

Attachment C

Simulation Projections of Effectiveness Charts

Results of the alternative simulations are presented in attachment C.

Table of Contents

Figure	Page
C-1 No Action Alternative salinity concentrations at 1.363, 1.063, and 0.80 million acre-feet per year of inflow	C-1
C-2 No Action Alternative elevations at 1.363, 1.06, and 0.80 million acre-feet per year of inflow	C-2
C-3 No Action Alternative area at 1.363, 1.063, and 0.80 million acre-feet per year of inflow	C-3
C-4 Comparison of salinity among the alternatives at 1.363 million acre-feet per year of inflow	C-4
C-5 Comparison of elevation among the alternatives at 1.363 million acre-feet per year of inflow	C-5
C-6 Comparison of area among the alternatives at 1.363 million acre-feet per year of inflow	C-6
C-7 Comparison of salinity among the alternatives at 1.063 million acre-feet per year of inflow	C-7
C-8 Comparison of elevation among the alternatives at 1.063 million acre-feet per year of inflow	C-8
C-9 Comparison of area among the alternatives at 1.063 million acre-feet per year of inflow	C-9
C-10 Comparison of salinity among the alternatives at 0.80 million acre-feet per year of inflow	C-10
C-11 Comparison of elevation among the alternatives at 0.80 million acre-feet per year of inflow	C-11
C-12 Comparison of area among the alternatives at 0.80 million acre-feet per year of inflow	C-12
<i>Phase 2</i>	
C-13 Phase 1 salinity at 1.363 million acre-feet per year of inflow if phase 2 is not implemented	C-13
C-14 Phase 1 elevation at 1.363 million acre-feet per year of inflow if phase 2 is not implemented	C-14
C-15 Phase 1 area at 1.363 million acre-feet per year of inflow if phase 2 is not implemented	C-15
C-16 Phase 1 salinity at 1.063 million acre-feet per year of inflow if phase 2 is not implemented	C-16
C-17 Phase 1 elevation at 1.063 million acre-feet per year of inflow if phase 2 is not implemented	C-17
C-18 Phase 1 area at 1.063 million acre-feet per year of inflow if phase 2 is not implemented	C-18

1.063 maf

0.80 maf

Figure C-3.—No Action Alternative area at 1.363, 1.063 and 0.80 million acre-feet per year of inflow.

