Box N-210—Rick Hutchinson Papers

Roderick A. "Rick" Hutchinson worked in Yellowstone National Park beginning in 1970 and served as the park's geologist from 1973 until 1997, when he was killed in an avalanche near Factory Hill in the Heart Lake area. As one of the foremost experts on Yellowstone's thermal features, Hutchinson's records and accumulated papers are a very important source for researchers.

Box N-419—Records from Rick Hutchinson, park geologist

Park Geothermal Geologist Roderick A. "Rick" Hutchinson worked in Yellowstone National Park beginning in 1970 and served as the park's geologist from 1973 until 1997, when he was killed in an avalanche near Factory Hill in the Heart Lake area. As one of the foremost experts on Yellowstone's thermal features, Hutchinson's records and accumulated papers are a very important source for researchers.

The bulk of the records concern the observation, inventorying, monitoring, and research of the park's thermal features. Other geological topics are also covered, particularly seismicity. The majority of the records are letters, memos, and reports to or from Hutchinson. Reports and correspondence are also to/from Donald White, Terry Keith, Susan Kieffer, Ron Keam, Dan Norton, George Marler, Laura Marler, B. Riley McClelland, Robert Fournier, A. M. Pitt, John Rinehart, Irving Friedman, Mike Thompson, Robert Corwin, T. Scott Bryan, Daniel Norton, Robert Christiansen, and various park staff members. The records span Hutchinson's years in the park, 1970-1997. Some earlier thermal and geological records are also included, dating back to 1953.
