Descriptive Report
to accompany Top^c Sheet N^o 2044, part of
Connecticut River, Conn.

— " —

1. This is a survey of the shore line of the Connecticut River from Cromwell Landing northward, with some marginal topography.

The outline is that of a river bank, mostly in meadow land but occasionally skirting the foot of a hill.

6. There are some broken banks of drift, where the river has cut into the hill slope beyond the angle of repose or where the railroad has scarred a hill side.

According to the title on the sheet the topography was done by Assistant W. J. Vinal, who presumably would be better able to describe it.

W. C. Hodgkins
Chief of Party.
