Ocean Wind Power Maps Reveal Possible Wind Energy Sources

Efforts to harness the energy potential of Earth's **ocean** winds could soon gain an important new tool: global satellite maps from NASA. Scientists have been creating maps using nearly a decade of data from NASA's QuikSCAT satellite that reveal **ocean** areas where winds could produce wind energy. The new maps have many potential uses including planning the location of offshore wind farms to convert wind energy into electric energy.

Shells Form Unique Climate Archive On The Ocean Floor

Most people who find a seashell during their summer holiday on the coast will probably not be aware that they have found a unique record of the climate. For climate researchers, however, these hard calcium shells provide a profound insight into the history of our earth and especially into the climate of the past. Researchers are currently able to reconstruct the climatic history of