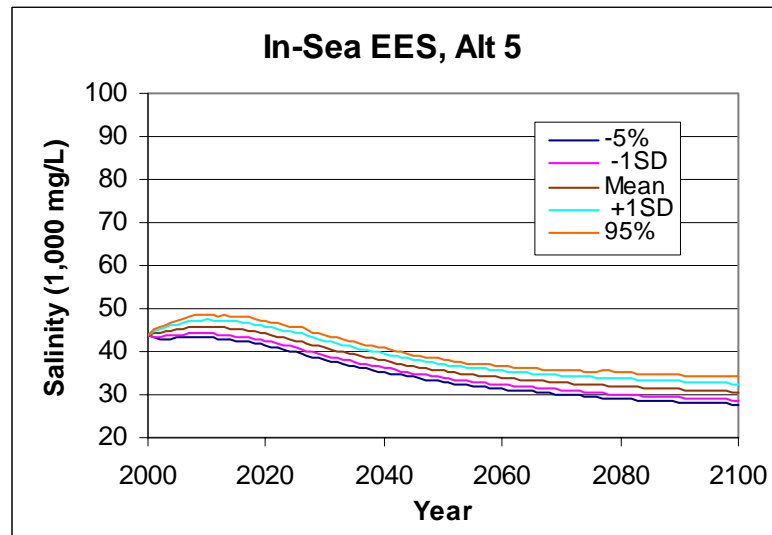

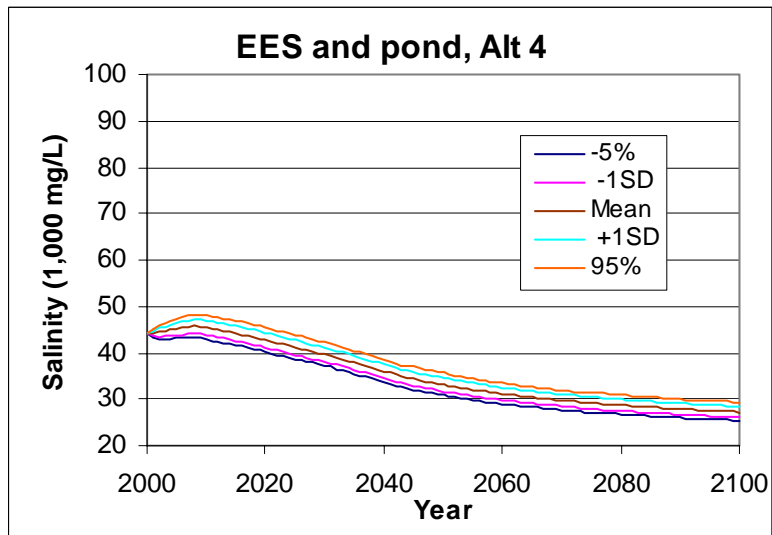

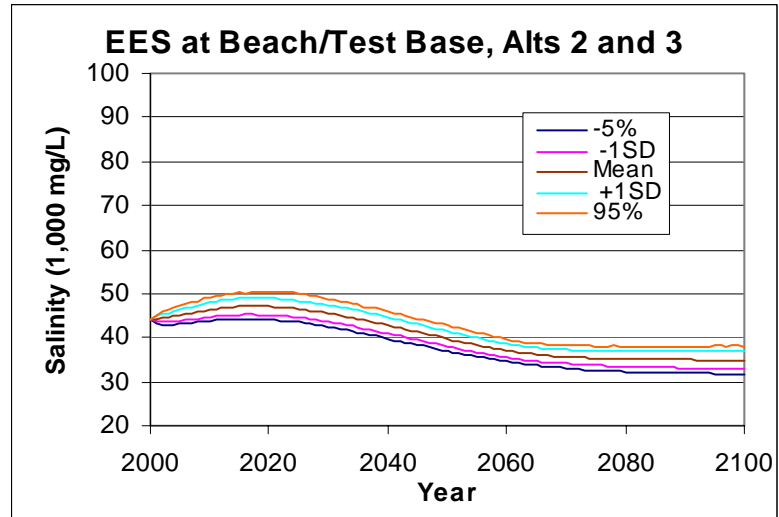

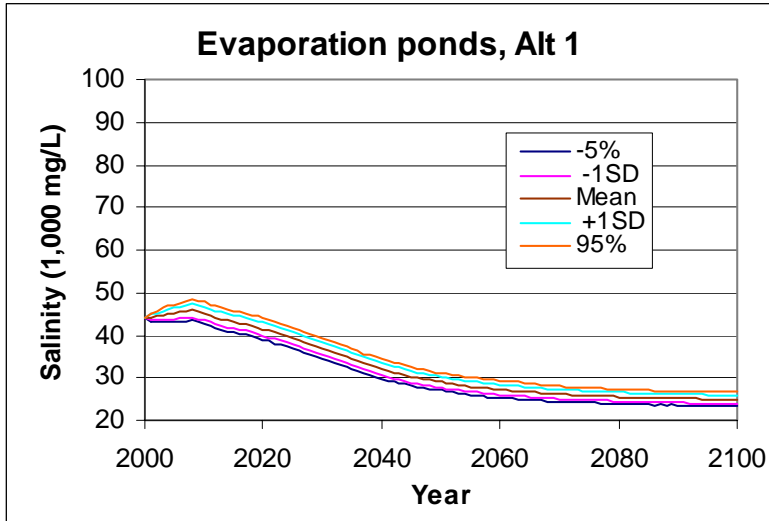

Figure C-4.—Comparison of salinity among the alternatives at 1.363 million acre-feet per year of inflow.

Figure C-5.—Comparison of elevation among the alternatives at 1.363 million acre-feet per year of inflow.

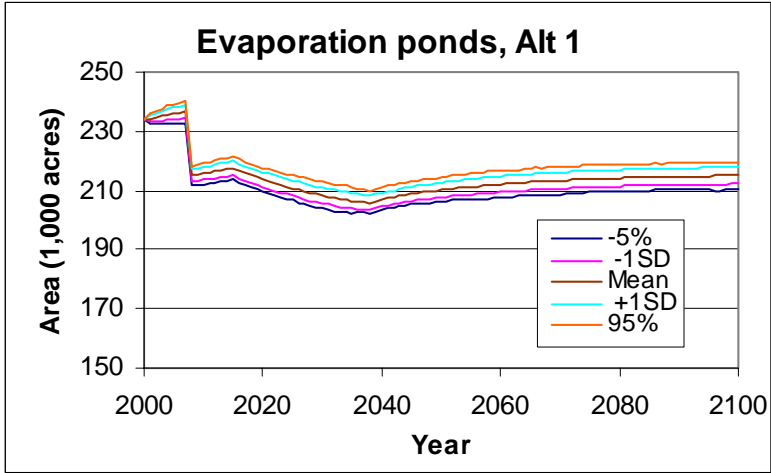

Figure C-6.—Comparison of area among the alternatives at 1.363 million acre-feet per year of inflow.

Figure C-7.—Comparison of salinity among the alternatives at 1.063 million acre-feet per year of inflow.

