Integra Telecom is a facilities-based, integrated communications provider (ICP), primarily focused on serving small and midsize companies located in the business centers of Minnesota, North Dakota, Oregon, Utah, and Washington.

In contrast with the options offered by traditional carriers, Integra Telecom differentiates itself by staffing locally based customer care, technical, and account management professionals whose goal is to provide high-level, personalized client service and satisfaction. We believe in providing flexibility in communications, and understand the "one size fits all" approach does not always match your needs.

In contrast to companies that rebrand and resell services from RBOC (Regional Bell Operating Companies) carriers, Integra Telecom owns and operates its own network offering local dial tone, domestic and international long distance, high-speed Internet and data services (including digital subscriber line or DSL), voice messaging, and numerous ancillary services designed to support the needs of small and midsize companies.

Network and Facilities

Integra Telecom is a facilities-based service provider, operating its network from various switching centers throughout its operating regions. Integra implements only carrier-class equipment in its network operations. Integra's network equipment vendors include Lucent Technologies, Cisco Systems, Cerent, Paradyne Corporation, Sun Microsystems, Carrier Access Corporation, and ADC/Kentrox, to name but a few.

Integra's network operations are monitored 24 hours per day. Backup power sources, including battery and generator systems, keep Integra systems operational in the case of power outages. Integra's voice and data networks are connected to and from the public switched telephone network (PSTN) and the Internet via ATM over multiple fiber-optic SONET rings, ensuring failsafe operation in the event of carrier service interruption. Integra operates Lucent 5ESS® switching equipment to support all local and long distance voice services. Integra's product sets include Lucent's enhanced CLASS services like call waiting, caller ID, and more. Current and future investments in network switching equipment will emphasize a transition to next-generation, packet-switched network technologies. These build-outs provide the flexibility to handle any form of voice or data over an optimized network at lower cost.

With a customer base increasingly dependent on connections to the Internet, Integra Telecom has engineered its data network with virtually unlimited scalability, featuring several multi-megabit connections to Tier 1 Internet providers in each market. Integra's fiber-optic backbone feeds are designed for high burst rates and monitored usage for optimal bandwidth availability.

CARRIER

The obvious solution for reliability

Interstate FiberNetSM, Inc (IFN), an ITC^DeltaCom company, is known as the dominant carrier in the southern United States. With an impeccable reputation for on-time delivery, cost-effective reliability, and state-of-the-art technology integration, we offer comprehensive carrier services to inter-exchange carriers, CLECs, LECs, ILECs, ISPs, and wireless carriers, including:

- [Broadband Services](#)
- [Metro Network Services](#)
- [PRI Services](#)
- [Operator Services and Directory Assistance Services](#)
- [Data Services, ATM, and Frame](#)
- Dark Fiber

Our carrier services portfolio incorporates a variety of technologies including local number portability (LNP) for local service using existing numbers and PRI services for ISPs. We own and operate 24 x 7 x 365 call centers featuring comprehensive operator services and national [directory assistance](#). We also provide carriers with access to cost-effective DS1, DS3, and OC-n bandwidth capacities.

IFN has the largest [network](#) in the southern United States. Our network features Cisco GSR routers and fiber optic infrastructure that covers 14 states. With 236 POPs and unsurpassed network density, we provide reliable, high-speed access and connectivity for your customers. Multiple transit peering agreements with Tier1 providers allow us to deliver a redundant IP path with just a single connection to you, our customer. We use border gateway protocol (BGP) to establish efficient, loop-free routes with our Tier1 providers.

Our redundant network operations centers (NOCs) maintain the integrity of our network, 24 x 7 x 365.

ITC^DeltaCom has an exceptional reputation for reliability and deliverability. Please view our [Fiber Optic](#), [IP Backbone](#), [PRI](#), and [Frame Relay](#) maps for a closer look at our network.

For additional information, please contact Interstate FiberNet at **706.385.8500**.

