Status: DØ code/SAM Installation in Munich

- Installation of DØreleases via upd/ups

- SAM station Munich running since beginning of April

- So far only small test-setup:
  - Desktop PC: P4, 1.6GHz, Linux RH 7.2 (modified)
    * behind Firewall (generated lots of problems)
  - only 9.6 GB SAM-cache at the moment (have access to multiple TB RAID server for *real* setup)

- stand-alone usage of bbftp for transfer of streamed root-tuple to Munich (up to 800 KB/s)

- Problems related to Firewall configuration (+ others):
  - technical issues (all solved!)
  - upd:
    * disabling ftp proxies and using passive mode (`FTP_PASSIVE=1`) necessary
  - SAM:
  - `/etc/hosts` needs to be modified
  - Don't follow instructions to put bbftp authorization file in /tmp!
  - Firewall configuration:
    * open all TCP and UDP(!) ports $\geq$ 1024 for d0mino and d0ora[1,3,4]
