Technical Narrative

The technical exhibit of which this narrative is part has been prepared on behalf Way Broadcasting Licensee, LLC, licensee of AM broadcast station KATD at Pittsburg, California. KATD is licensed for full time operation on 990 kilohertz with daytime and nighttime power of 5.0 kilowatts, operating with different directional antenna patterns during daytime and nighttime hours. KATD has an application pending with the Commission requesting a change in transmitter location and increase in daytime power to 10 kW, File No. BP-20010201AEJ. By means of this present application, KATD supplies information requested in a deficiency letter issued by the Commission dated November 13, 2003.

With respect to the contingent application of KIQI, and in accordance with the requirements of 47 CFR

73.3517(c) and as outlined in the Commission letter, the following information is provided.

The currently licensed operations of KATD and KIQI violate the provisions of 47 CFR 73.37 as the 5 mV/m contour of each station overlaps the 5 mV/m contour of the other both daytime and nighttime. This contour overlap prevents both stations from achieving any facility improvement. Grant of the KATD application frees both stations of this allocation impediment and permits an increase in power and coverage for both stations.

The KATD daytime proposal provides service to a land area of 64,748 square kilometers while the licensed daytime operation covers 55,004 square kilometers, an 18 percent increase. During nighttime hours, the coverage increases from 6,337 square kilometers for the licensed operation to 9,507 square kilometers for the proposed operation, a gain of 50 percent.

The proposed operation of KATD will continue to provide a premium principal community signal to Pittsburg as required by the rules. In any gain or loss coverage area, there are five or more other aural services available.

Currently KATD operates with different directional antenna patterns during daytime and nighttime hours. During daytime hours, the major lobe is directed to the east, while during nighttime hours the major lobe is directed to the west. The existing operation therefore has substantially different audience during daytime and nighttime hours, which is a severe operational and programming disadvantage. Grant of the KATD proposal will

rectify this coverage anomaly by providing coverage of essentially the same area daytime and nighttime.

In response to the three points addressed in the Commission's letter:

1. The towers will be registered with the Commission upon receiving a Determination of No Hazard from the FAA, the results of which are still pending.
2. Site photographs are included as Figure 15B.
3. The interference has been eliminated with co-channel Mexican station XECL, Mexicali, BN, Mexico with a very slight modification in the operating parameters. As a result, the overall pattern remains essentially unchanged. The amended directional antenna specifications, horizontal plane pattern and tabulation appear in Figures 2B, 5B and 6B respectively.

All other aspects of the application remain unchanged.

RADIO STATION KATD  
PITTSBURG, CALIFORNIA

990 KHz 10 KW-D, 5.0 KW-N U DA-2

Specification for Daytime and  
Nighttime Directional Antenna Systems

Frequency: 990 kHz

Hours of Operation: Unlimited

Power: 10 kW (Day), 5.0 kW (Night)

Number of Towers: 4

Type of Tower: Guyed, Uniform Cross-section,  
base-insulated

All Towers - height above  
base insulator 72.0 m (236 ft)

All Towers - overall height 73.8 m (242 ft)

Tower Registration Numbers:

Tower No.	ASRN
1 (E)	Pending
2 (C)	Pending
3 (W)	Pending
4 (N)	Pending

Tower Arrangement:

Tower No.	Spacing (deg.) / (m)	Orientation (deg. True)
1 (E)	0/0	0
2 (C)	90.0/75.8	251.0
3 (W)	169.0/142.3	255.9
4 (N)	138.9/116.9	290.5

**Figure 2B**  
**Sheet 2 of 2**

Element Field Parameters:

Daytime:

Tower No.	Field Ratio	Phase (degrees)
1 (E)	1.000	0.0
2 (C)	0.646	-99.4
4 (N)	2.005	-104.8

Nighttime:

Tower No.	Field Ratio	Phase (degrees)
1 (E)	1.000	+0.0
2 (C)	2.115	-125.2
3 (W)	1.110	+99.2

Ground System:

Installed about the base of each tower are 120 evenly spaced, buried copper wire radials (#10 AWG), extending 75.6 meters (249 ft) from all towers except where shortened and bonded to transverse copper strap between towers. In addition, copper strap runs from the transmitter and down the line of towers and is bonded to ground at the base of each tower.

Geographic Coordinates of  
Center of Antenna Array:

38° 30' 17" North Latitude  
121° 10' 48" West Longitude