COMPANY INFORMATION

ITC^DeltaCom began as Interstate Telephone Company (ITC) more than 100 years ago. Since then, we have achieved numerous [milestones](#) and earned a position as one of the largest telecommunications companies in the southern United States. Our [mission](#) is the same today as when we first opened our doors - to be the premier provider of full-service, integrated telecommunications and technology solutions to customers in the southern United States.

ITC^DeltaCom resolves the telecommunications challenges that can impede the success of your business. Our 14 state synchronous optical network (SONET), along with our fully integrated telecommunications systems and services, supplies the network capability to provide reliable and consistent uptime for your [voice](#) and [data](#) communications. We believe so strongly in our product and service solutions that we offer you [Our Guarantee](#). A guarantee might be a risk for some companies, but not for ITC^DeltaCom.

In October, 2003, ITC^DeltaCom merged with BTI Telecom Corp. (BTI). ITC^DeltaCom and BTI share common operating philosophies including commitments to innovation and quality customer service. This merger brings together a wide range of products, expertise and resource, solidifying the combined company's leadership position in the regional telecommunications industry. BTI has a rich history in serving business customers dating back to 1983. Together, the combined company is the strongest, best-positioned competitive telecommunications provider in its region.

At ITC^DeltaCom, we know telecom and understand technology. We specialize in helping our customers meet and exceed their telecommunications and technology needs. We do this by providing our customers with the ability to choose the most economical package to fit their company's needs. We serve a wide variety of customers - medium-to-large enterprises, small businesses and consumers - and focus our efforts on designing packages to meet our customers' needs.

We now have 40 offices throughout the southern United States. As we grow, we continue to combine emerging technologies with our extensive knowledge of the industry to provide voice and data telecommunications products and services.

Business

ITC^DeltaCom Business Services include a full range of [voice](#), [data](#) and [Internet](#) solutions, as well as [Equipment and Systems](#) for companies of all sizes. Through our [e^deltacom](#) business, we offer customers a suite of managed services including Storage, Disaster Recovery and Managed Security, as well as [collocation](#) and Web [hosting](#). From medium-to-large [Enterprise](#) customers to small businesses/home offices, we have the bundled offerings to meet all your telecommunications and technology needs.

About KMC

About KMC

KMC Telecom is a nationwide provider of next-generation telecommunications infrastructure and services at the network edge.

[KMC Corporate Profile](#)[KMC Senior Management Team](#)[KMC Corporate Fact Sheet](#)[KMC Mission Statement](#)[KMC's Culture: Ethics and Principles](#)

With more than \$1.4 billion in deployed network assets — which include SONET fiber networks and switch platforms — KMC is the largest privately held nationwide telecommunications company in the U.S. Through our two operating divisions, we serve the needs of two distinct markets:

How Can KMC Help You?

[KMC Service Area Maps](#)[Advanced Communications Services](#)[Nationwide Data Services](#)[KMC Home](#)

The Nationwide Data Services Division provides a range of outsourcing and operations services for wireless carriers, interexchange carriers (IXCs), internet service providers (ISPs), cable MSOs, utilities and power companies looking to enhance their service offerings or expand their geographic reach. They call on KMC to deploy, operate, and maintain various service delivery platforms and to provide infrastructure or services on a 'wholesale' basis. KMC Telecom also provides access to financing for large-scale infrastructure development.

The Advanced Communications Services Division supports individual businesses, institutions, and government organizations with advanced Voice, Data, and Internet services in 35 cities across the U.S. ([click to view map of KMC service areas](#)). Through KMC's specially designed SONET fiber network, KMC delivers the type of sophisticated and reliable services usually available only in larger cities, with a strong commitment to responsive, localized customer care.

These two divisions generated more than \$500 million in revenue in 2002.

KMC Telecom was founded in 1995, and is headquartered in Bedminster, New Jersey, with operations centers in Georgia and Alabama, and network central office facilities in 35 metropolitan areas.
