

## **Special Coordination Procedure for the Use of Frequencies in the Bands 806-821 MHz and 851-866 MHz for Land Mobile Services**

Recognizing that the priority use of frequencies by the United States of America and Canada remains pursuant to Section 3 of the *Arrangement Concerning the Use of the Band 806-890 MHz Along the Canada-United States Border*<sup>1</sup>, as amended<sup>2</sup>, between the Federal Communications Commission (FCC) and Industry Canada<sup>3</sup> hereafter referred to as the Agencies;

Recognizing further that administrations must maintain the flexibility to assign frequencies from their respective frequency blocks where they enjoy priority usage, using their chosen method of authorization;

Recognizing that there may be licensees/operators other than Nextel Communications Inc. in the U.S. or TELE-MOBILE COMPANY (formerly Clearnet Inc.) in Canada on frequencies identified in Annex A;

Recognizing that the use of frequencies identified in Annex A may be different beyond 100 km of the border than that within this border zone;

Noting that business arrangements may exist between Canadian and U.S. system operators, in this case TELE-MOBILE COMPANY and Nextel Communications Inc., which provide for spectrum-efficient, seamless frequency re-use plans that extend across the Canada/U.S.A. border and facilitate roaming;

It is AGREED that:

Industry Canada and the FCC may authorize these system operators to use specific frequencies, as set forth in Annex A (consisting of five parts) and incorporated herein by reference, within 100 km of the United States - Canada border that exceed the Power Flux Density limits specified in the Arrangement and are in the other countries= frequency block provided that the following conditions are placed on such authorizations:

- the system operators must file with their respective Agency a copy of the business arrangement listing the frequencies they would be sharing and in which geographical areas;
- agreement will be reached between the Canadian and U.S. licensees for each proposed station within the relevant geographical service area before it is placed in operation;

---

<sup>1</sup> Arrangement between the Department of Communications of Canada and the Federal Communications Commission of the United States concerning the use of the band 806-890 MHz along the Canada-United States border, dated April 7, 1982.

<sup>2</sup> See exchange of letters between the FCC and Industry Canada dated December 10, 1994.

<sup>3</sup> Formerly the Department of Communications.

- in the event that the operations provided for herein cause harmful interference to primary operations in either country, the system operators shall take immediate action to mitigate the situation. Should resolution of the interference situation not be found, the interfering station will be required to cease operation within 10 calendar days except, in the case where public safety licensees are affected, operations must cease immediately upon being advised;
- no service may be offered by the Canadian licensee within the U.S. and, no service may be offered by the U.S. licensee within Canada; and,
- any changes to the notified business arrangement will require review by the Agencies.

The authorizing Agency shall send a notification to the other Agency for each frequency assigned under the terms of this procedure, thus ensuring timely identification and resolution of harmful interference situations, should they arise.

In the event that any of the authorized frequencies listed in Annex A are affected by subsequent licensing action by either Agency, operations on these affected frequencies in the other country will cease within three months from the date of notification.

For any reason whatsoever, this procedure may be subject to unconditional withdrawal by either Agency with three months written notice.

This procedure is accepted as a revised understanding between the FCC and Industry Canada and replaces the Special Coordination Procedure previously issued to Nextel Communications Inc. and Clearnet Inc., originally signed January 9, 1997 and revised on May 14, 1998. This newly revised procedure will come into effect on the date of signature by representatives of both Agencies.