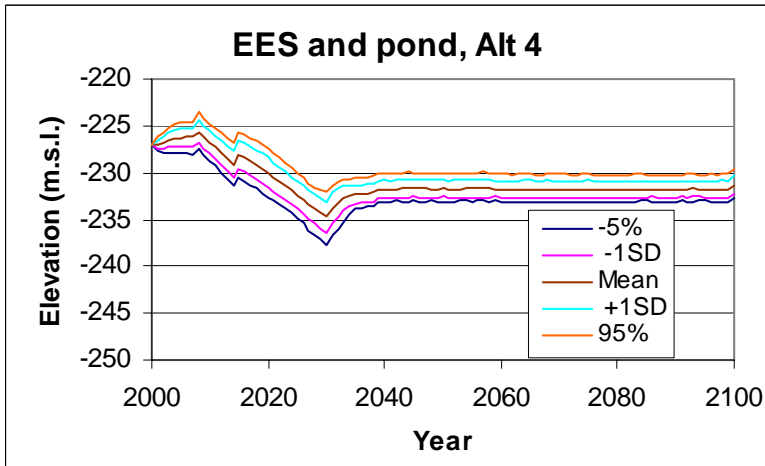

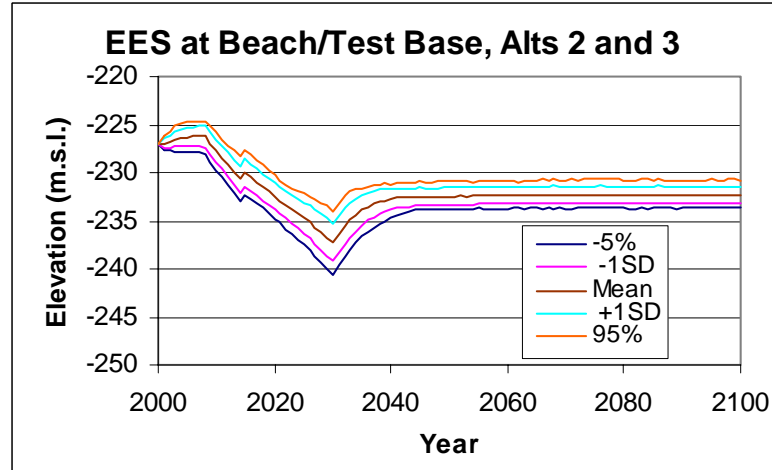

Figure C-8.—Comparison of elevation among the alternatives at 1.063 million acre-feet per year of inflow.

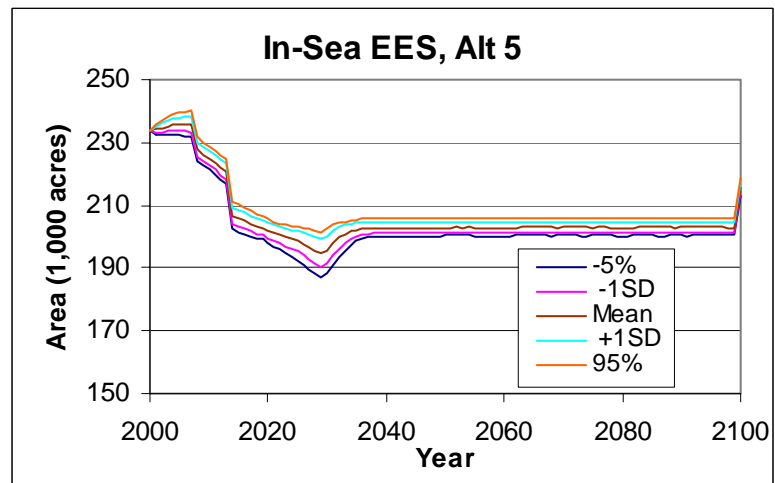

Figure C-9.—Comparison of area among the alternatives at 1.063 million acre-feet per year of inflow.

Figure C-10.—Comparison of salinity among the alternatives at 0.80 million acre-feet per year of inflow.

Figure C-11.—Comparison of elevation at 0.80 million acre-feet per year of inflow.

Figure C-12.—Comparison of area among the alternatives at 0.80 million acre-feet per year of inflow.

Figure C-13.—Phase 1 salinity at 1.363 million acre-feet per year of inflow if phase 2 is not implemented. There is no phase 2 actions for Alternative 2.

Figure C-14.—Phase 1 elevation at 1.363 million acre-feet per year of inflow if phase 2 is not implemented. There is no phase 2 actions for Alternative 2.

Figure C-15.—Phase 1 area at 1.363 million acre-feet per year of inflow if phase 2 is not implemented. There is no phase 2 actions for Alternative 2. Model will not operate above -220 elevation.

Figure C-16.—Phase 1 salinity at 1.063 million acre-feet per year of inflow if phase 2 is not implemented.

Figure C-17.—Phase 1 elevation at 1.063 million acre-feet per year of inflow if phase 2 is not implemented.

Figure C-18.—Phase 1 area at 1.063 million acre-feet per year of inflow if phase 2 is not implemented

Figure C-19.— Phase 1 salinity at 0.80 million acre-feet per year of inflow if phase 2 is not implemented.

Figure C-20.—Phase 1 elevation at 0.80 million acre-feet per year of inflow if phase 2 is not implemented.

Figure C-21.—Phase 1 area at 0.80 million acre-feet per year of inflow if phase 2 is not implemented.
