SCENARIO - COUNTY HEALTH DEPARTMENT

The County Health Department in Angelina County, Texas, is working closely with the Local Emergency Planning Council (LEPC) and with the Community Hospital and the County Fire Department to develop procedures for handling chemical emergencies. The County Health Department is spearheading the effort to develop emergency preparedness plans for chemical disasters. The official in charge of the County Health Department searches the TRI (Toxic Chemical Research Inventory) file on TOXNET for a listing of facilities and chemicals reported to EPA for Angelina County in Texas. The search identifies 14 facilities in the county reporting on 25 distinct chemicals.

The list of 25 chemicals is turned over to the emergency medical staff of the Angelina Community Hospital to develop protocols for handling exposure victims to these chemicals. Hospital staff will conduct searches on other NLM databases, as necessary, and will consult wit the Texas Poison Control Center in developing emergency treatment plans.

The list of 14 facilities is given to the newly-formed HazMat team of the County Fire Department so that onsite interviews and inspections can be conducted at the plant sites. The HazMat team can also identify other chemicals in use at these 14 facilities and may also learn about additional facilities within the county that can be registered with the Fire Department.
