SUPPLEMENTARY INFORMATION:

Background

Restoring endangered or threatened animals and plants to the point where they are again secure, self-sustaining members of their ecosystems is a primary goal of the Fish and Wildlife Service's threatened and endangered species program. To help guide the recovery effort, the Service prepares recovery plans for most of the listed species native to the United States. Recovery plans describe actions that may be necessary for conservation of these species, establish criteria for the recovery levels for reclassification from endangered to threatened status or removal from the list, and estimate the time and cost for implementing the needed recovery measures.

The Endangered Species Act of 1973 (Act), as amended (16 U.S.C. *et seq.*) requires the development of recovery plans for listed species unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act requires that public notice and an opportunity for public review and comment be provided during the recovery plan development. The Service will consider all information presented during a public comment period prior to approval of each new or revised recovery plan. The Service and other Federal agencies will take these comments into account in the course of implementing approved recovery plans.

The Multi-Species Recovery Plan identifies the recovery and restoration needs of 68 threatened and endangered

species and their habitats in the South Florida Ecosystem, an area encompassing 67,346 square kilometers covering the 19 southernmost counties in Florida, using an ecosystem-wide approach. This plan is a two-volume effort to identify recovery needs of the species of South Florida and the ecosystems upon which they depend. The focus of Volume I is the individual species, while Volume II integrates the species needs with those of the ecological communities in which they reside.

Paper copies of both volumes of the draft recovery plan are available for public inspection at the following locations:
